In the 87 issues of Snow Country published between 1988 and 1999, the reader can find the defining coverage of mountain resorts, ski technique and equipment, racing, cross-country touring, and the growing sport of snowboarding during a period of radical change. The award-winning magazine of mountain

sports and living tracks the environmental impact of ski area development, and people moving to the mountains to work and live. Grain World Scholastic Inc.

Lola can't wait for it to snow. 'Snow is my favourite and my best,' she says. It snows all through the night and in the morning everything is extremely, completely white! Charlie and Lola play in the snowy park with their friends - they make snow angels, go sledging and Lola even makes a snow dog - just like Sizzles! But by the very next day all the snow has completely disappeared. Lola wishes it would snow every day, but Charlie compares snow to birthdays - they wouldn't be special if they happened every day. He takes Lola on an imaginary adventure to see penguins and polar bears living in their snowy homes and soon Lola realizes that it would be absolutely too cold to swim or wear her stripy party dress if it snowed all the time. Another

winning story that perfectly captures a child's anticipation of the first snow of winter.

Ray Society

Born in a two-room, tar-paper-covered house in the far north of Greenland, Marie Ahnighito Peary was destined to have an exciting childhood. Her parents, the famous explorer Robert E. Peary and Josephine Peary, had shocked Victorian society by starting their family so far away from "civilization." Fair-skinned children were so rare in the far North that the local Inuit called Marie "Snow Baby." Map, time line, bibliography, index. Seasonal Snowpacks examines the processes which control the chemistry of seasonal snowcover and provides detailed information on the biogeographical distribution of snow (e.g. urban, alpine snowpacks), snow composition (e.g. micropollutants, stable

isotopes) or the physical and biological processes which influence the chemical changes in snow (e.g. wind, microbiological activity). The fluxes of chemicals at the snow-atmosphere and snow-soil interfaces are examined, as are processes which modify composition within the snowcover. It is the first book in which the reader will find a comprehensive overview of the theoretical concepts, latest measurement techniques, process-oriented research methods, and models of studies in snow chemistry. The linkages between snow chemistry, atmospheric chemistry and hydrology will make this book of use to both research workers and students in the physical and biological sciences and to natural resource management personnel.
