This is a book for tall people, those who relate to them, and anyone interested in height in general. Being tall coincides with considerable professional, athletic, and social benefits. Yet there are also some problems, and these raise some questions. For instance, if longer levers and more cells really are behind increased risk

of injuries and cancer, then how is it that giraffes get by? And why is it that society reveres tall stature but then compromises our safety with cramped cars and other things? And, as tall women might be pondering, where have all the tall, dark, and handsome men gone? Lastly, what can be done about all this? These questions and more will all be answered by a tall protagonist over eight chapters: Evolution, Scaling, Spine, Manufactured, Ergonomics, Growth, Longevity, and Society.

Porting heads is an art and science. It takes a craftsman's touch to shape the surfaces of the head for the optimal flow characteristics and the best performance. Porting demands the right tools, skills, and application of knowledge. Few other engine builders have the same level of knowledge and skill porting engine heads as David Vizard. All

the aspects of porting stock as well as aftermarket heads in aluminum and cast-iron constructions are covered. Vizard goes into great depth and detail on porting aftermarket heads. Starting with the basic techniques up to more advanced techniques, you are shown how to port iron and aluminum heads as well as benefits of hand and CNC porting. You are also shown how to build a high-quality flow bench at home so you can test your work and obtain professional results. Vizard shows how to optimize flow paths through the heads, past the valves, and into the combustion chamber. The book covers blending the bowls, a basic porting procedure, and also covers pocket porting, porting the intake runners, and many advanced procedures.

---

These advanced procedures include unshrouding valves, porting a shortside turn from the floor of the port down toward the valve seat, and developing the ideal port area and angle. All of these changes combine to produce optimal flow velocity through the engine for maximum power.

Most people don't start thinking about retirement until they hit 40, 50 or beyond. But what if making some simple changes in the way we live today gave us the opportunity to retire earlier and more fearlessly than we expect? Even better, what if a way existed to start enjoying life with more peace of mind, happiness and freedom right now? If you're worried

---

about your future and are tired of the rat race that seems to lead nowhere, then rightsizing might be the best way for you to reimagine your life-starting today! What is rightsizing? Rightsizing is the conscious choice to reinvent a lifestyle that more closely fits you and your family in the best possible manner at every stage of life. Rightsizing provides the freedom to let go of the daily grind of just getting by day-in and day-out. So instead of constantly striving toward more and more stuff and trying to keep up with the neighbors, rightsizing avoids unsustainable debt, stress, addiction and competition and allows us to recreate life with meaning and purpose. Rightsizing helps us each design a life that lets us spend our time and resources on whatever is most important to us. And best of all, rightsizing is about discovering what gives our life meaning,

makes us smile, and allows us to sleep well and deeply every single night. If you don't have that now, maybe it's time to rightsize your life. Rightsizing-A SMART Living 365 Guide to Reinventing Retirement is a collection of blog posts written by Kathy Gottberg on her blog SMART Living 365.com. These articles address some of her best ideas about the topic and reveal how each of us can discover our own unique version of a life focused on what truly matters.

THE BESTSELLING AUTHOR OF  
PITCH ANYTHING IS BACK TO FLIP  
YOUR ENTIRE APPROACH TO

PERSUASION. Is there anything worse than a high-pressure salesperson pushing you to say "yes" (then sign on the dotted line) before you're ready? If there's one lesson Oren Klaff has learned over decades of pitching, presenting, and closing long-shot, high-stakes deals, it's that people are sick of being marketed and sold to. Most of all, they hate being told what to think. The more you push them, the more they resist. What people love, however, is coming up with a great idea on their own, even if it's the idea you were guiding them to have all along. Often, the only way to get someone to sign is to make them feel like they're smarter than you. That's why Oren is throwing out the old playbook on persuasion.

---

Instead, he'll show you a new approach that works on this simple insight: Everyone trusts their own ideas. If, rather than pushing your idea on your buyer, you can guide them to discover it on their own, they'll believe it, trust it, and get excited about it. Then they'll buy in and feel good about the chance to work with you. That might sound easier said than done, but Oren has taught thousands of people how to do it with a series of simple steps that anyone can follow in any situation. And as you'll see in this book, Oren has been in a lot of different situations. He'll show you how he got a billionaire to take him seriously, how he got a venture capital firm to cough up capital, and how he made a skeptical Swiss

banker see him as an expert in banking. He'll even show you how to become so compelling that buyers are even more attracted to you than to your product. These days, it's not enough to make a great pitch. To get attention, create trust, and close the deal, you need to flip the script.

Buying a car can be a smart idea - a car loses the lion's share of its value when it is driven off the new car lot, so why let someone else take that loss? But buyer beware: A used car is likely to need more repairs and may come with a short warranty or none at all. In addition, used cars may lack the latest safety features. That is why it is so important for consumers to do extensive research so they can avoid all of the potential pitfalls of buying a used car. The auto experts at "Consumer Reports" have done the work for you and have compiled their extensive research and report their findings into the 2007 edition of USED CAR BUYING GUIDE. This fabulous tool will help steer any consumer who is in the market for a used car towards the better-performing and more reliable used car models and

---

away from those models with a troubled past or substandard performance. Before consumers set foot on a used car lot, they should read all the valuable information provided in this book so they can be armed with as much information as possible and the knowledge to make an educated choice. "Consumer Reports" knows cars and offers the most detailed and revealing used car reliability information available anywhere including: Unbiased reviews of every major model from 1999 - 2006- Lists of the best and worst used vehicles and how to avoid a lemon - A checklist of what to look for when inspecting a used car- Best used cars for gas mileage- Tips on negotiating the best priceReliability, recalls and crash test information- Making sense of safety information -How to get the most money when trading in your current car The

majority of this book is devoted to the profiles of 264 cars, minivans, SUVs and trucks, presenting all major 1999-2006 models. Each profile contains a photo from the representative year, a write-up of the vehicle, reliability history, crash-test data, and the model years when key safety gear was added and when a major redesign was made.

What motivates people to become involved in issues and struggles beyond their own borders? How are activists changed and movements transformed when they reach out to others a world away? This adept study addresses these questions by tying together local, national, regional, and global historical narratives surrounding the contemporary Japanese environmental movement. Spanning the era of Japanese industrial pollution in the 1960s and the more recent rise of movements addressing global environmental problems, it shows how

Japanese activists influenced approaches to environmentalism and industrial pollution in the Asia-Pacific region, North America, and Europe, as well as landmark United Nations conferences in 1972 and 1992. Japan's experiences with diseases caused by industrial pollution produced a potent "environmental injustice paradigm" that fueled domestic protest and became the motivation for Japanese groups' activism abroad. From the late 1960s onward Japanese activists organized transnational movements addressing mercury contamination in Europe and North America, industrial pollution throughout East Asia, radioactive waste disposal in the Pacific, and global climate change. In all cases, they advocated strongly for the rights of pollution victims and people living in marginalized communities and nations—a position that

---

often put them at odds with those advocating for the global environment over local or national rights. Transnational involvement profoundly challenged Japanese groups' understanding of and approach to activism. Numerous case studies demonstrate how border-crossing efforts undermined deeply engrained notions of victimhood in the domestic movement and nurtured a more self-reflexive and multidimensional approach to environmental problems and social activism. Transnational Japan in the Global Environmental Movement will appeal to scholars and students interested in the development of civil society, social movements, and environmentalism in contemporary Japan; grassroots inter-Asian connections in the postwar period; and the ways Asian countries and their citizens have shaped and been influenced

by global issues like environmentalism.
