Teachers and teacher educators asked for: the latest research on literacy more information about national standards ways to consider gender in instruction advice for teaching Advanced Placement classes ideas for teaching media literacy and incorporating technology effectively into instruction even more resources for mentoring new teachers analysis of how trends in society, culture, and politics impact teachers and their classrooms. And Jim delivers. He has revamped his introductory chapters on literacy learning to include up-to-the-minute thinking from the field, and he has incorporated lists of key standards and helpful suggestions for reaching them. His practical strategies turn recent findings on literacy and gender into well-designed, research-based instruction, and his ideas help you meet the very different needs of AP students by understanding their goals and providing them with appropriate challenges.

The Language of the Birds is a masterpiece of Eastern Turkish literature (now Uzbek), and was written by one of Central Asia’s most prominent poets, Alisher Nava’i, shortly before his death in 1501. The story begins with the birds of the world realizing they are far from their king and so they begin their arduous journey with the assistance of the wise bird Hoopoe as their guide. Hoopoe listens to their complaints and excuses along the way and encourages them to seek true life even though the journey is sometimes painful. This epic poem in prose form contains many anecdotes and stories from the oral history of the Silk Road and Islam. Through this story, people are exhorted to rise above any excuse they might have in their spiritual pilgrimage. Alisher Nava’i (1441-1501) is renowned in Central Asia for his numerous writings and lasting influence in Uzbekistan as well as the contemporary Central Asian republics. In modern Uzbekistan, Nava’i is revered above all other poets and his presence is still found – streets, museums, and even a province and city are name after him. His proverbs are found throughout Central Asia and he is considered the father of the Uzbek language. His words for peace and against oppression are as timely today as they were 5 centuries ago. Nava’i lived in Herat, Afghanistan. His writings, endowments, and his life example have had lasting influence in Central Asia. In The Language of the Birds, we are introduced to what Nava’i thought is important in life. It is a world of love that goes beyond the rational and is ready to endure anything for the beloved. This book is for anyone who values great historical literature, as well as those needing inspiration in his or her own pilgrimage in life.  
The Collapse of the Soviet Union Boynton/Cook  
Water is vital for life. Since the dawn of civilization, much effort has been made to harness sources of fresh water. Recent years have raised global awareness of the need for increasing demand of water worldwide, largely because of growing population, rising standard of living, higher demand for energy, and greater appreciation for environmental quality. As an example, the world population has increased threefold in the past five decades. In order to meet the rising water demand, water resources are being developed by building large dams, reservoirs, barrages and weirs across rivers worldwide. The guiding principle for water resources development has been to ensure adequate supply of water for agriculture, domestic use (including fine drinking water), waste disposal, industries, and energy production, with due attention to maintain the ecosystem functions. This development, however, depends on a holistic, cooperative and scientific approach. The basic inputs in the assessment of water resources for a given region are from hydrological data and the subject of hydrology forms the core in achieving sustainable development of water resources. Barring a few exceptions, hydrological data for most river basins are sparse and therefore it is difficult to comprehensively assess their water resources. The major source of water is rainfall which occurs as a result of condensation of atmospheric moisture governed by the science of meteorology.

The United Nations population estimates and projections form a comprehensive set of demographic data to assess population trends at the global, regional and national levels. They are used in the calculation of many of the key development indicators commonly used by the United Nations system, including for more than one third of the indicators used to monitor progress towards the achievement of the Sustainable Development Goals. The 2019 revision of the World Population Prospects is the twenty-sixth edition of the official United Nations population estimates and projections, which have been prepared since 1951 by the Population Division of the Department of Economic and Social Affairs. The 2019 revision presents population estimates from 1950 until the present for 235 countries or areas, which have been developed through country-specific analyses of historical demographic trends. It builds on previous revisions by incorporating additional results from the 2010 and 2020 rounds of national population censuses as well as information from vital registration and recent nationally representative household sample surveys. The 2019 revision also presents population projections to the year 2100 that reflect a range of plausible outcomes at the global, regional and country levels. These Highlights summarise key population trends described by the estimates and projections presented in World Population Prospects 2019.

In this book a new theory on instruction is presented - a reflective theory of school didactics - uniquely incorporating continental German and Nordic research traditions in the theory of didactics (Didaktik), together with Anglo-American research on teaching (instructional research) and cognitivist theory. School didactics is defined as a field of research within general education. This field is limited to research and theory aiming at understanding the pedagogical practice which takes place in institutionalized educational settings guided by a curriculum collectively agreed upon. As the theory is designed to be valid for institutionalized education framed by a politically accepted curriculum, it is a culturally seen regional theory of education, not a universal one. According to this school theory the fundamental features of an institutionalized pedagogical process consist in the intentional, interactional, teaching-studying-learning process that is culturally and historically developed and situated. However, the present model does not explicitly formulate goals nor the means of educational practice. Rather, the model emphasizes the teacher and student as reflective and intentional subjects where the teacher is acting as the representative of the collective but also as the learners' advocate. Because of this the theory presented is not a normative or prescriptive theory, instead it is a reflective theory.

Organic farming is not only a philosophy; it is also a well-researched science. The second edition of The Science and Technology of Organic Farming presents the scientific basis of organic farming and the methods of application needed to

achieve adequate yields through plant nutrition and protection. Organic farming is a scientifically derived method of improving soil fertility to increase agricultural yields with limited chemical inputs. As such, it can meet public demand for reduced chemical inputs in agriculture and play a key role in meeting the needs of a growing world population. The new edition of this highly regarded book gives clear and comprehensive details on how soil fertility can be maintained and how plants can be nourished in organic agriculture. Chapters on soil fertility and plant nutrition explain the chemistry of the plant, the soil, and the soil solution and outline the importance of plant macronutrients and micronutrients. The book offers practical information on using of green manures, composts and lime to maintain soil fertility; introduces methods of tillage of land; provides organic methods of controlling weeds, insects, and diseases; and suggests how food produce can be stored without refrigeration. The text provides information on how to assess and govern the nutritional status of crops and the fertility and condition of soil and presents guidelines, recommendations, and procedures for determining the best fertility recommendations for individual situations. This edition includes an entirely new chapter on hydroponics that explains organic approaches to hydroponic crop production. With a full bibliography of references, this text is a practical guide for anyone interested in organic farming, from farmers and agricultural advisers to teachers, soil scientists, plant scientist, entomologists and students of other biological and environmental sciences.

Children's rights law is a relatively young but rapidly developing discipline. The U.N. Convention on the Rights of the Child, the field's core legal instrument, is the most widely ratified human rights treaty in history. Yet, like children themselves, children's rights are often relegated to the margins in mainstream legal, political, and other discourses, despite their application to approximately one-third of the world's population and every human being's first stages of life. Now thirty years old, the Convention on the Rights of the Child (CRC) signalled a definitive shift in the way that children are viewed and understood--from passive objects subsumed within the family to full human beings with a distinct set of rights. Although the CRC and other children's rights law have spurred positive changes in law, policies, and attitudes toward children in numerous countries, implementation remains a work in progress. We have reached a state in the evolution of children's rights in which we need more critical evaluation and assessment of the CRC and the large body of children's rights law and policy that this treaty has inspired. We have moved from conceptualizing and adopting legislation to focusing on implementation and making the content of children's rights meaningful in the lives of all children. This book provides a critical evaluation and assessment of children's rights law, including the CRC. With contributions from leading scholars and practitioners from around the world, it aims to elucidate the content of children's rights law, explore the complexities of implementation, and identify critical challenges and opportunities for children's rights law.
