Most textbooks that deal with the power analysis of electrical engineering power systems focus on generation or distribution systems. Filling a gap in the literature, Modern Power System Analysis, Second Edition introduces readers to electric power systems, with an emphasis on key topics in modern power transmission engineering.

Throughout, the book familiarizes readers with concepts and issues relevant to the power utility industry. A Classroom-Tested Power Engineering Text That Focuses on Power Transmission Drawing on the author's industry experience and more than 42 years teaching courses in electrical machines and electric power engineering, this book explains the material clearly and in sufficient detail, supported by extensive numerical examples and illustrations. New terms are defined when they are first introduced, and a wealth of end-of-chapter problems reinforce the

information presented in each chapter. Topics covered include: Power system planning Transmission line parameters and the steady-state performance of transmission lines Disturbance of system components Symmetrical components and sequence impedances Analysis of balanced and unbalanced faults—including shunt, series, and simultaneous faults Transmission line protection Load-flow analysis Designed for senior undergraduate and graduate students as a two-semester or condensed one-semester text, this classroom-tested

book can also be used for self-study. In addition, the detailed explanations and useful appendices make this updated second edition a handy reference for practicing power engineers in the electrical power utility industry. What's New in This Edition 35 percent new material Updated and expanded material throughout Topics on transmission line structure and equipment Coverage of overhead and underground power transmission Expanded discussion and examples on power flow and substation design Extended impedance tables and expanded

coverage of per unit systems in the appendices New appendix containing additional solved problems using MATLAB® New glossary of modern power system analysis terminology

From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns have

not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to

environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be

operated without loss of life and loss of habitat. Yamaha Service Manual CRC Press This is the leading text on shipbuilding and marine construction, already widely used on a global basis by shipowners, shipbuilders and their commercial and legal advisers. It is now ten years since the last edition and much has changed in the world of shipbuilding since then, particularly in the period since 2008 which has seen numerous attempts by owners to renegotiate the prices and/or delivery dates of tonnage and an

enormous increase in the level of “ vessel rejection ” and cancellation disputes. The Law of Shipbuilding Contracts examines the principles of English contract law as these apply to shipbuilding. This edition comments in detail upon the Shipbuilders ’ Association of Japan Form but now contrasts this with the NEWBUILDCON from BIMCO in 2007 and the China Maritime Arbitration Commission Forms from 2011 where these are significantly different. It also includes sections dealing with

agreements ancillary to the shipbuilding contract and conversion contracts. Overview of book: Since the last edition in 2002, China has become a major global exporter of newbuildings and new BIMCO shipbuilding contract form has been published. Although retaining the original format of commentary on the Japanese (SAJ) standard form shipbuilding contract, the new edition contrasts this with the BIMCO form and the recently published China Maritime Arbitration Commission (CMAC) form in

order to provide a broad ranging analysis of this complex subject. The book details the principles of English contract law as these apply to international shipbuilding. It will, as in the previous editions, also include sections dealing with the guarantees and other agreements which support the shipbuilding contract and with ship conversion contracts Essential reading for: - Purchasers and charterers of newbuilding tonnage - Shipbuilders and offshore construction yards - Lawyers and insurers working in

the maritime and offshore oil and gas sectors - Banks and other finance providers

Advancements in boats, tackle, and equipment, as well as changes in the attitudes and ethics of shark fishermen, have revolutionized recreational sharking. Modern Sharking is about sustainable shark fishing, and in this book, anglers will learn the latest techniques for pursuing sharks while armed with rods, reels, and a higher level of

knowledge and respect for their quarry. For more than three decades, Captain Mark Sampson stood watch over chum lines, ran shark tournaments, worked with biologists, chased IGFA records, and guided thousands of clients to unique shark encounters. Now Captain, he shares the knowledge and experience that allowed him to guide friends and clients to 17 IGFA world records for sharks. In Modern Sharking, Sampson examines how to chum, rig for, bait, hook,

land, clean, cook, or release 20 species of sharks you'll most likely encounter. If you want to challenge one of the strongest, fastest, most exciting creatures on planet Earth, then Modern Sharking is for you.

The World Health Organization 's recently published Global Report on Drowning found that drowning is the third leading cause of

unintentional injury death worldwide—making the information presented in this new book an important part of the global effort to reduce this health risk. Written by leading researchers and academics from around the world, *The Science of Beach Lifeguarding* focuses on the scientific evidence that underpins what is taught and practised by beach lifeguards. It is the first book to pull together all the different areas involved in beach lifeguarding and evaluate their

evidence base. An accessible and informative reference underpinned by the best current research, the book 's key themes cover the context of beach lifeguarding, the physical environment in which lifeguards work, medical aspects, practical lifeguarding techniques, physiological standards for lifeguards, safety education, and future developments in beach lifeguarding. The book presents groundbreaking work quantifying

the scientific rationale behind a universally accepted fitness standard. It supplies an in-depth examination of the risks and hazards associated with the beach environment, including rip currents and cold water immersion. The book includes a state-of-the-art review of drowning and a comprehensive chapter on first aid. Detailing the recently announced 2015 European Resuscitation Council Guidelines, this book is a must-

have for beach lifeguards, beach lifeguard managers, search and rescue personnel, paramedics, sports scientists, health and safety practitioners, and occupational health practitioners.
