Since ancient Egypt and Greece, people have relied on the art of dreaming to diagnose illness and get answers to personal life challenges. Now, dreams are making a grand reappearance in the medical arena as recent scientific research and medical pathology reports validate the diagnostic abilities of precognitive dreams. Are we stepping back into the future as modern medical tests show dreams can be early warning signs of cancer and other diseases? Showcasing the important role of dreams and their power to detect and heal illness, Dr. Larry Burk and Kathleen O'Keefe-Kanavos share amazing research and true stories of physical and emotional healings triggered by dreams. The authors explore medical studies and ongoing research on the diagnostic power of precognitive dreams, including Dr. Burk's own research on dreams that come true and can be medically validated. "Prealgebra is designed to meet scope and sequence requirements for a one-semester prealgebra course. The text introduces the fundamental concepts of algebra while addressing the needs of students with diverse backgrounds and learning styles. Each topic builds upon previously developed material to demonstrate the cohesiveness and structure of mathematics. Prealgebra follows a nontraditional approach in its presentation of content. The beginning, in particular, is presented as a sequence of small steps so that students gain confidence in their ability to succeed in the course. The order of topics was carefully planned to emphasize the logical progression throughout the course and to facilitate a thorough understanding of each concept. As new ideas are presented, they are explicitly related to previous topics."--BC Campus website.

During the past three decades there has been a large amount of research on biological nitrogen fixation, in part stimulated by increasing world prices of nitrogen-containing fertilizers and environmental concerns. In the last several years, research on plant--microbe interactions, and symbiotic and asymbiotic nitrogen fixation has become truly interdisciplinary in nature, stimulated to some degree by the use of modern genetic techniques. These methodologies have allowed us to make detailed analyses of plant and bacterial genes involved in symbiotic processes and to follow the growth and persistence of the root-nodule bacteria and free-living nitrogen-fixing bacteria in soils. Through the efforts of a large number of researchers we now have a better understanding of the ecology of rhizobia, environmental parameters affecting the infection and nodulation process, the nature of specificity, the biochemistry of host plants and microsymbionts, and chemical signalling between symbiotic partners. This volume gives a summary of current research efforts and knowledge in the field of biological nitrogen fixation. Since the research field is diverse in nature, this book presents a collection of papers in the major research area of physiology and metabolism, genetics, evolution, taxonomy, ecology, and international programs.

This booklet focuses on the reading literacy test scores of students in the grade levels where most 9 and 14 year olds were to be found in 32 systems of education. It describes the achievement levels of carefully selected probability samples of students in three domains of reading literacy and makes some preliminary interpretations of these results. The comparisons made in the test scores require the reader to assume that the tests were equally fair for all countries, that the tests were properly translated and administered, and that the student samples were comparable in age, in test motivation, and in their approach to test taking. Much effort was taken to ensure and to check on these possible influences. Where differences were still found to exist - for instance, in mean ages - comments have been made in the text and adjustments to the scores have been attempted.
