A unique blend of espionage
thrills and Lovecraftian horror,
Hugo Award-winning author
Charles Stross's Laundry Files
continues with Quantum of
Nightmares. It's a brave new

Britain under the New
Management. The avuncular
Prime Minister is an ancient
eldritch god of unimaginable
power. Crime is plummeting as
almost every offense is
punishable by death. And
everywhere you look, there are
people with strange powers,
some of which they can control,
and some, not so much.

Hyperorganized and
formidable, Eve Starkey
defeated her boss, the louche
magical adept and billionaire
Rupert de Montfort Bigge, in a
supernatural duel to the death.
Now she's in charge of the
Bigge Corporation—just in time

to discover the lethal trap
Rupert set for her long ago.
Wendy Deere's transhuman
abilities have gotten her
through many a scrape. Now
she's gainfully employed
investigating unauthorized
supernatural shenanigans. She
swore to herself she wouldn't
again get entangled with Eve
Starkey's bohemian brother
Imp and his crew of
transhuman misfits. Yeah,
right. Mary Macandless has
powers of her own. Right now
she's pretending to be a nanny
in order to kidnap the children
of a pair of famous,
Government-authorized

superheroes. These children have powers of their own, and Mary Macandless is in way over her head. Amanda Sullivan is the HR manager of a minor grocery chain, much oppressed by her glossy blonde boss—who is cooking up an appalling, extralegal scheme literally involving human flesh. All of these stories will come together, with world-bending results... "For all of Stross's genuine ability to spook and dismay, *The Laundry Files* are some of the most tremendously humane books I've ever read." —Tamsyn Muir, author of *Gideon the Ninth* and *Harrow*

the Ninth At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

From the late 1940s to the mid-1970s, Richard Nixon was a polarizing figure in American politics, admired for his intelligence, savvy, and strategic skill, and reviled for his shady manner and cutthroat tactics. Conrad Black, whose epic biography of FDR was widely acclaimed as a masterpiece, now separates the good in Nixon—his foreign initiatives, some of his

domestic policies, and his firm political hand—from the sinister, in a book likely to generate enormous attention and controversy. Black believes the hounding of Nixon from office was partly political retribution from a lifetime's worth of enemies and Nixon's misplaced loyalty to unworthy subordinates, and not clearly the consequence of crimes in which he participated. Conrad Black's own recent legal travails, though hardly comparable, have undoubtedly given him an unusual insight into the pressures faced by Nixon in his last two years as president and the first few years of his retirement.

Strategic Management

Butterworth-Heinemann

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more

less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be

well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for

next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards. *Standard Catalog of Independents* W G Nichols Pub Provides solutions, insights, and guidance on problems caused by

Analysis Tordotcom*

With the changing landscape of the transport sector, there are also alternative powertrain systems on offer that can run independently of or in conjunction with the internal combustion (IC) engine. This shift has actually helped the industry gain traction with the IC Engine market projected to grow at 4.67% CAGR during the forecast period 2019-2025. It continues to meet both requirements and challenges through continual

technology advancement and innovation from the latest research. With this in mind, the contributions in Internal Combustion Engines and Powertrain Systems for Future Transport 2019 not only cover the particular issues for the IC engine market but also reflect the impact of alternative powertrains on the propulsion industry. The main topics include: • Engines for hybrid powertrains and electrification • IC engines • Fuel cells • E-machines • Air-

path and other technologies achieving performance and fuel economy benefits • Advances and improvements in combustion and ignition systems • Emissions regulation and their control by engine and after-treatment • Developments in real-world driving cycles • Advanced boosting systems • Connected powertrains (AI) • Electrification opportunities • Energy conversion and recovery systems • Modified or novel engine cycles • IC engines for heavy duty and off

highway Internal Combustion Engines and Powertrain Systems for Future Transport 2019 provides a forum for IC engine, fuels and powertrain experts, and looks closely at developments in powertrain technology required to meet the demands of the low carbon economy and global competition in all sectors of the transportation, off-highway and stationary power industries.

With a foreword by shaman Christina Pratt, in the revised second edition of this

bestselling fantastical memoir, Kelley Harrell chronicles a modern shamanic journey from pain, to healing and accepting a calling to work as a soul healer of others. Groundbreaking at the time of its first publication in 2004, still no other modern shamanic work shares an experience of soul healing told from within the shamanic narrative, bringing relatable and credible insight to contemporary soul healing. Through that rare glimpse into her experiences traversing the spirit world, Harrell's story becomes the reader's adventure. Not always easy to

read, there are unflinching passages examining hurtful childhood memories, confrontations with overzealous spirit guides, and challenging personal obstacles she must overcome in order to heal.
