Antistatic sprays from
several different

manufacturers are examined. The sprays are examined for contamination potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry, mass spectrometry, and ultraviolet spectrophotometry. The results show that 12 of the 17 antistatic sprays examined have a low contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary. Information on some of the properties of some

antistatic sprays is presented in this document to aid in the evaluation process. Ming, James E. Goddard Space Flight Center

<p>choices that drive organizational growth and learning. This book presents a system of six practical choices that articulate exactly how to launch and grow brands. Big Picture Strategy shows readers how limiting and focusing the strategic options available to company stakeholders can unlock previously inaccessible levels of productivity and growth. Strategist, consultant, and author Marta Dapena Barón describes the six key decisions facing organizations and teams today and how to develop a winning strategy by approaching these decisions systematically. The book includes discussions of: The critical choices that leaders must make to define a marketing strategy and to align their teams to be able to execute on it The four strategies companies</p>	<p>use to launch and grow brands successfully How to use strategy-integrated metrics to promote continuous learning in organizations How to increase communications efficiency in commercial organizations through the use of a common vocabulary to frame customer-based issues Unlike many of its competitors, Big Picture Strategy does not pretend that your organization has unlimited resources or capacity to pursue every area of possible strategic advantage. Instead, the author lays out a systematic and integrated choice-based framework that will drive growth in your organization for years to come. <u>Cruise Control-CC</u> Dundurn Vehicle Design guides readers through the methods and processes designers use</p>

Revised 4th Edition Dundurn
Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. U.S. automakers are suddenly awash in profits, and South Koreans and Europeans have

gained market shares, while Honda, Nissan, and Toyota have curtailed production following the 2011 tsunami in Japan. Shortages of Japanese new cars and supplier disruptions will likely push used car prices through the roof well into 2012, so what should a savvy buyer do? The all-new Lemon-Aid Used Cars and Trucks 2012-2013 has the answers, including: More vehicles rated, with some redesigned models that don ' t perform as well as previous iterations downrated. More roof crash-worthiness ratings along with an expanded cross-border shopping guide. A revised summary of safety- and performance-related

defects that are likely to affect rated models. More helpful websites listed in the appendix as well as an updated list of the best and worst "beaters" on the market. More "secret" warranties taken from automaker internal service bulletins and memos than ever.

Achieving your goals quickly and efficiently is both more difficult and more important in today ' s hyper-globalized world. A new environment is being created by disruptive technology, radical new business models, digital communications, and a highly integrated global supply chain. It is a world in which a reality TV host and businessman became President of the United States, in

which terrorists use social media to recruit employees, investors, suppliers, members and to broadcast executions, in which the very existence of the nation state is in question, where everyone can communicate globally 24 hours a day at no cost, and in which a leader is much more likely to be at the center of a crisis. Today, successful global leaders will be those that have a working knowledge of strategic public relations as described in this book. For current and future leaders of business and government it is essential to understand the forces creating this very challenging new environment and to acquire a new skill set. This book provides the needed understanding and teaches you the skill of public relations as multi-stakeholder relationship management. It shows how to achieve your goals and objectives when others fail by building win-win outcomes with current and future distributors, customers, governments and all the other stakeholders. Written by a veteran public relations professional and a visiting professor of major graduate schools of management.

Real-life examples from the author's experience illuminate a step-by-step plan that can help entrepreneurial leaders achieve their goals. Entrepreneurial leaders are in need of a practical compass, and this book gives them just that. Combining principles of leadership and entrepreneurship, the guide covers basic concepts and pertinent

issues for leaders at all levels and does so in a manner that is at once lively, relevant, and entertaining. Drawing on the best thinking from both business and academia, the book irrefutably demonstrates the connection between skilled leadership and organizational effectiveness and performance. Readers are provided with two easy-to-follow models that are applicable to all types of organizations. The Opportunity Model (Part I) shows exactly how to identify business-generating opportunities, while the Enduring Leadership Model (Part II) outlines the author's unique leadership principles, what he calls

"Personal" and "Professional" Leadership. Used together, these two models give today's entrepreneurial leaders the real-life tools they need to succeed. To illustrate what works—and what doesn't—the author takes readers inside the highly volatile beverage industry and shares his greatest successes and failures running Adirondack Beverages, a company that still thrives today based on principles instilled more than 20 years ago.

<p>This volume chronicles the maturation of the South Korean auto industry and its native automakers, from the 1997 Asian Crisis to 2019. After examining the context for domestic vehicle production in South Korea, the author presents multiple case studies for all five Korean automakers: General Motors Korea/Daewoo Motors, Kia, Hyundai, Ssangyong and Renault Samsung. This includes coverage of Hyundai-Kia ' s foreign plants in North America, Europe, India, China, and Emerging Asia. The book closes by assessing the five-to-ten-year future outlooks for Korean automakers at home and abroad.</p>	<p>This important work will prove informative to scholars of business, management, automotive history, international development, Asian studies, and public administration. They assume that making a lot of money requires exploiting others, and that the best way to wash off the resulting stain is to give a lot of it away. In Why It ' s OK to Want to Be Rich, Jason Brennan shows that the moralizers have it backwards. He argues that, in general, the more</p>

money you make, the more you already do for others, and that even an average wage earner is productively “giving back” to society just by doing her job. In addition, wealth liberates us to have the best chance of leading a life that’s authentically our own.

Brennan also demonstrates how money-based societies create nicer, more trustworthy, and more cooperative citizens. And in another chapter that takes on the new historians of capitalism, Brennan argues that wealthy nations became wealthy because of their healthy institutions, not from their horrific histories of slavery or colonialism.

While writing that the more money one has, the more one should help others, Brennan also notes that we weren’t born into a perpetual debt to society. It’s OK to get rich and it’s OK to enjoy being rich, too. --- Key Features Shows how the desire to become wealthy in an open and fair market helps maximize cooperation and lessens the chance of violence and war Argues that it is much easier for the average for-profit business to add value to the world than it is for the average non-profit Demonstrates that the kinds of virtues (e.g., conscientiousness, thoughtfulness, hard work) that lead to desirable personal and civic

states (e.g., happy marriages, stable families, engaged citizens) also make people richer. Argues that living in small clans for most of their history has given humans a negative attitude towards anyone acquiring more than her "fair share," an attitude that 's ill-suited for our market-driven, globally connected world. In a final, provocative chapter, maintains that ideal economic growth is infinite.

This book results from a conference held in Singapore in September 2009 that brought together distinguished lawyers and economists to examine the differences and similarities in the intersection between intellectual property and competition laws in Asia. The prime focus was how best to balance these laws to improve economic welfare. Countries in Asia have different levels of development and experience with intellectual property and competition laws. Japan has the longest experience and now vigorously enforces both competition and intellectual property laws. Most other countries in Asia have only recently introduced intellectual property laws (due to the Trade-Related Aspects of Intellectual Property Rights (TRIPS) Agreement) and competition laws (sometimes due to the World Bank, International Monetary Fund or free trade agreements). It would be naïve to think that laws, even if similar on the surface, have the same goals or can be enforced similarly. Countries have

differing degrees of acceptance of these laws, different economic circumstances and differing legal and political institutions. To set the scene, Judge Doug Ginsburg, Greg Sidak, David Teece and Bill Kovacic look at the intersection of intellectual property and competition laws in the United States. Next are country chapters on Asia, each jointly authored by a lawyer and an economist. The country chapters outline the institutional background to the intersection in each country, discuss the policy underpinnings (theoretically as well as describing actual policy initiatives), analyse the case law in the area, and make policy prescriptions.

"Chock-full of amusing car-related trivia and miscellany." —Detroit News
Did you know that after James Dean's death behind the wheel of his Porsche

550 Spyder, parts of the car were sold off, and said parts then cursed their new owners? (Or did they?) Did you know Bonnie and Clyde stole Ford V-8s almost exclusively as getaway cars because they were the fastest cars of their day—and that Clyde wrote Henry Ford a thank-you note? Did you know that a monkey by the name of Jocko Flocko once won a Grand National race? (NASCAR Hall of Fame driver Tim Flock helped.) Rumors, myths, and fantastic stories have swirled around the automobile for over a century. This fascinating collection compiles funny stories and a trunkful of trivia: What was the first car to break the sound barrier? Who won the first Indy 500? What kind of car was

dancer Isadora Duncan in when she was killed? What car performed the most spectacular stunt in the James Bond movie oeuvre? In all of these cases, the answers may not be what you think.

The concept and prototype cars that are shown at major industry events feature cutting-edge technologies that the automotive industry wishes to preview. Often these technologies make an appearance in future production models. Concept Car Year in Review: 2013 provides insight to the key engineering ideas that were introduced in concept and prototype cars during that year. This full-

color book includes articles that were previously published and written by the award-winning editors of Automotive Engineering International about these concept cars. This book provides a preview of the technologies we could experience in our vehicles in the future. It gives the reader an inside glimpse of how new ideas for vehicles are formed and how they are implemented into the cars we drive. Published for enthusiasts who are interested in future car models and their technologies, as well as practicing automotive engineers who are interested in new engineering trends such as hybrid systems, powertrain designs, automotive design, lightweighting, and materials, and new engineers who want an overview of future trends, Concept Car in Review: 2013 also:

- Provides one place where readers can find information on key

engineering trends over one year. • Allows readers to easily find specific car models or read about all of them. • Includes interviews with engineering innovators who pioneer technologies in concept cars. • Features many large, full-color images and an attractive magazine format.

Collision Reconstruction Methodologies -
Volume 7B - The last ten years have seen explosive growth in the technology available to the collision analyst, changing the way reconstruction is practiced in

fundamental ways. The greatest technological advances for the crash reconstruction community have come in the realms of photogrammetry and digital media analysis. The widespread use of scanning technology has facilitated the implementation of powerful new tools to digitize forensic data, create 3D models and visualize and analyze crash vehicles and environments. The introduction of unmanned aerial systems and standardization of crash data recorders to the crash reconstruction community have enhanced the ability of a crash analyst to visualize and model the components of a crash reconstruction. Because of the technological changes occurring in the industry, many SAE papers have been written to address the validation and use of new tools for collision reconstruction. Collision Reconstruction Methodologies

Volumes 1-12 bring together seminal SAE technical papers surrounding advancements in the crash reconstruction field. Topics featured in the series include:

- Night Vision Study and

Photogrammetry • Vehicle Event Data Recorders • Motorcycle, Heavy Vehicle, Bicycle and Pedestrian Accident

Reconstruction The goal is to provide the latest technologies and methodologies being introduced into collision reconstruction - appealing to crash analysts, consultants and safety engineers alike.
