This book examines the relationship between intellectual property in pharmaceuticals and access to medicines from a human rights perspective, with a view to contributing to the development of a human rights framework that can guide States in enacting and implementing intellectual property law and policy. The study primarily explores whether conflicts between patents and human rights in the context of access to medicines are inevitable, or whether patents can be made to serve human rights. What could be a normative framework that human rights might provide for patents and innovation? Joo-Young Lee argues that it is necessary to have a deepened understanding of each of the two sets of norms that govern this issue, that is, patent law and international human rights law. The chapters investigate the relevant dimensions of patent law, and analyse particular human rights bearing upon the issue of intellectual property and access to medicines. This study will be of great interest to academic specialists, practitioners or professionals in the fields of human rights, trade, and intellectual property, as well as policy makers, activists, and health professionals across the world working in intellectual property and human rights.

Creative Work Beyond the Creative Industries OECD Publishing

This edited collection examines the globally rising phenomenon of civic innovation. Combining nuanced theory with rich empirical examples, this book defines the dynamic and complex process of civic innovation as the multiple economic, political and social processes where peoples, organizations, movements and ideas are shaping struggles for global justice on the interface of capitalism. Exploring Civic Innovation for Social and Economic Transformation reflects the increasingly holistic approach to development in terms of both teaching and research, and illustrates how civic innovation happens everywhere; at the global and institutional level as well as in communities and for individuals. Through conceptual debate and narrative accounts, this book explores the new practices emerging from varying economies, transformative empowerment strategies in global value chains, local politics of social movements and the struggles for rights in regards to race, gender and sexuality. Bringing together scholars from a range of disciplines, this book would be of interest to post-graduate students of development studies, with an interest in social research.

The editors, aware of the recent work in evolutionary theory and the science of chaos and complexity, challenge the sometimes deterministic flavor of this subject. They are interested in uncovering the place of agency in these theories that take history so seriously. In the end, they are as interested in path creation and destruction as they are in path dependence. This book is compiled of both theoretical and empirical writings. It shows relatively well-known industries, such as the automobile, biotechnology, and semi-conductor industries in a new light. It also invites the reader to learn more about medical practices, wind power, lasers, and synthesizers. Primarily written for academicians, researchers, and Ph.D. students in fields related to technology management, this book is research-oriented and will appeal to all managers.

Leading in the Age of Innovations centres on the need for a more complex process-relational oriented approach to leadership. The complexity of leadership has grown significantly during the 21st century where the need to adapt to the escalating changes in our society and workplace forms one of the most important prerequisites to succeed. Leading in the Age of Innovations represents the outcomes of the lengthy scientific work that was undertaken for the past 10 years and it is still an ongoing process. This book introduces a new concept of leadership introduces a new concept of leadership based on the process and relational dimensions which resulted in the development of the Reflective Leadership concept. The new model of leadership provides a unique concept on how to bring together various disciplines and explains the overlapping relations between them. Moreover, the proposed view on leadership reflects the current evolution around the globe highlighting the importance of change and innovation. In organizations, too much focus is on the end product and the technical details of how a product is made and distributed. Less attention is focused on how people interact, and how the human capacity is effectively supported by leaders who, on the other hand, are expected to support a culture of innovation. This behavioural interaction is governed by a set of predictable values and norms. These relationships need to be understood for an organization to prosper and is thus far more important to the leadership process. Leading in the Age of Innovations seeks to establish this understanding and will be key reading to researchers, scholars and practitioners alike in the field of leadership, organizational studies and related disciplines.

Many observers have pointed out what is wrong with youth sport: an emphasis on winning at all costs; parental over-involvement; high participation costs that exclude many families; lack of vigorous physical activity; lack of player engagement; and no focus on development. Currently, most attempts at righting the wrongs of youth sport have focused on coach education and curriculum, but in this book, the authors offer a different approach—one that involves changing the game itself. Re-Designing Youth Sport combines vivid examples and case studies of innovative sport programs who are re-designing their sport with a comprehensive toolkit for practitioners on how to change their game for bigger and better outcomes. It offers a fresh and exciting perspective on the seemingly intractable issues in sport. It presents a practical and empowering pathway for readers to apply the examples and tools to the outcomes that they aspire to achieve in their sport, such as increased fun and excitement, life-skills building, gender inclusion, increased sportspersonship, greater parity

and avoidance of one-sided competition, and positive parental roles. The book also reveals how community leagues as well as national and international sport governing bodies are using re-design to accelerate player skill development, tactical awareness, and physical fitness.

After the Modernist literary experiments of her earlier work, Virginia Woolf became increasingly concerned with overt social and political commentary in her later writings, which are preoccupied with dissecting the links between patriarchy, patriotism, imperialism and war. This book unravels the complex textual histories of *The Years* (1937), *Three Guineas* (1938) and *Between the Acts* (1941) to expose the genesis and evolution of Virginia Woolf's late cultural criticism. Fusing a feminist-historicist approach with the practices and principles of genetic criticism, this innovative study scrutinizes a range of holograph, typescript and proof documents within their historical context to uncover the writing and thinking processes that produced Woolf's cultural analysis during 1931-1941. By demonstrating that Woolf's late cultural criticism developed through her literary experimentalism as well as in response to contemporary social, political and economic upheavals, this book offers a fresh perspective on her emergence as a cultural commentator in her final decade and paves the way for further genetic enquiries in the field.

Rising and changing citizen expectations, dire fiscal constraints, unfulfilled political aspirations, high professional ambitions, and a growing number of stubborn societal problems have generated an increasing demand for innovation of public policies and services. Drawing on the latest research, this book examines how current systems of public governance can be transformed in order to enhance public innovation. It scrutinizes the need for new roles and public sector reforms, and analyzes how the gradual transition towards New Public Governance can stimulate the exploration and exploitation of new and bold ideas in the public sector. It argues that the key to public innovation lies in combining and balancing elements from Classic Public Administration, New Public Management and New Public Governance, and theorizes how it can be enhanced by multi-actor collaboration for the benefit of public officials, private stakeholders, citizens, and society at large.

The post-World War II science-based technological revolution inevitably found its way into almost all international expositions with displays on atomic energy, space exploration, transportation, communications, and computers. Major advancements in Cold War science and technology helped to shape new visions of utopian futures, the stock-in-trade of world's fairs. From the 1940s to the 1980s, expositions in the United States and around the world, from Brussels to Osaka to Brisbane, mirrored Cold War culture in a variety of ways, and also played an active role in shaping it. This volume illustrates the cultural change and strain spurred by the Cold War, a disruptive period of scientific and technological progress that ignited growing concern over the impact of such progress on the environment and humanistic and spiritual values. Through the lens of world's fairs, contributors across disciplines offer an integrated exploration of the US-USSR rivalry from a global perspective and in the context of broader social and cultural phenomena—faith and religion, gender and family relations, urbanization and urban planning, fashion, modernization, and national identity—all of which were fundamentally reshaped by tensions and anxieties of the Atomic Age.

This text was developed as a book aimed at surgeons and allied health professionals that

provides an introduction to the unmet needs, epidemiological, socioeconomic and even political factors that frame Global Surgery. Following upon an understanding of these issues, the text is a practical guide that enables the reader on several levels: to work cross culturally, build relationships and negotiate the logistical challenges of bringing surgical care to low resource settings; to develop an approach to the management of various clinical conditions that would be unfamiliar to most "western" surgeons. Global Surgery is a recently coined term that encompasses many potential meanings. Most would agree that it focuses on the growing recognition of the crisis of access to quality surgical care in low resource settings. Such scenarios exist on every continent. Increasingly surgeons, allied health professionals (NGO), Public Health / Health Policy professionals as well as governmental and non-governmental organizations are engaging in this field. Many surgeons have an interest in Global Health and a desire to become involved but feel ill equipped to do so and unsure where to start. Global Surgery: The Essentials serves as a ready resource to equip surgeons to manage clinical scenarios that lie beyond the scope of their training or current practice but that they would reasonably be expected to encounter in the field.

"The United States Code is the official codification of the general and permanent laws of the United States of America. The Code was first published in 1926, and a new edition of the code has been published every six years since 1934. The 2012 edition of the Code incorporates laws enacted through the One Hundred Twelfth Congress, Second Session, the last of which was signed by the President on January 15, 2013. It does not include laws of the One Hundred Thirteenth Congress, First Session, enacted between January 2, 2013, the date it convened, and January 15, 2013. By statutory authority this edition may be cited "U.S.C. 2012 ed." As adopted in 1926, the Code established prima facie the general and permanent laws of the United States. The underlying statutes reprinted in the Code remained in effect and controlled over the Code in case of any discrepancy. In 1947, Congress began enacting individual titles of the Code into positive law. When a title is enacted into positive law, the underlying statutes are repealed and the title then becomes legal evidence of the law. Currently, 26 of the 51 titles in the Code have been so enacted. These are identified in the table of titles near the beginning of each volume. The Law Revision Counsel of the House of Representatives continues to prepare legislation pursuant to 2 U.S.C. 285b to enact the remainder of the Code, on a title-by-title basis, into positive law. The 2012 edition of the Code was prepared and published under the supervision of Ralph V. Seep, Law Revision Counsel. Grateful acknowledgment is made of the contributions by all who helped in this work, particularly the staffs of the Office of the Law Revision Counsel and the Government Printing Office"--Preface.

This practical guide reveals the nine major "fatigue factors" that can block the path to innovation success, along with solutions to energize innovation. Original advances in innovation practice and new case studies are applied to guide inventors, entrepreneurs, companies, universities, and even policy makers in conquering innovation fatigue. Cost-effective solutions include guidance on intellectual assets, dealing with disruptive innovation, and driving innovation using the "Horn of Innovation" and "Circuit of Innovation" models. A surprising view of DaVinci as an engine of open innovation is presented. Throughout the book, a unique aspect is exploring the journey of innovators, including corporate employees and entrepreneurs, at the often-overlooked personal level using the metaphor of immigrants in a strange land to identify barriers and solutions.
