The Digital Dialectic Harvard University Press  
Collected interviews featuring the Nebula Award – winning author and his thoughts on topics like literary criticism, comic books, race, and sexuality. For nearly three decades, Samuel R. Delany ’ s science fiction has transported millions of readers to the fringes of time, technology, and outer

space. Now Delany surveys the realms of his own experience as a writer, critic, theorist, and gay Black man in this collection of written interviews, a type of guided essay. Because the written interview avoids the “ mutual presence positioned at the semantic core ” of traditional interview, Delany explains, “ a kind of cut remains between the participants—a fissure in which the truths there may be more malleable, less rigid. ” Within that fissure Delany pursues the breadth and depth of his ideas on language and theory, the politics of literary composition, the experience of marginality, and the philosophical, commercial, and personal contexts of writing today. Gathered from sources as diverse as *Diacritics* and *The Comics Journal*, these interviews reveal the broad range of Delany ’ s thought and interests. “ Delany has a unique place in late twentieth century letters. A lifelong inhabitant of the margins, both social and literary, he has used his marginalized status as a lens to focus his astute observations of American literature and society. From these interviews his voice emerges, provocative, precise, and engaging. ” —Kathleen Spencer, University of Nebraska “ Samuel R. Delany never shies away from contestable positions or provocative opinions. In his fiction, Delany can write like quicksilver, and in lectures or panel discussions, he is easily SF ’ s most articulate spokesperson in academia. . . . There is much here that is not covered in Delany ’ s critical or

autobiographical writings, and much that anyone seriously interested in SF—or many of Delany's other favorite topics—ought to consider.” —Locus “ Delany is fascinating whether discussing SF, comics, or his experiences as a Black American, and this collection . . . is as entertaining as it is informative.” —Science Fiction Chronicle “ Yevgeny Zamyatin? Stanislaw Lem? Forget it! Delany is both, with a lot of Borges and Bruno Schultz thrown in. ” —Village Voice

A large number of practical examples and problems are included throughout to help readers bridge the gap between theory and practice. Covering a wide range of topics concerning the dynamics of road and off-road vehicles, this Third Edition is filled with up-to-date information, including:

- \* The Magic Formula for characterizing pneumatic tire behavior from test data for vehicle handling simulations
- \* Computer-aided methods for performance and design evaluation of off-road vehicles, based on the author's own research
- \* Updated data on road vehicle transmissions and operating fuel economy

Fundamentals of road vehicle

stability control \* Optimization of the performance of four-wheel-drive off-road vehicles and experimental substantiation, based on the author's own investigations \*

This book, based on Pólya's method of problem solving, aids students in their transition to higher-level mathematics. It begins by providing a great deal of guidance on how to approach definitions, examples, and theorems in mathematics and ends by providing projects for independent study. Students will follow Pólya's four step process: learn to understand the problem; devise a plan to solve the problem; carry out that plan; and look back and check what the results told them.

Three Poems, Hannah Sullivan's debut collection, which won the 2018 T. S. Eliot Prize, reinvents the long poem for a digital age. "You, Very Young in New York" paints the portrait of a great American city, paying close attention to grand designs as well as local details, and coalescing in a wry and tender study of romantic possibility, disappointment, and the obduracy of innocence. "Repeat Until Time" shifts the scene to California and combines a poetic essay on the nature of repetition with an enquiry into pattern-making of a personal as well as a philosophical kind. "The Sandpit After Rain" explores the birth of a child and death of a father with exacting clarity.

*Feedback Systems* Springer Nature

The essential introduction to the principles and applications of feedback systems—now fully revised and expanded This textbook covers the mathematics needed to model, analyze, and design feedback systems. Now more user-friendly than ever, this revised and expanded edition of *Feedback Systems* is a one-volume resource for students and researchers in mathematics and engineering. It has applications across a range of disciplines that utilize feedback in physical, biological, information, and economic systems. Karl Åström and Richard Murray use techniques from physics, computer science,

and operations research to introduce control-oriented modeling. They begin with state space tools for analysis and design, including stability of solutions, Lyapunov functions, reachability, state feedback observability, and estimators. The matrix exponential plays a central role in the analysis of linear control systems, allowing a concise development of many of the key concepts for this class of models. Åström and Murray then develop and explain tools in the frequency domain, including transfer functions, Nyquist analysis, PID control, frequency domain design, and robustness. Features a new chapter on design principles and tools, illustrating the types of problems that can be solved using feedback Includes a new chapter on fundamental limits and new material on the Routh-Hurwitz criterion and root locus plots Provides exercises at the end of every chapter Comes with an electronic solutions manual An ideal textbook for undergraduate and graduate students Indispensable for researchers seeking a self-contained resource on control theory

*Black Skin, White Masks* is a classic, devastating account of the dehumanising effects of colonisation experienced by black subjects living in a white world. First published in English in 1967, this book

provides an unsurpassed study of the psychology of racism using scientific analysis and poetic grace. Franz Fanon identifies a devastating pathology at the heart of Western culture, a denial of difference, that persists to this day. A major influence on civil rights, anti-colonial, and black consciousness movements around the world, his writings speak to all who continue the struggle for political and cultural liberation. With an introduction by Paul Gilroy, author of *There Ain't No Black in the Union Jack*.

Friendship That Changed Our Minds In his mega bestseller, *Thinking, Fast and Slow*, Daniel Kahneman, the renowned psychologist and winner of the Nobel Prize in Economics, takes us on a groundbreaking tour of the mind and explains the two systems that drive the way we think. System 1 is fast, intuitive, and emotional; System 2 is slower, more deliberative, and more logical. The impact of overconfidence on corporate strategies, the difficulties of predicting what will make us happy in the future, the profound effect of cognitive biases on everything from playing the stock market to planning our next vacation—each of these can be understood only by knowing how the two systems shape our judgments and decisions. Engaging the reader in a lively conversation about how we think, Kahneman reveals where we can and cannot trust our intuitions and how we can tap into the benefits of slow thinking. He offers practical and enlightening insights into how choices are made in both our business and our personal lives—and how we can use

different techniques to guard against the mental glitches that often get us into trouble. Winner of the National Academy of Sciences Best Book Award and the Los Angeles Times Book Prize and selected by The New York Times Book Review as one of the ten best books of 2011, *Thinking, Fast and Slow* is destined to be a classic.

This book closes the gap for beginners who want to study the Amharic language and had difficulties in finding the right grammar for this purpose: The first grammar of Amharic, the national language of Ethiopia, was published by Hiob Ludolf in 1698. The Amharic grammar published by Praetorius in 1879 is based on Amharic religious texts and on scattered material, usually composed by missionaries. A milestone in the study of Amharic is Marcel Cohen's *Traite de langue amharique* (1936),

but this grammar, too is not completely suited for beginners since the author's generalizations are at times aimed at linguists. The grammar that comes closest to the concept of a beginner's grammar is that of C.H. Dawkin (1960), yet this grammar is extremely short, does not give examples and does not introduce the student to the intricacies of the language. The new book gives all the grammatical forms and the sentences of the present grammar in Amharic script and in phonetic transcription. The illustrative examples have a free and a literal translation. This procedure should likewise prove to be useful for the Semitist as well as for the general linguist.
