NATIONAL BESTSELLER • “Steven Pressfield brings the battle of Thermopylae to brilliant life.”—Pat Conroy  
At Thermopylae, a rocky mountain pass in northern Greece, the feared and admired Spartan soldiers stood three hundred strong. Theirs was a suicide mission, to hold the pass against the invading millions of the mighty Persian army. Day after bloody day they withstood the terrible onslaught, buying time for the Greeks to rally their forces. Born into a cult of spiritual courage, physical endurance, and unmatched battle skill, the Spartans would be remembered for the greatest military stand in history—one that would not end until the rocks were awash with blood, leaving only one gravely injured Spartan squire to tell the tale. . . .

The global crisis the automotive industry has slipped into over the second half of 2008 has set a fierce spotlight not only on which cars are the right ones to bring to the market but also on how these cars are developed. Be it OEMs developing new models, suppliers integrating themselves deeper into the development processes of different OEMs, analysts estimating economical risks and opportunities of automotive investments, or even governments creating and evaluating scenarios for financial aid for suffering automotive companies: At the end of the day, it is absolutely indispensable to comprehensively understand the processes of automotive development – the core subject of this book. Let’s face it: More than a century after Carl Benz, Wilhelm Maybach and Gottlieb Daimler developed and produced their first motor vehicles, the overall concept of passenger cars has not changed much. Even though components have been considerably optimized since then, motor cars in the 21st century are still driven by combustion engines that transmit their propulsive power to the road surface via gearboxes, transmission shafts and wheels, which together with spring-damper units allow driving stability and ride comfort. Vehicles are still navigated by means of a steering wheel that turns the front wheels, and the required control elements are still located on a dashboard in front of the driver who operates the car sitting in a seat.

NIST’s Manufacturing Engineering Laboratory (MEL) is developing standards that promote interoperability among members of the U.S. automotive supply chain. This study assesses the costs of imperfect interoperability to the U.S. automotive supply chain and describes the sources of these costs. This study estimates that imperfect interoperability imposes at least \$1 billion per year on the members of the U.S. automotive supply chain. By far, the greatest component of these costs is the resources devoted to repairing or reentering data files that are not usable for downstream applications.

From the award-winning and bestselling author of Ghost Wars and Directorate S, an “extraordinary” and “monumental” exposé of Big Oil (The Washington Post) Includes a profile of current Secretary of State and former chairman and chief executive of ExxonMobil, Rex Tillerson In this, the first hard-hitting examination of ExxonMobil—the largest and most powerful private corporation in the United States—Steve Coll reveals the true extent of its power. Private Empire pulls back the curtain, tracking the corporation’s recent history and its central role on the world stage, beginning with the Exxon Valdez accident in 1989 and leading to the Deepwater Horizon oil spill in the Gulf of Mexico in 2010. The action spans the globe—featuring kidnapping cases, civil wars, and high-stakes struggles at the Kremlin—and the narrative is driven by larger-than-life characters, including corporate legend Lee “Iron Ass” Raymond, ExxonMobil’s chief executive until 2005, and current chairman and chief executive Rex Tillerson, President-elect Donald Trump’s nomination for Secretary of State. A penetrating, news-breaking study, Private Empire is a defining portrait of Big Oil in American politics and foreign policy.

Excerpt from Stories of the High Priests of Memphis: The Dethon of Herodotus and the Demotic Tales of Khamuas  
In spite of all that has been accomplished in demotic, there is much to be done that is almost of a pioneer character, and much that has been conjectured or con tested must be either established or overthrown by positive proofs. This is

the main apology for the voluminousness of the philological notes in Part II; though many of them are due chiefly to the bad writing or bad preservation of the second tale. I may here be allowed to express my great obligations to the authorities of the department of mss. In the British Museum for permission to publish the demotic text of the second story, and to the Delegates of the Clarendon Press for undertaking the serious expense of printing this book. My thanks are also especially due to the Rev. E. M. Walker, of Queen’s College, for encouragement and advice; the Provost of Queen’s College, Oxford, for introducing and supporting my application to the Delegates of the Clarendon Press; Mr. Cannan, the Secretary of the Delegates; Mr. Horace Hart, the Controller of the Press; and last, but not least, Mr. F. G. Kenyon of the British Museum, by whose kindness I was amongst the first to see the newly unrolled ‘papyrus DCIV,’ and enjoyed every facility for studying it. The particulars furnished by him in regard to the history of the papyrus and to the Greek text upon the recto will be found in a subsequent page. This description of the structure of Old Church Slavonic is intended to present fully the important data about the language, without citing all the minutiae of attested variant spellings. The facts have been treated from the point of view of structural linguistics, but pedagogical clarity has taken precedence over the conciseness required for elegant formal description.

CELLOPHANE HOUSE(tm) chronicles the design and execution of a five-story, off-site fabricated home assembled on-site in just sixteen days as part of The Museum of Modern Art exhibition, Home Delivery: Fabricating the Modern Dwelling. Through a series of questions, the book explores several of KieranTimberlake’s ongoing research agendas including speed of on-site assembly, design for disassembly, a holistic approach to the life cycle of materials, and the development of a lightweight, high-performance, energy gathering building envelope. Cellophane House(tm) takes a holistic approach to factory fabrication, reinventing the way a building is assembled, its materials, and spatial experience. An innovative aluminum frame enables mass-customization of the home in multiple configurations, rapid assembly, and adaptability to different sites and climates. Disassembly, rather than demolition, is inherent as an end-of-life option to successfully preserve the embodied energy in the recyclable house materials. More than a building experiment, it suggests a new way forward in an approach to mass housing. Cellophane House(tm) has received awards from several groups: the AIA Housing Committee, the AIA Technology Committee, Boston Society of Architects, the Chicago Athenaeum Museum of Architecture and Design, AIA Philadelphia and AIA Pennsylvania Chapters.
