When we're ill, we trust in doctors to put our well-being first. But medicine's expanding capability and soaring costs are putting this promise at risk. Increasingly, society is calling upon physicians to limit care and to use their skills on behalf of health plan bureaucrats, public officials, national security, and courts of law. And doctors are answering this call. They're endangering patients, veiling moral choices behind the language of science and, at times, compromising our liberties. In *The Hippocratic Myth*, Dr. M. Gregg Bloche marshals his expertise in medicine and the law to expose how: *Doctors are pushed into acting both as caregivers and cost-cutters, compromising their fidelity to patients *Politics keeps doctors from giving war veterans the help they need *Insurers and hospital administrators pressure doctors to discontinue life-saving treatment, even when patients and family members object *Medicine has become a weapon in America's battles over abortion, child custody, criminal responsibility, and the rights of gays and lesbians *The war on terror has exploited clinical psychology to inflict harm Challenging, provocative, and insightful, *The Hippocratic Myth* breaks the code of silence and issues a powerful warning about the need for doctors to forge a new compact with patients and society.

This book provides readers with a clear description of the types of lunar and interplanetary trajectories, and how they influence satellite-system design. The description follows an engineering rather than a mathematical approach and includes many examples of lunar trajectories, based on real missions. It helps readers gain an understanding of the driving subsystems of interplanetary and lunar satellites. The tables and graphs showing features of trajectories make the book easy to understand.

Built as both a fighter-interceptor and fighter-bomber, the F-86 Sabre (sometimes called the Sabrejet) was one of the most widely-produced fighters of the Cold War. In December of 1950, three squadrons of Sabres were rushed into combat in Korea, where they duelled North Korean, Chinese and Russian pilots flying the MiG-15. By the time the war was over, F-86 pilots achieved a stunning victory ratio - destroying nearly 800 enemy aircraft with a loss of only 76 Sabres. The nimble jet also saw combat in the Taiwan Strait Crisis and the Indo-Pakistan Wars of 1965 and 1971. Originally printed by North American and the U.S. Air Force, this F-86 Flight Operating Manual taught pilots everything they needed to know before entering the cockpit. Classified "Restricted," the manual was recently declassified and is here reprinted in book form. This facsimile has been reformatted and color images appear in black and white. Care has been taken to preserve the integrity of the text.

The relationship between resources and development is the pivot around which the present study revolves. Focussing on the process of resource creation and utilization it emphasizes the need of equitable development integrating local needs, resources, people and functions. The resource exploitation and their utilization are two independent economic activities influenced by different algorithms and usually have manifested in core-periphery relationship. Reviews the persistent problems of economic development in perspective of exploitation of natural resources with the objective to provide some clues for occurrence and persistence of regional disparities and for suggesting a development model synchronising both the resource management and environmental protection.

On June 1, 1999, at 2350:44 central daylight time, American Airlines flight 1420, a McDonnell Douglas DC-9-82, crashed after it overran the end of runway 4R during landing at Little Rock National Airport in Little Rock, Arkansas. The flight originated from Dallas/Fort Worth International Airport, Texas. There were 145 persons on board. The airplane was destroyed by impact forces and a postcrash fire. The captain and 10 passengers were killed; 120 crewmembers and passengers received serious or minor injuries; and 24 passengers were not injured. The National Transportation Safety Board determines that the probable causes were the flight crew's failure to discontinue the approach when severe thunderstorms.
