"And everywhere the Humans went, they found life ..." This dazzling future history, winner of the 2000 Philip K. Dick Award, is the most ambitious and exciting since Asimov's classic Foundation saga. It tells the story of Humankind -- all the way to the end of the Universe itself. Here, in luminous and vivid narratives spanning five million years, are the first Poole wormholes spanning the solar system; the conquest of Human planets by

Squeem; GUTships that outrace light; the back-time invasion of the Qax; the mystery and legacy of the Xeelee, and their artifacts as large as small galaxies; photino birds and Dark Matter; and the Ring, where Ghost, Human, and Xeelee contemplate the awesome end of Time. Stephen Baxter is the most acclaimed and accomplished of a brilliant new generation of authors who are expanding the vision of science fiction and taking it to a new golden age.

With the resurgence of nuclear power around the world, and the increasingly important role of hydrogen as a clean energy carrier, the utilization of nuclear energy for large-scale hydrogen production will have a key role in a sustainable energy future. Co-generation of both electricity and hydrogen from nuclear plants will become increasingly attractive. It enables load leveling together with renewable energy and storage of electricity in the form of hydrogen, when electricity prices and demand are lowest at off-peak hours of nuclear plants, such as overnight. Hydrogen Production from Nuclear Energy provides an overview of the latest developments and methods of nuclear based hydrogen production, including electrolysis and thermochemical cycles. Particular focus is given to thermochemical water splitting by the copper-chlorine and sulphur-based cycles. Cycle configurations, equipment design, modeling and implementation issues are presented and discussed. The book provides the reader with an overview of the key enabling technologies towards the design and industrialization of hydrogen plants that are co-located and linked with nuclear plants in the future. The book includes illustrations of technology

developments, tables that summarize key features and results, overviews of recent advances and new methods of nuclear hydrogen production. The latest results from leading authorities in the fields will be presented, including efficiencies, costs, equipment design, and modeling.

Fruit Oils: Chemistry and Functionality presents a comprehensive overview of recent advances in the chemistry and functionality of lipid bioactive phytochemicals found in fruit oils. The chapters in this text examine the composition, physicochemical characteristics and organoleptic attributes of each of the major fruit oils. The nutritional quality, oxidative stability, and potential food and non-food applications of these oils are also extensively covered. The potential health benefits of the bioactive lipids found in these fruit oils are also a focus of this text. For each oil presented, the levels of omega-9, omega-6 and omega-3 fatty acids are specified, indicating the level of health-promoting traits exhibited in each. The oils and fats extracted from fruits generally differ from one another both in terms of their major and minor bioactive constituents. The methods used to extract oils and fats as well as the processing techniques such as refining, bleaching and deodorization affect their major and minor constituents. In addition, different post-processing treatments of fruit oils and fats may alter or degrade important bioactive constituents. Treatments such as heating, frying, cooking and storage and major constituents such as sterols and tocopherols are extensively covered in this text. Although there have been reference works published on the composition and biological properties of lipids from oilseeds, there is currently no book focused on the composition and functionality of fruit oils. Fruit Oils: Chemistry and Functionality aims to fill this gap for

researchers, presenting a detailed overview of the chemical makeup and functionality of all the important fruit oils.

Motor Vehicle Structures South Asia Books The Wet Tropics Management Authority and Biotropica Pty Ltd are delighted to present Repairing the Rainforest 2nd Edition, co-authored by Dr Steve Goosem and Nigel Tucker. The updated edition of the book maintains the essence of the hugely popular first edition published in 1995 by providing a practical guide to rainforest re-establishment whilst also delving into the principles behind the practice. Focusing primarily on the Wet Tropics region of Australia, Repairing the Rainforest highlights key ecological principles for restoring rainforest biodiversity and function. These include, among others, the vital role of animal seed-dispersers in rainforests and the traits of plants that help or hinder their dispersal. The book is a must for individuals and organisations involved in land care and rehabilitation of tropical forests. It is an informative hand book that provides valuable insight into the intriguing forests of the Wet Tropics and their successful restoration.

From the late 1940s to the mid-1970s, Richard Nixon was a polarizing figure in American politics, admired for his intelligence, savvy, and strategic skill, and reviled for his shady manner and cutthroat tactics. Conrad Black, whose epic biography of FDR was widely acclaimed as a masterpiece, now separates the good in Nixon—his foreign initiatives, some of his domestic policies, and his firm political hand—from the sinister, in a book likely to generate enormous attention and controversy. Black believes the hounding of Nixon from office was partly political retribution from a lifetime's worth of enemies and Nixon's misplaced loyalty to unworthy subordinates, and not clearly the consequence of crimes in which he participated. Conrad Black's own recent legal travails, though hardly comparable, have undoubtedly given him an unusual insight into the pressures faced by Nixon in his last two years as president and the first few years of his retirement.
