"Messages, Signs, and Meanings can be used directly in introductory courses in semiotics, communications, media, or culture studies. Additionally, it can be used as a complementary or supplementary text in courses dealing with cognate areas of investigation (psychology, mythology, education, literary studies, anthropology, linguistics). The text builds upon what readers already know intuitively about signs, and then leads them to think critically about the world in which they live - a world saturated with images of all kinds that a basic knowledge of semiotics can help filter and deconstruct. The text also provides opportunities for readers to do "hands-on" semiotics through the exercises and questions for discussion that accompany each

chapter. Biographical sketches of the major figures in the field are also included, as is a convenient glossary of technical terms." "The overall plan of the book is to illustrate how message-making and meaning-making can be studied from the specific vantage point of the discipline of semiotics. This third edition also includes updated discussions of information technology throughout, focusing especially on how meanings are now negotiated through such channels as websites, chat rooms, and instant messages."--Jacket.

This book presents operational and practical issues of automotive mechatronics with special emphasis on the heterogeneous automotive vehicle systems approach, and is intended as a graduate text as well as a reference for scientists and engineers involved in the design of automotive mechatronic control systems. As the complexity of automotive vehicles increases, so does the dearth of high competence, multi-disciplined automotive scientists and engineers. This book provides a discussion into the type of mechatronic control systems found in modern

vehicles and the skills required by automotive scientists and engineers working in this environment. Divided into two volumes and five parts, Automotive Mechatronics aims at improving automotive mechatronics education and emphasises the training of students' experimental hands-on abilities, stimulating and promoting experience among high education institutes and produce more automotive mechatronics and automation engineers. The main subject that are treated are: VOLUME I: RBW or XBW unibody or chassis-motion mechatronic control hypersystems; DBW AWD propulsion mechatronic control systems; BBW AWB dispulsion mechatronic control systems; VOLUME

II: SBW AWS conversion mechatronic control systems; ABW AWA suspension mechatronic control systems. This volume was developed for undergraduate and postgraduate students as well as for professionals involved in all disciplines related to the design or research and development of automotive vehicle dynamics, powertrains, brakes, steering, and shock absorbers (dampers). Basic knowledge of college mathematics, college physics, and knowledge of the functionality of automotive vehicle basic propulsion, dispulsion, conversion and suspension systems is required.

Media semiotics is a valuable method of focusing on the hidden meanings within media texts. This new edition brings Understanding Media Semiotics fully up to date and is written for students of the media, of linguistics and those interested in studying the ever-changing media in more detail. Offering an in-depth guide to help students investigate and understand the media using semiotic theory, this book assumes little previous knowledge of semiotics or linguistics, avoiding jargon and explaining the issues step by step. With in-depth case studies, practical accounts and directed further reading, Understanding Media Semiotics provides students with all the tools they need to understand semiotic analysis in the context of the media. Semiotic analysis is sometimes seen as complicated and difficult to

understand; Marcel Danesi shows that on the contrary it can be readily understood and can greatly enrich students' understanding of media texts, from print media right through to the internet and apps.

Atlas at War! collects fifty hard-hitting stories from Atlas Comics, the company that became Marvel Comics and published more war titles than anyone in the industry between the years 1951 and 1960. Comics historian Dr. Michael J. Vassallo has chosen the best of the best, many of which are coming back into print for the first time, from sixteen different Atlas war titles and featuring the artwork of twenty different artists--giants of the genre, including Russ Heath, John Severin, Bernie Krigstein, Joe Maneely, Jerry Robinson, Steve Ditko, and Jack Kirby. Each page has been

meticulously restored from its first printing by comic art restorer Allan Harvey. Atlas at War! covers the brutal pre-code period where graphic depictions of war action were rendered by artists who were World War II veterans themselves, as well as the post-code period, where code restrictions forced creators to tell stories without graphic violence but produced some of the most beautiful comic art of the genre. In addition to the artists, stories cover all aspects of war--from famous campaigns, weaponry, and personal soldier stories to political topics, Nazi atrocities, and even one story tinged with pre-code horror! Often overlooked in favor of its competitors, Atlas at War! will finally show that Atlas' war titles were second to no one.
