[Exemplary Science in Grades 9-12](#) St. Martin's Griffin

Biology for AP<sup>®</sup> courses covers the scope and sequence requirements of a typical two-semester Advanced Placement<sup>®</sup> biology course. The text provides comprehensive coverage of foundational research and core biology concepts through an evolutionary lens. Biology for AP<sup>®</sup> Courses was designed to meet and exceed the requirements of the College Board's AP<sup>®</sup> Biology framework while allowing significant flexibility for instructors. Each section of the book includes an introduction based on the AP<sup>®</sup> curriculum and includes rich features that engage students in scientific practice and AP<sup>®</sup> test preparation; it also highlights careers and research opportunities in biological sciences.

In this collection of 15 essays, educators describe successful programs they've developed to fulfill the US National Science Education Standards' vision for the reform of teaching assessment, professional development, and content at the high school level. All the visions correspond with the Less Emphasis and More Emphasis conditions that conclude each section of the Standards, characterizing what most teachers and programs should do less of as well as describing the changes needed if real reform is to occur. Essay titles reveal the range of programs, and creativity, this book encompasses. Among the titles are: "Technology and Cooperative Learning: The IIT Model for Teaching Authentic Chemistry Curriculum," "Modeling: Changes in Traditional Physics Instruction," "Guided by the Standards: Inquiry and Assessment in Two Rural and Urban Schools," and even "Sing and Dance Your Way to Science Success." The book ends with a summary chapter by editor Robert Yager on successes and continuing challenges in meeting the Standards' visions for improving high school science. As Yager notes, "The exemplary programs described in this monograph give inspiration while also providing evidence that the new directions are feasible and worth the energy and effort needed for others to implement changes.

Biological Macromolecules: Bioactivity and Biomedical Applications presents a comprehensive study of biomacromolecules and their potential use in various biomedical applications. Consisting of four sections, the book begins with an overview of the key sources, properties and functions of biomacromolecules, covering the foundational knowledge required for study on the topic. It then progresses to a discussion of the various bioactive components of biomacromolecules. Individual chapters explore a range of potential bioactivities, considering the use of biomacromolecules as nutraceuticals, antioxidants, antimicrobials, anticancer agents, and antidiabetics, among others. The third section of the book focuses on specific applications of biomacromolecules, ranging from drug delivery and wound management to tissue engineering and enzyme immobilization. This focus on the various practical uses of biological macromolecules provide an interdisciplinary assessment of their function in practice. The final section explores the key challenges and future perspectives on biological macromolecules in biomedicine. - Covers a variety of different biomacromolecules, including carbohydrates, lipids, proteins, and nucleic acids in plants, fungi, animals, and microbiological resources - Discusses a range of applicable areas where biomacromolecules play a significant role, such as drug delivery, wound management, and regenerative medicine - Includes a detailed overview of biomacromolecule bioactivity and properties - Features chapters on research challenges, evolving applications, and future perspectives

The paleontologist and professor of anatomy who co-discovered Tiktaalik, the "fish with hands," tells a "compelling scientific adventure story that will change forever how you understand what it means to be human" (Oliver Sacks). By examining fossils and DNA, he shows us that our hands actually resemble fish fins, our heads are organized like long-extinct jawless fish, and major parts of our genomes look and function like those of worms and bacteria. Your Inner Fish makes us look at ourselves and our world in an illuminating new light. This is science writing at its finest—enlightening, accessible and told with irresistible enthusiasm.

It ought to be a joyful time for Dr. Sara Alderson. Her daughter, Lizzie, is about to graduate college, and marry her longtime boyfriend. But the family's happiness is shattered when a drunk driver seriously injures her teenage son in a hit-and-run accident. Now, instead of planning her daughter's wedding, Sara must fight to save her son's life. And when she discovers who the drunk driver was – someone she thought was a colleague and a friend – she has to fight her desire for revenge. Because Sara knows she has the power to visit the driver's dreams, and in those dreams, she holds the power of life and death. Dream Wedding is the ninth and final book of the Dream Doctor Mysteries.
