Bernard Rosner's **FUNDAMENTALS OF BIostatISTICS** is a practical introduction to the methods, techniques, and computation of statistics with human subjects. It prepares students for their future courses and careers by introducing the statistical methods most often used in medical literature. Rosner minimizes the amount of mathematical formulation (algebra-based) while still giving complete explanations of all the important concepts. As in previous editions, a major strength of this book is that every new concept is developed systematically through completely worked out examples from current medical research problems. Most methods are illustrated with specific instructions as to implementation using software either from SAS, Stata, R, Excel or Minitab. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook

version.

The new edition of this popular text has been extensively revised and updated throughout. It will continue to provide the trainee or practising anaesthetist with all the information, both background and practical, that will be needed in the busy clinical setting or during revision for qualifying examinations. Major changes for the new edition include increased international relevance, made possible by the extensive input of a new American co-editor and the selection of well known contributing authors from around the world. The content is thus applicable to all trainees studying for, and passing, the variety of different certifying examinations for practising anaesthesia in a wide range of locales. The book presents both the basic science underlying modern anaesthetic practice and up-to-date clinical anaesthetic management techniques in a comprehensive, but concise and accessible, style. Reviews are well

referenced throughout to guide the reader towards additional information beyond the scope of this text.

The book will continue to provide in a single volume all the information relevant to the physician in training, and serve as a convenient and reliable reference for the anaesthetist to use after training.
