The trillion-dollar markets for futures, swaps, commodity options, and related derivatives are extremely important to the global economy because, among other things, they influence the prices that people pay for everything from heating oil and bread to the interest rates connected to mortgages and student loans. Due to technological advances in automation and artificial intelligence, these markets have recently undergone a dramatic transformation away from human-centered trading and operations to control by high-speed automated systems. In this work, Gregory Scopino explains how such changes present challenges to the oversight of these markets and discusses potential ways for authorities to address issues presented by computerized trading and related systems. This book should be read by anyone interested in learning how artificial intelligence is used in the financial markets and how those markets are - and should be - regulated.

Porsche AG, today the most profitable car company in the world, was in 1975 a small but headstrong German automaker on the

verge of its most significant development. New national laws were changing the way manufacturers designed their products, but the auto consumer was also craving more exciting and innovative design. That innovation came in 1975 with the release of the revolutionary Porsche 924. This book begins its analysis with the creation of the Porsche 924 and the impact it made on the automotive world. During the 1980s, Porsche honed earlier 924 designs to create the 944 and its Turbo and convertible variants, and later the 968, completing a line that has produced some of the most respected sports cars of the modern era. The text also follows in detail the long production life and development of Porsche's V-8 powered high performance grand tourer, the 928--introduced in 1977, named the 1978 European Car of the Year and culminating in the 350 bhp 928 GTS of the 1990s. This history of the dynamic Porsche family gives a full account of each model and reveals the unique contributions each has made to a constantly evolving automotive world.

Classic texts by thinkers from Althusser to Žižek alongside essays by leaders in interaction design and HCI show the relevance of critical theory to interaction design. Why should interaction designers read critical theory? Critical theory is proving unexpectedly relevant to media and technology studies. The editors of this volume argue that reading critical theory—understood in the broadest sense, including but not limited to the Frankfurt School—can help designers do what they want to do; can teach wisdom itself; can provoke; and can introduce new ways of seeing. They illustrate their argument by presenting classic texts by thinkers in critical theory from Althusser to Žižek alongside essays in which leaders in interaction design and HCI describe the influence of the text on their work. For example, one contributor considers the relevance Umberto Eco's "Openness, Information, Communication" to digital content; another reads Walter Benjamin's "The Author as Producer" in terms of interface designers; and another reflects on the implications of Judith Butler's Gender Trouble for interaction design. The editors offer a substantive introduction that traces the various strands of critical theory. Taken together, the essays show how critical theory and interaction design can inform each other, and how interaction design, drawing on critical theory, might contribute to our deepest needs for connection, competency, self-esteem, and wellbeing. The Player Covid-19 has been described as a 'digital pandemic'. But who might the characterisation of the pandemic as 'digital' leave behind? This timely book reconsiders the pandemic as 'postdigital', examining tensions between a growing postdigital attitude of disenchantment with digital technologies and the increasing reliance on adapted modes of online practice mid-lockdown in both performance-making and healthcare. What emerged amidst the pandemic restrictions was a theatre that was unable to show its face, instead adapting into a variety of 'covid-safe' remote forms of engagement, from 'Zoom plays' to self-generating experiences sent by post. This book explores the ways that both performances and healthcare practices found proxies for direct touch and face-to-face encounters, deconstructing the way that care and resilience were spectacularized by political actors online. Liam Jarvis and Karen Savage explore aspects of care in relation to technology, spectacle and facilitation, and how new modes of delivery and the repurposing of theatre spaces that were displaced amidst the mass migration online have been enabling as well as controversial. The variety of case studies assessed includes internet memes, online films, performances of everyday resilience through social media and participatory theatre productions, including Thaddeus Phillips' Zoom Motel, Coney's Telephone and Nightcap's Handle with Care.

This four-volume set introduces, on the management side, principles and procedures of economics, budgeting and finance; leadership; governance; communication; business law and ethics; and human resources practices; all in the sports context. On the marketing side this reference resource explores two broad streams: marketing of sport and of sport-related products (promoting a particular team or selling team- and sport-related

merchandise, for example), and using sports as a platform for marketing non-sports products, such as celebrity endorsements of a particular brand of watch or the corporate sponsorship of a tennis tournament. Together, these four volumes offer a comprehensive and authoritative overview of the state of sports management and marketing today, providing an invaluable print or online resource for student researchers.
