The light-duty vehicle fleet is
expected to undergo

substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine technologies will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction

technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE

standards.

Manual on Classification of Motor Vehicle Traffic Accidents Everything

In what quickly came to be called the Battle of the Bulge, the 291st Engineer Combat Battalion found itself directly in the path of the German spearhead. With heart-stopping suspense, Colonel David Pergrin describes one of the European theater's critical delaying actions as his unit destroyed bridges, planted mines, and defended roadblocks in the face of oncoming tank columns. Here, in gritty detail, is the story of how "those damned Engineers" ruined Hitler's

winter offensive, and how the 291st, with a reputation almost as big as its accomplishments, went on to build a 1100-foot pontoon bridge across the Rhine at Remagen in 32 hours in the face of fierce opposition and near-impossible odds. Pergrin follows the battalion from its formation and training through the campaigns in France, Belgium, and Germany, making us witness the genuine heroics, skill, and spirit that lifted the 291st to the realm of legend.

A timely and multifaceted
portrait of the lawyers who
serve the diverse
constituencies of the
conservative movement,
Lawyers of the Right
explains what unites and

divides lawyers for the three
major groups—social
conservatives, libertarians,
and business advocates—that
have coalesced in recent
decades behind the
Republican Party. Drawing
on in-depth interviews with
more than seventy lawyers
who represent conservative
and libertarian nonprofit
organizations, Ann
Southworth explores their
values and identities and
traces the implications of
their shared interest in
promoting political strategies
that give lawyers leading

roles. She goes on to illuminate the function of mediator organizations—such as the Heritage Foundation and the Federalist Society for Law and Public Policy—that have succeeded in promoting cooperation among different factions of conservative lawyers. Such cooperation, she finds, has aided efforts to drive law and the legal profession politically rightward and to give lawyers greater prominence in the conservative movement. Southworth concludes, though, that tensions between

the conservative law movement’s elite and populist elements may ultimately lead to its undoing.

Matt Keegan interviews artists and commissions writing to

reassess the 1990s as the moment when the Democratic Party abandoned its New Deal values and swung to the right In the wake of the Trump election, artist Matt Keegan (born 1976) began investigating the Democratic Party's shifts over recent decades. In the late '80s, members of the Democratic Leadership Council successfully moved the party's platform to the right by including a pro-business, pro-military, interventionist agenda, and downplaying social infrastructure as a calculated break from its New Deal-era foundation. This shift led to Bill Clinton's consecutive terms. 1996 captures this pivotal time in American politics and society through the experience of

artists who completed their undergraduate studies in that year and voted for Clinton, and others who were born in 1996 and voted for the first time in 2016. Essays focus on cultural and ideological shifts from that time, such as the 1994 Crime Bill, 1996 Immigration Act, the Telecommunications Act, the start of Fox News and beyond.
