The 8th Grade Common Core

Science Practice Workbook
Mometrix Media LLC
From New York Times
bestselling author Sam Kean
comes incredible stories of
science, history, finance,
mythology, the arts, medicine,
and more, as told by the
Periodic Table. Why did
Gandhi hate iodine (I, 53)? How
did radium (Ra, 88) nearly ruin
Marie Curie's reputation? And
why is gallium (Ga, 31) the go-
to element for laboratory
pranksters?* The Periodic Table
is a crowning scientific
achievement, but it's also a
treasure trove of adventure,
betrayal, and obsession. These
fascinating tales follow every
element on the table as they play
out their parts in human history,
and in the lives of the
(frequently) mad scientists who
discovered them. THE
DISAPPEARING SPOON
masterfully fuses science with
the classic lore of invention,
investigation, and
discovery--from the Big Bang
through the end of time.
*Though solid at room
temperature, gallium is a
moldable metal that melts at 84
degrees Fahrenheit. A classic
science prank is to mold gallium
spoons, serve them with tea, and
watch guests recoil as their
utensils disappear.
