In nine eventful years - 1957 to 1965 - the six-cylinder-engined Austin Healey evolved into a formidable and increasingly specialised rally car. By any standards, it was the first of the

"homologation specials" - a type made progressively stronger, faster, more versatile, and more suitable for the world's toughest International rallies. Though the motorsport foundations had been laid by the Healey Motor Co. Ltd, the work needed to turn these cars into rock-solid 210bhp projectiles was almost all completed by the world-famous "works" BMC Competitions Department at Abingdon. It was because of their vast experience that the "Big Healeys" as they were always affectionately known - became fast and tough, nimble yet durable, so that they were capable of winning major events wherever traction could be assured. Not only did the "works" Austin Healeys win some of the world's most famous events - including Liege-Sofia-Liege, Spa-Sofia-Liege and the French and Austrian Alpine rallies, but they were also supremely fast on events like the Tulip, and came so close, so often, to winning their home event, the British RAC Rally, which traditionally ended the season. Not only did these cars turn their drivers - Pat Moss, Donald Morley, Rauno Aaltonen, Timo Makinen and Paddy Hopkirk among them - into heroes, but individual cars seemed to take on a character and reputation of their own. This book lists each and every success, each and every notable car, and traces exactly how the machinery developed, and improved, from one season to the next. Over time, the "works" cars not only adopted aluminium cylinder heads and body panels, much-modified chassis, transmission and exhaust systems, but they also became supremely strong and could withstand a true battering on the world's toughest events. This book relates how the cars were improved by the engineers, how the drivers came to love their heavy and sometimes self-willed steeds, and how the management team got the most out of everything - machinery, personnel, drivers, and regulations. . Heavily illustrated and packed with technical detail this book will make a welcome addition to any motorsport fans library.

Machining is an essential part of high-performance engine building and stock rebuilding, as well as certain servicing procedures. Although you may not own the expensive tooling and machining to perform all or any of the machining required for a quality build, you need to understand the principles, procedures, and goals for machining, so you can guide the machining process when outsourced. Classic

and older engines typically require extensive machining and almost every major component of engine, including block, heads, intake, crankshaft, and pistons, require some sort of machining and fitment. A detailed, authoritative, and thorough automotive engine-machining guide for the hard-core enthusiast has not been available until now. Mike Mavrigian, editor of Engine Building Professional, walks you through each important machining procedure. A stock 300-hp engine build has far different requirements than a 1,000-hp drag race engine, and Mavrigian reveals the different machining procedures and plans according to application and engine design. The author also shows you how to inspect, measure, and evaluate components so you can provide astute guidance and make the best machine work choices. Machining procedures included are cylinder boring, align boring/honing, decking, valveseat cutting, cam tunnel boring, and a multitude of other services. In addition, multi-angle valve jobs, setting the valveseats, altering rocker arm ratio, re-conditioning connecting rods, and machining and matching valvetrain components are also covered. Whether you're an enthusiast engine builder or prospective machining student who wants to pursue a career as an automotive machinist, this book will provide insight and in-depth instruction for performing the most common and important machining procedures.
