Fundamentals of Cryptology OUP Oxford

The protection of sensitive information against unauthorized access or fraudulent changes has been of prime concern throughout the centuries. Modern communication techniques, using computers connected through networks, make all data even more vulnerable for these threats. Also, new issues have come up that were not relevant before, e. g. how to add a (digital) signature to an electronic document in such a way that the signer can not deny later on that the document was signed by him/her.

Cryptology addresses the above issues. It is at the foundation of all information security. The techniques employed to this end have become increasingly mathematical of nature. This book serves as an introduction to modern cryptographic methods. After a brief survey of classical cryptosystems, it concentrates on three main areas. First of all, stream ciphers and block ciphers are discussed. These systems have extremely fast implementations, but sender and receiver have to share a secret key. Public key cryptosystems (the second main area) make it possible to protect data without a prearranged key. Their security is based on intractable mathematical problems, like the factorization of large numbers.

The remaining chapters cover a variety of topics, such as zero-knowledge proofs, secret sharing schemes and authentication codes. Two appendices explain all mathematical prerequisites in great detail. One is on elementary number theory (Euclid's Algorithm, the Chinese Remainder Theorem, quadratic residues, inversion formulas, and continued fractions). The other appendix gives a thorough introduction to finite fields and their algebraic structure.

The purpose of this book is to find a unified approach to the doctrine of mens rea in the sphere of international criminal law, based on an in-depth comparative analysis of different legal systems and the jurisprudence of international criminal tribunals since Nuremberg. Part I examines the concept of mens rea in common and continental legal systems, as well as its counterpart in Islamic Shari'a law. Part II looks at the jurisprudence of the post-Second World War trials, the work of the International Law Commission and the concept of genocidal intent in light of the travaux préparatoires of the 1948 Genocide Convention. Further chapters are devoted to a discussion of the boundaries of mens rea in the jurisprudence of the International Criminal Tribunals for the former Yugoslavia and Rwanda. The final chapter examines the definition of the mental element as provided for in Article 30 of the Statute of the International Criminal Court in light of the recent decisions delivered by the International Criminal Court. The study also examines the general principles that underlie the various approaches to the mental elements of crimes as well as the subjective element required in perpetration and participation in crimes and the interrelation between mistake of law and mistake of fact with the subjective element. With a Foreword by Professor William Schabas and an Epilogue by Professor Roger Clark From the Foreword by William Schabas Mohamed Elewa Badar has taken this complex landscape of mens rea at the international level and prepared a thorough, well-structured monograph. This book is destined to become an indispensable tool for lawyers and judges at the international tribunals. From the Epilogue by Professor Roger Clark This is the most comprehensive effort I have encountered pulling together across legal systems the 'general part' themes, especially about the 'mental element', found in confusing array in the common law, the civil law and Islamic law. In this endeavour, Dr Badar's researches have much to offer us.

Richard Finn OP examines the significance of almsgiving in Churches of the later empire for the identity and status of the bishops, ascetics, and lay people who undertook practices which differed in kind and context from the almsgiving practised by pagans. It reveals how the almsgiving crucial in constructing the bishop's standing was a co-operative task where honour was shared but which exposed the bishop to criticism and rivalry. Finn details how practices gained meaning from a discourse which recast traditional virtues of generosity and justice to render almsgiving a benefaction and source of honour, and how this pattern of thought and conduct interacted with classical patterns to generate controversy. He argues that co-operation and competition in Christian almsgiving, together with the continued existence of traditional euergetism, meant that, contrary to the views of recent scholars, Christian alms did not turn bishops into the supreme patrons of their cities.
