About the Book Larry Rodenstein was on the top of his class, graduating Cum Laude in an accelerated prototype program while simultaneously earning both a bachelor's and master's of science degree in mechanical engineering, then going to work for Shell Oil. But an untreated bipolar condition led to a

psychotic break and sent him spiraling into a street alcoholic, enjoying the nightlife in New Orleans. Up and Down the Ivory Tower discusses the author's regression to a nervous breakdown and subsequently taking prescribed antipsychotics, which may have affected his genetic makeup and led to his son, Keith, being diagnosed with Autism Spectrum Disorder. When the child was diagnosed with ASD in 1995, the statistic was 1 in 10,000 children being diagnosed with ASD or .1% of births. The CDC is currently indicating that 1 in 44 births or 2.27% of children in 2022 are being born with ASD, a twenty-two-times increase in approximately twenty-six years. Larry Rodenstein states, "I've written this book to urge doctors to stop prescribing these antipsychotics. They are moderately affecting our gene pool. I recommend that the medical and health services community explore alternative holistic treatments." About the Author Larry Rodenstein works at Riverside Community Health. A psycho-social rehabilitation program for people who have had mental health issues integrating them back into the community via employment and/or education. He enjoys flying radio-frequency planes in his spare time.

The Just-in-time (JIT) manufacturing system is an internal system in use by its founder, Toyota Motor Corporation, but it has taken on a new look. *Toyota Production System, Second Edition* systematically describes the changes that have occurred to the most efficient production system in use today. Since the publication of the first edition of this book in 1983, Toyota has integrated JIT with computer integrated manufacturing technology and a strategic information system. The JIT goal of producing the necessary items in the necessary quantity at the necessary time is an internal driver of production and operations management. The addition of computer integrated technology (including expert systems by artificial intelligence) and information systems technology serve to

further reduce costs, increase quality, and improve lead time. The new Toyota production system considers how to adapt production schedules to the demand changes in the marketplace while satisfying the goals of low cost, high quality, and timely delivery. The first edition of this book, *Toyota Production System*, published in 1983, is the basis for this book. It was translated into many languages including Spanish, Russian, Italian, Japanese, etc., and has played a definite role in inspiring production management systems throughout the world.
