How do school communities create environments that fully prepare both English learners and dual-language learners for colleges and careers? This valuable book profiles six high-performing high schools that had a singular focus on improving the educational outcomes of English learners. The authors use

these case studies to identify a comprehensive set of design elements and shared values that were key factors in yielding extraordinary results. These include a school-wide language development framework that integrates content, analytical practices, and language learning; a broad and dynamic view of assessment practices; intensive social-emotional support for students and their families; and mission-driven staff and leadership that maximize learning

opportunities across classrooms. The practices employed in these schools are not only essential for English learners' success but, as the performance data shows, they also benefit all students. " This is my kind of change book: clear and deep; causes one to think; and inspires the reader to what may be possible on a wide scale. " —From the foreword by Michael Fullan, professor emeritus, University of Toronto " The schools featured in this set of beautifully drawn

case studies reveal how they managed to beat the odds for their students—and there is much to learn by looking closely at what made them so effective. " —Lilly Wong Fillmore, professor, University of California, Berkeley " This book is a rich resource for all educators driven to ensure that all multilingual learners are ready for college and career. With the 1989 release of Everybody Counts by the Mathematical Sciences Education Board (MSEB) of the National Research Council and the Curriculum and Evaluation Standards for School Mathematics by the National Council of Teachers of Mathematics (NCTM), the "standards movement" in K-12 education was launched. By the time Lindsey Blass and Cate Tolnai's paths crossed, they each knew their own "why" for leveraging the power of gameplay in learning. Both had taken a path from teacher to coach to central/county office roles focused on innovative learning design, all while noticing three trends that extended beyond their classrooms: students who weren't able to own

and connect to their learning experience became disengaged; there was a general fear of failure among students and teachers; and teachers were perplexed at how to design engaging learning experiences that fostered student choice and celebrated failure as an opportunity for iteration. Together, they began to ask ... what if? What if we designed learning experiences that leveraged the power of gameplay to create more motivated learners? What if we modeled this type of learning with educators so they could experience the impact firsthand and spread the

excitement and innovation in their classrooms? What if learning was fun for both students and teachers? With a uniquely engaging style, *Power Up Your Classroom* helps educators understand the benefits of gamification and game-based learning, and empowers them to design learning experiences that leverage gameplay to increase motivation and engagement, and build classroom community.

The Social Contract -- Rousseau's famous term concerning the bond between a government and its people -- has been sold to the highest bidder. Freedom is reserved only for markets in a society increasingly strangled by corporate power. Empowerment is the new definition of destitution. By looking at the

struggles of the disabled faced with the end of social services, Ending the Social Contract as We Know It provides a powerful warning: the disabled are as canaries in a coal mine, and their maltreatment is a harbinger of things to come for the rest of us. In a tightly woven argument, Marta Russell shows how the onslaught of corporate power facing the disabled -- from issues like genetic screening, to restricted access to health care, to welfare reform -- will shortly be faced by a much broader segment of

society.

A provocative new novel from

bestselling author T.C. Boyle exploring the first scientific and recreational forays into LSD and its mind-altering possibilities In this stirring and insightful novel, T.C. Boyle takes us back to the 1960s and to the early days of a drug whose effects have reverberated widely throughout our culture: LSD. In 1943, LSD is synthesized in Basel. Two decades later, a coterie of grad students at Harvard are gradually drawn into the inner circle of renowned psychologist and psychedelic drug enthusiast Timothy Leary. Fitzhugh Loney, a psychology Ph.D. student and his

wife, Joanie, become entranced by the drug's possibilities such that their "research" becomes less a matter of clinical trials and academic papers and instead turns into a free-wheeling exploration of mind expansion, group dynamics, and communal living. With his trademark humor and pathos, Boyle moves us through the Loneys' initiation at one of Leary's parties to his notorious summer seminars in Zihuatanejo until the Loneys' eventual expulsion from Harvard and their introduction to a communal arrangement of thirty

devotees—students, wives, and children—living together in a sixty-four room mansion and devoting themselves to all kinds of experimentation and questioning. Is LSD a belief system? Does it allow you to see God? Can the Loneys' marriage—or any marriage, for that matter—survive the chaotic and sometimes orgiastic use of psychedelic drugs? Wry, witty, and wise, *Outside Looking In* is an ideal subject for this American master, and highlights Boyle's acrobatic prose, detailed plots, and big ideas. It's an utterly engaging and occasionally trippy

look at the nature of reality, identity, and consciousness, as well as our seemingly infinite capacities for creativity, re-invention, and self-discovery.

educators engage students in practices to bring the NGSS to life? Helping Students Make Sense of the World Using Next Generation Science and Engineering Practices was developed for K–12 science teachers, curriculum developers, teacher educators, and administrators.
