The Manual of Tests and
Criteria contains criteria,
test methods and procedures to
be used for classification of
dangerous goods according to
the provisions of Parts 2 and 3
of the United Nations
Recommendations on the
Transport of Dangerous Goods,
Model Regulations, as well as
of chemicals presenting
physical hazards according to
the Globally Harmonized System
of Classification and Labelling
of Chemicals (GHS). As a
consequence, it supplements

also national or international
regulations which are derived
from the United Nations
Recommendations on the Transport
of Dangerous Goods or the GHS.
At its ninth session (7 December
2018), the Committee adopted a
set of amendments to the sixth
revised edition of the Manual as
amended by Amendment 1. This
seventh revised edition takes
account of these amendments. In
addition, noting that the work
to facilitate the use of the
Manual in the context of the GHS
had been completed, the
Committee considered that the
reference to the
"Recommendations on the

Transport of Dangerous Goods" in the title of the Manual was no longer appropriate, and decided that from now on, the Manual should be entitled "Manual of Tests and Criteria".

Those interested in state of the art in computational fluid dynamics will find this publication a valuable source of reference. The contributions are drawn from The International Conference on Computational Fluid Dynamics (ICCFD) held in 2004. The conference is staged every two years and brings together physicists, mathematicians and engineers who review and share recent advances in mathematical and computational techniques for modeling fluid dynamics.

Technical Abstract Bulletin Jones & Bartlett Publishers

A series in which relevant information is assembled into single, concise volumes--each pertaining to a specific security problem and closely related issues. The volumes focus on the concerns that transportation agencies are addressing when developing programs in response to the terrorist attacks of September 11, 2001, and the anthrax attacks that followed. Future volumes of the report will be issued as they are completed.

The new edition of the well known Care and
Repair of Advanced Composites, 3rd Edition,
improves on the usefulness of this practical guide
geared towards the aerospace industry. Keith B.
Armstrong, the original lead author of the first
edition was still in charge of this project, counting
on the expert support of Eric Chesmar, senior
composites specialist at United Airlines. Mr.
Chesmar is also an active member of SAE
International's CACRC (Commercial Aircraft
Composite Repair Committee), an elite group of
industry experts dedicated to the standardization,
safety, security, and efficiency of composite repairs
in the airline industry. Mr. Francois Museux

(Airbus) and Mr. William F. Cole II also contributed. *Care and Repair of Advanced Composites*, 3rd Edition, presents a fully updated approach to the training syllabus recommended for repair design engineers and composite repair mechanics. Metal bonding has been included partly because the definition of "composite" can be interpreted to include metal-skinned honeycomb panels, and partly because some composite parts have metal fittings or reinforcements that must be treated before bonding. This third edition also covers a number of the problems experienced in service, some of which may be applicable to metallic sandwich panels, offers suggestions for design improvements, including repair design as a particular topic, and regulatory changes. *Care and Repair of Advanced Composites*, 3rd Edition, provides solid technical information and training for a wide range of airline staff.

Does the identification number 60 indicate a toxic substance or a flammable solid, in the molten state at an elevated temperature? Does the identification number 1035 indicate ethane or butane? What is the difference between natural gas transmission pipelines and natural gas distribution pipelines? If you came upon an overturned truck on the highway that was leaking, would you be able to identify if it was hazardous and know what steps to take? Questions like these and more are answered in the *Emergency Response Guidebook*. Learn how to identify symbols for and vehicles carrying toxic, flammable, explosive, radioactive, or otherwise harmful substances and how to respond once an incident involving those substances has been identified. Always be prepared in situations that are unfamiliar and dangerous and know how to rectify them. Keeping this guide around at all times will ensure that, if you were to come upon a transportation situation involving hazardous substances or dangerous goods, you will be able to

help keep others and yourself out of danger. With color-coded pages for quick and easy reference, this is the official manual used by first responders in the United States and Canada for transportation incidents involving dangerous goods or hazardous materials.
