In this new view of the Citroen story, automotive/aviation writer and design specialist Lance Cole investigates not just the details of the cars of Citroen, but the aeronautical and cultural origins that lay behind Citroen's form and function. The book digs deep into the ethos of Automobiles Citroen to create a narrative on one of the greatest car manufacturers in history. Using interviews, translations, archive documents and specially-commissioned photographs, the Citroen journey is cast in a fresh perspective. It explains in detail the influences upon Citroen design: Voisin, Lefebvre, Bertoni, Boulanger, Mages, Opron and recent Citroen designers such as Coco, Blakeslee and Soubirou. As well as all the men of the great period of 1920s-1970s expansion, it also cites less well-known names of Citroen's French engineering, design, and influence such as Cayla, Gerin, Giret, Harmand, Dargent and others, to give a full picture of Citroen heritage. The book provides in-depth analysis of all major Citroen models with an engineering and design focus and profiles key individuals and cars up to the present day and Citroen's 'DS'-branded resurgence. It features many newly commissioned photographs, rare archive drawings and interviews with Citroen owners. Researched amongst leading Citroen experts and restorers, Lance Cole provides a fresh perspective on the Citroen car manufacturer, its design language and the legacy of its extraordinary engineering which will be of great interest to all Citroen and motoring enthusiasts. Superbly illustrated with 329 colour photographs, many newly commissioned along with rare archive drawings.

[Engine Management](#) Haynes Publishing

Tuning engines can be a mysterious art, all engines need a precise balance of fuel, air, and timing in order to reach their true performance potential. Engine Management: Advanced Tuning takes engine-tuning techniques to the next level, explaining how the EFI system determines engine operation and how the calibrator can change the controlling parameters to optimize actual engine performance. It is the most advanced book on the market, a must-have for tuners and calibrators and a valuable resource for anyone who wants to make horsepower with a fuel-injected, electronically controlled engine.

The descent of the Huygens probe to the frozen surface of Saturn's moon, Titan, in 2005, marks a pinnacle achievement in space exploration - the most distant planetary landing ever made or presently foreseen. The Huygens probe's seven-year voyage through space (past Venus, Earth and Jupiter) attached to the Cassini orbiter, its arrival at Saturn and three-week dormant coast to Saturn's moon, Titan, culminated in Huygens' hypersonic entry into Titan's atmosphere, 2.5-hour parachute descent, and continued operation for 72 minutes on the surface transmitting data back to Earth via the Cassini orbiter. Saturn has 62 confirmed orbiting moons, but Titan (which is larger than the planet Mercury) was chosen as a has two major components of Earth's atmosphere - nitrogen and oxygen - but the oxygen is was thought to be frozen as water ice within the body of the moon. If Titan received more sunlight, its atmosphere might well resemble that of a primitive Earth. The hope is that study of the data gathered about Titan will help us to understand how the Earth evolved, and possibly what led to the evolution of life.
