This booklet focuses on the reading literacy test scores of students in the grade levels where most 9 and 14 year olds were to be found in 32 systems of education. It describes the achievement levels of carefully selected probability samples of students in three domains of reading literacy and makes some preliminary interpretations of these results. The comparisons made in the test scores require the reader to assume that the tests were equally fair for all countries, that the tests were properly translated and administered, and that the student samples were comparable in age, in test motivation, and in their approach to test taking. Much effort was taken to ensure and to check on these possible influences. Where differences were still found to exist - for instance, in mean ages - comments have been made in the text and adjustments to the scores have been attempted.

Pollination Biology reviews the state of knowledge in the field of pollination biology. The book begins by tracing the historical trends in pollination research and the development of the two styles of pollination biology. This is followed by separate chapters on the evolution of the angiosperms; the evolution of plant-breeding systems; the geographical correlations between breeding habit, climate, and mode of pollen transfer; and sexual selection in plants. Subsequent chapters examine the process of sexual selection through gametic competition in *Geranium maculatum*; the effects of different gene movement patterns on plant population structure; the foraging behavior of pollinators; adaptive nature of floral traits; and competitive interactions among flowering plants for pollinators. The book is designed to provide useful material for advanced undergraduate and graduate students wishing to familiarize themselves with modern pollination biology and also to provide new insights into specific problems for those already engaged in pollination research. The book is intended to be used for both teaching and research.

This book, drawing together the work of 15 scholars, is the first attempt to discover what really happened during the war in British agriculture. It shows just how closely directed agriculture and individual farmers were in wartime, and the determination with which uncooperative or 'failing' farmers might be dispossessed. It describes the tensions between agriculture and the military, showing how the ploughing up campaign added land to the national farm but just at the time when the military were taking it for airfields and training grounds. This revelatory book challenges received wisdom about farming in wartime. It is essential reading for all interested in the evolution of twentieth-century farming and in the historical origins of farming's present predicament.
