All-Story Weekly, Jan 25 1919 Delmar Pub

Recently another book on insect physiology was published. It was restricted to a few focal points as are many of these new insect physiology books, but there was considerable depth in its specialized point of view. We were discussing the structure of this book and of insect physiology books, in general, when Prof. Remmert asked me " . . . and what about books on spider physiology?" Silence. Then I started to explain "oh yes, there is a congress proceedings volume on this topic and there is a group with excellent publications on another topic . . . ", but I felt that this answer was weak. One can no longer buy the proceedings volume in a bookshop and to read a series of publications on a given topic one must search in a library for a dozen journals. Why is there not a single book on spider physiology comparable with the many books on insect physiology? Are spiders a scientific ivory tower, far from public interest and commercial importance? I do not think so, although spiders are one of the many "forgotten" animal groups which always grew in the shadow of the insects. There are research groups working on spider physiology, there are fascinating phenomena in this animal group and there are plenty of exciting results. Spiders may have been always underresearched, but research is progressing. In the last few years, new books have been published, e. g. Humanitarian Charter and Minimum Standards in Disaster Response Cengage Learning This book discusses and provides insight on the

legal and ethical dilemmas of managing those with Fetal Alcohol Spectrum Disorder (FASD). This book provides a clear perspective for those clinicians and legal professionals who are working with those with this disorder, and correspondingly increases their understanding when arranging effective supports for this population. Historically, the primary focus on FASD has been on children. However, this is a lifelong disorder and the implications of this disorder become even more prominent and complex in adulthood. Those with this condition can struggle with impulsiveness, and a host of cognitive difficulties. This correspondingly impacts their independence and employability, and produces an elevated risk for homelessness and other residential issues, involvement in substance use, being exploited, development of behavioural issues, and subsequent legal difficulties. Their cognitive difficulties result in challenges for legal systems around the world to understand their issues, and to design appropriate

remedial strategies, recommendations for treatments and supports, and even for understanding the failure of many of these individuals to be able to change their behaviours effectively. This produces various legal and ethical dilemmas, which are discussed in detail in this volume by 28 authors from Europe, New Zealand and North America. These include discussions regarding the rights of the unborn child, the alcohol industry's duty to warn, whether small amounts of alcohol during pregnancy can be condoned, and even the current use of involuntary hospitalization for addicted mothers. Other chapters discuss the need for training on FASD for front line officers, use of lies during interrogation of those with FASD, medical and legal interventions for offenders with FASD, access to diagnostic services and follow-up supports, and whether FASD can be considered a mitigating factor for sentencing. Furthermore, caregivers also provide their stories regarding the daily dilemmas that are faced in raising those with FASD.

Maps capture data expressing the economic
complexity of countries from Albania to
Zimbabwe, offering current economic measures
and as well as a guide to achieving prosperity Why
do some countries grow and others do not? The
authors of *The Atlas of Economic Complexity* offer
readers an explanation based on "Economic
Complexity," a measure of a society's productive
knowledge. Prosperous societies are those that have
the knowledge to make a larger variety of more
complex products. *The Atlas of Economic
Complexity* attempts to measure the amount of
productive knowledge countries hold and how they
can move to accumulate more of it by making more
complex products. Through the graphical
representation of the "Product Space," the authors
are able to identify each country's "adjacent
possible," or potential new products, making it
easier to find paths to economic diversification and
growth. In addition, they argue that a country's
economic complexity and its position in the product
space are better predictors of economic growth than
many other well-known development indicators,
including measures of competitiveness, governance,
finance, and schooling. Using innovative
visualizations, the book locates each country in the
product space, provides complexity and growth
potential rankings for 128 countries, and offers
individual country pages with detailed information
about a country's current capabilities and its
diversification options. The maps and visualizations
included in the Atlas can be used to find more
viable paths to greater productive knowledge and
prosperity.
