Spanning more than two centuries in Ireland, *Castle on the Rise* unites the legacy of three women who must risk mending their broken places for life, love, and the belief that even through the depths of our pain, a masterpiece of a story can emerge. When Laine Forrester travels overseas to attend her best friend's vineyard wedding, she expects to find the bride on the brink of a fairy-tale life. But after a series of unforeseen setbacks, it seems the storybook lives they'd imagined are suddenly ripping apart. With hopes of resurrecting a happy ending, Laine agrees to accompany the newlyweds to the groom's home in Ireland—never expecting she'd be the one drawn in by its wide-open moors, backroads bordering the Irish Sea, and a

mysterious castle that dares to keep its secrets hidden. From the storied streets of Dublin to the shores of the Emerald Isle, Laine is drawn in to the land and its rich history. The castle ruins whisper stories of Issy—a photojournalist battling through the 1916 Easter Rising, and Maeve—the castle's lady of legend, fighting for survival through the 1798 rebellion that started it all. Established in 1958 in response to Russia's Sputnik 1, launched on 4 October as the world's first artificial satellite, NASA - the National Aeronautics and Space Administration - emerged out of the National Advisory Committee for Aeronautics which had been formed in 1915. The NASA Operations Manual tells the story of America's civilian space agency, the facilities it operates, where they are and what they do. It explains how much NASA costs the American taxpayer and looks at what it returns to the taxpayer in benefits to the economy. NASA has forged a niche in modern history that extends beyond the realisation of age-old dreams to leave Earth and explore the heavens - it has become a synonym for achievement, performance and greatness, in setting goals and achieving them, in failing and learning how to recover, in connecting people

around the world with international programmes to explore our solar system and live our ambitions, and in improving the lives of people everywhere through its inventions, discoveries, its technology and its engineering. Sixty years after NASA took hold of the reins of US civilian space programmes, the agency has a bold vision for great and ambitious goals, taking humans back to the Moon and on to Mars, perhaps visiting an asteroid, or setting up an interplanetary transport system on the way. And all the time, providing inspiration for a new generation. With more than 300 photographs, line drawings and charts, this book tours the United States, describing the centres of excellence and the facilities where rockets are tested, satellites are built and humans prepare for space. With summary review of research laboratories, test rigs, experimental platforms and engineering facilities, this book describes the 60 years of NASA as it has evolved through changing requirements and expanding capabilities, building on the past and preparing for a bold future.

Isambard Kingdom Brunel's SS Great Britain was a world first when she was launched at Bristol in 1843. This uniquely successful passenger ship design brought together the leading technologies of the day (screw propeller, iron hull and 1,000hp steam engine) to transform world travel. She was a successful ship and continued sailing until 1886, travelling 32 times around the world and nearly one million miles at sea. Great Britain was finally abandoned in the Falkland Islands in 1937, but in 1970 an ambitious salvage effort brought her home to Bristol, where today she is conserved.

A unique Haynes Manual, providing fascinating technical insight into the development and use of rocket planes, focusing on the iconic X-15, which carried out much of the development work for the Apollo and Space Shuttle space programmes. As of July 2015, the X-15 still holds the world record for the highest speed ever attained by a manned aircraft, at 4,520mph (Mach 6.72)! The X-15 was flown by a band of elite test pilots, including the first man to walk on the Moon, Neil Armstrong. The X-15 made 199 flights between 1959 and 1968, several of which were above the line considered to be the arbitrary altitude where space begins. The engaging text, extensively illustrated with period photographs and technical illustrations, explains how the vehicle worked, what it pioneered for future applications in more conventional aircraft and manned spacecraft developed by NASA from 1958, and what it was like to fly.
