In this book, modeling and control design of electric motors, namely step motors, brushless DC motors and induction motors,

are considered. The book focuses on recent advances on feedback control designs for various types of electric motors, with a slight emphasis on stepper motors. For this purpose, the authors explore modeling of these devices to the extent needed to provide a high-performance controller, but at the same time one amenable to model-based nonlinear designs. The control designs focus primarily on recent robust adaptive nonlinear controllers to attain high performance. It is shown that the adaptive robust nonlinear controller on its own achieves reasonably good performance without requiring the exact knowledge of motor parameters. While carefully tuned classical controllers often achieve required performance in many applications, it is hoped that the advocated robust and adaptive designs will lead to standard universal controllers with minimal need for fine tuning of control parameters.

This a story of love. It started when love was lost and I felt as if my world had fallen apart. What followed was a transformative journey, through the process of developing my first world tour, where I faced some of my greatest challenges, overcame some of my biggest fears, and, with the help of my incredible children, emerged a stronger person than I've ever been. This is the story of how I discovered quite simply the truest love of all.
