The Symbolic Species: The Co-evolution of Language and the Brain Scholastic
"A work of enormous breadth, likely to pleasantly surprise both general readers and experts."—New York Times Book Review This revolutionary book provides fresh answers to long-standing questions of human origins and consciousness. Drawing on his breakthrough research in comparative neuroscience, Terrence Deacon offers a wealth of insights into the significance of symbolic thinking: from the co-evolutionary exchange between language and brains over two million years of hominid evolution to the ethical repercussions that followed man's newfound access to other people's thoughts and emotions. Informing these insights is a new understanding of how Darwinian processes underlie the brain's development and function as well as its evolution. In contrast to much contemporary neuroscience that treats the brain as no more or less than a computer, Deacon provides a new clarity of vision into the mechanism of mind. It injects a renewed sense of adventure into the experience of being human.

With an increasing emphasis on creativity and innovation in the twenty-first century, teachers need to be creative professionals just as students must learn to be creative. And yet, schools are institutions with many important structures and guidelines that teachers must follow. Effective creative teaching strikes a delicate balance between structure and improvisation. The authors draw on studies of jazz, theater improvisation and dance improvisation to demonstrate that the most creative performers work within similar structures and guidelines. By looking to these creative genres, the book provides practical advice for teachers who wish to become more creative professionals.

A Passion for Performance: Sarah Siddons and Her Portraitists brings together three engaging essays — by Robyn Asleson, Shelley Bennett and Mark Leonard, and Shearer West — that recreate the eventful life, both on and off the stage, of the great eighteenth-century actress Sarah Siddons. Siddons was renowned for her bravura performances in tragic roles, and her fame was enhanced by the many portraits of her painted by the leading artists of the day. The greatest of these was Sir Joshua Reynolds' s Sarah Siddons as the Tragic Muse, a painting now in the Huntington Art Collections and recently studied at the Getty Center. A Passion for Performance places this magnificent portrait within the context of Siddons' s career as an actress and cultural icon. Includes a chronology of Siddons' s life by volume editor Robyn Asleson.

This book is significant for its concept of "openness"--the artist's decision to leave arrangements of some constituents of a work to the public or to chance--and for its anticipation of two themes of literary theory: the element of multiplicity and plurality in art, and the insistence on literary response as an interaction between reader and text.

The enlightening, best-selling book on understanding sustainable energy and how we can make energy plans that add up. If you've ever wondered how much energy we use, and where it comes from — and where it could come from — but are fed up with all the hot air and 'greenwash', this is the book for you. Renewable resources are 'huge', but our energy consumption is also 'huge'. To compare 'huge' things with each other, we need numbers, not adjectives. Sustainable Energy — without the hot air addresses the energy crisis objectively, cutting through all the contradictory statements from the media, government, and lobbies of all sides. It gives you the numbers and the facts you need, in bite-sized chunks, so you can understand the issues yourself and organises a plan for change on both a personal level and an international scale — for Europe, the United States, and the world. In case study format, this informative book also answers questions surrounding nuclear energy, the potential of sustainable fossil fuels, and the possibilities of sharing renewable power with foreign countries. Written by David MacKay, who was an esteemed Professor of Engineering at the University of Cambridge and Chief Scientific Advisor to the UK Department of Climate Change, this is an uplifting, jargon-free and informative read for all. In it, David debunks misinformation and clearly explains the calculations of expenditure per person to encourage people to make individual changes that will benefit the world at large. If you've thrown your hands up in despair thinking no solution is possible, then read this book - it's an honest, realistic, and humorous discussion of all our energy options.

Twentyfour years have gone by since the publication of K. Lohner and H. Muller's comprehensive work "Gemischbildung und Verbrennung im Ottomotor" in 1967 [1.1] Naturally, the field of mixture formation and combustion in the spark-ignition engine has witnessed great technological advances and many new findings in the intervening years, so that the time seemed ripe for presenting a summary of recent research

and developments. Therefore, I gladly took up the suggestion of the editors of this series of books, Professor Dr. H. List and Professor Dr. A. Pischinger, to write a book summarizing the present state of the art. A center of activity of the Institute of Internal-Combustion Engines and Automotive Engineering at the Vienna Technical University, which I am heading, is the field of mixture formation -therefore, many new results that have been achieved in this area in collaboration with the respective industry have been included in this volume. The basic principles of combustion are discussed only to that extent which seem necessary for an understanding of the effects of mixture formation. The focal point of this volume is the mixture formation in spark-ignition engines, covering both the theory and actual design of the mixture formation units and appropriate intake manifolds. Also, the related measurement technology is explained in this work.

Between 1991 and 1993, the Army formulated a fighting doctrine recast to fit the power demands of a new strategic world. This new power-order replaced the Army's earlier "AirLand Battle" doctrine, first issued in 1982. This monograph addresses several questions revolving around the rapid replacement, less than 2 years after its success in the desert war, of a recognized and successful fighting doctrine. Discusses the roots of U.S. Army doctrine and the antecedent developments leading to the Army's recasting of its key battle doctrine. Examines the mechanism of the process of change, the effects of the new doctrine and how it was implemented.

Jeremy Clarkson knows there's more to life than cars. There is, after all, a whole world out there just waiting to be discovered. So, before he gets on with the job in hand, he'd like to take some time out to consider the bigger picture. Don't worry, he'll get on to the car bit eventually, but before we do, there's time to learn about: Why Galapagos tortoises are all mental France, reduced to the size of a small coconut Why Jeremy Paxman and the bass guitarist of AC/DC aren't so very different The problems of being English and God's most stupid creation And then there's the cars: Whether it's the poxiest little runabout or an exotic, firebreathing supercar, anything on four wheels is approached without fear or favour. What emerges from the ashes is not always pretty. But it is, invariably, very, very funny.

This book has proved its worth over the years as a text for courses in Production Management at the Faculty of Automotive Engineering in Turin, Italy, but deserves a wider audience as it presents a compendium of basics on Industrial Management, since it covers all major topics required. It treats all subjects from product development and “ make or buy ” -decision strategies to the manufacturing systems setting and management through analysis of the main resources needed in production and finally exploring the supply chain management and the procurement techniques. The very last chapter recapitulates the previous ones by analysing key management indicators to pursue the value creation that is the real purpose of every industrial enterprise. As an appendix, a specific chapter is dedicated to the basics of production management where all main relevant definitions, techniques and criteria are treated, including some numerical examples, in order to provide an adequate foundation for understanding the other chapters. This book will be of use not only to Automotive Engineering students but a wide range of readers who wish to gain insight in the world of automotive engineering and the automotive industry in general.

From Under the Wheel is an introspective look at loss and devastation and helps find a way to reach far beyond the events in our lives that leave scars. It challenges the Why Me? in all of us and exposes the path our choices ultimately create. It encourages a way to move past losses and difficulties by assigning a meaning to individual experiences. And finally, it helps excavate the true intent of your inner self to give purpose to living every day. Lynn Gawronski's view From Under the Wheel is both reality and metaphorical. The picture of the wheel of the single axel flat bed trailer sitting on her chest as it ran her over is forever imprinted in her memory. But even a miraculous recovery wouldn't stop trauma from happening again. Two years later, she was a passenger in a car hit broadside by another and was left partially paralyzed with facial injuries and emotional scars. The next twenty years would prove to challenge every bit of her faith with more tragedy and loss and at times, just life; each time stimulating another wheel and presenting another effort for recovery and healing whether physical or emotional. The end result is the emergence of a life with purpose and renewed spirit, but the book doesn't stop there. She also provides a planning tool and the steps that she is using to help her carry out her purpose in life so that the reader may do the same. With each new challenge and successful outcome, Lynn Gawronski considers herself out From Under the Wheel.
