The introduction of unmanned aircraft systems (UAS) has presented a wide range of new safety, economic, operational, regulatory, community, environmental, and infrastructure challenges to airports and the National Airspace System. These risks are further complicated by the dynamic and shifting nature of UAS technologies. The TRB Airport Cooperative Research Program's ACRP Research Report 212: Airports and Unmanned Aircraft Systems, Volume 1: Managing and Engaging Stakeholders on UAS in the Vicinity of Airports provides guidance for airport operators and managers to interact with UAS operations in the vicinity of airports. The demand for commercial UAS may increase significantly once advanced UAS operations—including beyond visual line of sight (BVLOS) operations, operations over people, and operations of multiple UAS by one pilot—are allowed through broader regulatory frameworks. Understanding the nature of UAS operations, platforms, and applications is a topic of interest at most, if not all, airports. Currently, federal regulations allow broad commercial use of UAS in the United States for the first time. However, UAS operations directly over people are still prohibited unless the operator has received a waiver or other approval from the Federal Aviation Administration (FAA). The activities of small UAS (those weighing less than 55 pounds) may take many forms, including multi-rotor, fixed wing, and hybrid vertical take-off and landing with fixed-wing forward flight vehicles. Some UAS operations near airports will require the ability to fly over populated areas and therefore will require waivers to allow operations over people. As a part of managing UAS operations, it will be important for airport operators to understand the regulatory requirements and framework as well as to have the ability to obtain waivers and exemptions. This guidebook describes the regulatory frameworks that currently exist so

that airport managers and operators will be in a better position to interact and guide UAS users who fly in their vicinity. Other Resources: Volume 2: Incorporating UAS into Airport Infrastructure—Planning Guidebook provides planning, operational, and infrastructure guidance to safely integrate existing and anticipated UAS operations into an airport environment. Volume 3: Potential Use of UAS by Airport Operators provides airports with resources to appropriately integrate UAS missions as part of their standard operations. ACRP Web-Only Document 42: Toolkits and Resource Library for Airports and Unmanned Aircraft Systems.

Alain Verbeke, Journal of International Business Studies The second edition of Multinational Enterprises and the Global Economy provides unparalleled coverage not only of the literature relevant to IB research but also of the evolution of IB in the world economy. Dunning and Lundan offer powerful insights into the societal effects of MNEs and the role of business government relations in the IB context. Journal of International Business Studies This wonderful book offers the definitive synthesis of the modern literature on the economic aspects of international business. It is encyclopedic yet full of incisive insights. It is a creative masterpiece which unbundles the DNA of the multinational enterprise and shows how it is the cornerstone of the field of international business. Alan M. Rugman, University of Reading, UK The rise of the multinational enterprise, and the consequent globalisation of the world economy, was arguably the single most important phenomenon of the second half of the twentieth century. This magisterial book, written by two leading authorities, examines this phenomenon in depth. It explains how foreign investment by multinationals diffused advanced technologies and novel management methods, driving productivity growth in Europe, Asia and North America; however, economic inequalities were reinforced as rich countries attracted more foreign investment than poor ones. This new edition of a classic work is not only an authoritative guide to contemporary multinational business, but a major historical resource for the future. Mark Casson,

University of Reading, UK This thoroughly updated and revised edition of a widely acclaimed, classic text will be required reading for academics, policymakers and advanced students of international business worldwide. Employing a distinctive and unified framework, this book draws together research across a range of academic fields to offer a synthesis of the determinants of MNE activity, and its effects on the economic and social well-being of developed and developing countries. Unique to the new edition is its focus on the institutional underpinnings of the resources and capabilities of MNEs, and the role of MNE activity in transmitting and facilitating institutional change. Since the initial publication of this book more than a decade ago, the economic, managerial and social implications of globalisation and technological advancement have become even more varied and prominent. Accompanying these developments, there has been a rise in scholarly interest in interdisciplinary research addressing the important challenges of an ever-changing physical and human environment. Drawing on articles and books from international business and economics, as well as economic geography, political economy and strategic management, a systematic overview of the developments in scholarly thinking is prese
