The Rice Genetics Collection of past symposia and other selected literature contains nearly 4,400 pages of searchable information on rice genetics and cytogenetics published by the IRRI and its partners since 1964. In addition to the five genetics symposia held at 5-year intervals since 1985, the collection contains classic publications that kicked off significant reporting on these subjects in the early 1960s. This collection is a comprehensive and historical documentation on the subject of rice genetics, spanning 45 years of research and scholarly work. Held in 2005 and published two years later, Rice Genetics V contains 23 chapters from various contributors on topics dealing with rice genetic research, including rice as a model genome for cereal research, structural genomics and resources, developmental biology and gene regulation, applied genetics, and functional genomics and rice improvement. A brief overview of the past five Rice Genetics symposia, spanning the years 1985-2005, is fittingly included at the end.

This book reviews and synthesizes the recent advances in exploiting host plant resistance to

insects, highlighting the role of molecular techniques in breeding insect resistant crops. It also provides an overview of the fascinating field of insect-plant relationships, which is fundamental to the study of host-plant resistance to insects. Further, it discusses the conventional and molecular techniques utilized/useful in breeding for resistance to insect-pests including back-cross breeding, modified population improvement methods for insect resistance, marker-assisted backcrossing to expedite the breeding process, identification and validation of new insect-resistance genes and their potential for utilization, genomics, metabolomics, transgenesis and RNAi. Lastly, it analyzes the successes, limitations and prospects for the development of insect-resistant cultivars of rice, maize, sorghum and millet, cotton, rapeseed, legumes and fruit crops, and highlights strategies for management of insect biotypes that limit the success and durability of insect-resistant cultivators in the field. Arthropod pests act as major constraints in the agro-ecosystem. It has been estimated that arthropod pests may be destroying around one-fifth of the global agricultural production/potential production every year. Further, the losses are considerably higher in the developing tropics of Asia and Africa, which are already battling severe food shortage. Integrated pest management (IPM) has emerged as the dominant paradigm for minimizing damage by the insects and non-insect pests over the last 50 years. Pest resistant cultivars represent one of the most environmentally benign, economically viable and ecologically sustainable options for utilization in IPM programs. Hundreds of insect-resistant cultivars of rice, wheat, maize, sorghum, cotton, sugarcane and other crops have been developed worldwide and are extensively grown for increasing and/or stabilizing crop productivity. The annual economic value of arthropod resistance genes developed in global agriculture has been estimated to be greater than US\$ 2 billion. Despite the impressive achievements and even greater potential in minimizing pest-related losses, only a handful of books have been published on the topic of host-plant resistance to insects. This book fills this wide gap in the literature on breeding insect-resistant crops. It is aimed at plant breeders, entomologists, plant biotechnologists and IPM experts, as well as those working on sustainable agriculture and food security.

Working as a researcher in the Vatican's Secret Archives, Father Garbaldi stumbles across a first century papyrus that claims Jesus was John the Baptist's disciple and the second Messiah who would drive out the Romans from Palestine and rule over the twelve tribes of Israel. If revealed, the papyrus could seriously undermine the Church's

position and cause widespread unrest. As a priest, Garbaldi is shocked by the revelation, but before reporting his find, he decides to validate the papyrus. He goes to see an old seminary friend in Boston to have the tractate independently dated. The Vatican secret service, The Entity, is made aware of the papyrus and sends an assassin to eliminate Garbaldi and his friend to prevent disclosure. Garbaldi survives the initial attempt on his life and seeks protection from the authorities. It is up to the FBI now to track down the assassin and grapple with the faceless men behind The Entity. A chilling thriller that will make you question your beliefs.

Environmental stresses represent the most limiting factors for agricultural productivity. Apart from biotic stress caused by plant pathogens, there are a number of abiotic stresses such as extremes in temperature, drought, salinity, heavy metals and radiation which all have detrimental effects on plant growth and yield. However, certain plant species and ecotypes have developed various mechanisms to adapt to such stress conditions. Recent advances in the understanding of these abiotic stress responses provided the impetus for compiling up-to-date reviews discussing all relevant topics in abiotic stress signaling of plants in a single volume. Topical reviews were prepared by selected experts and contain an introduction, discussion of the state of the art and important future tasks of the particular fields.

The right of governments to employ capital controls has always been the official orthodoxy of the International Monetary Fund, and the organization's formal rules providing this right have not changed significantly since the IMF was founded in 1945. But informally, among the staff inside the IMF, these controls became heresy in the 1980s and 1990s, prompting critics to accuse the IMF of indiscriminately encouraging the liberalization of controls and precipitating a wave of financial crises in emerging markets in the late 1990s. In *Capital Ideas*, Jeffrey Chwieroth explores the inner workings of the IMF to understand how its staff's thinking about capital controls changed so radically. In doing so, he also provides an important case study of how international organizations work and evolve. Drawing on original survey and archival research, extensive interviews, and scholarship from economics, politics, and sociology, Chwieroth traces the evolution of the IMF's approach to capital controls from the 1940s through spring 2009 and the first stages of the subprime credit crisis. He shows that IMF staff vigorously debated the legitimacy of capital controls and that these internal debates eventually

changed the organization's behavior--despite the lack of major rule changes. He also shows that the IMF exercised a significant amount of autonomy despite the influence of member states. Normative and behavioral changes in international organizations, Chwieroth concludes, are driven not just by new rules but also by the evolving makeup, beliefs, debates, and strategic agency of their staffs.

TRB's Transportation Research Record: Journal of the Transportation Research Board, No. 2106 includes 16 papers that explore sketch models for air transport demand estimation, supporting aircraft manufacturers to systematically formulate and implement sustainable development strategies, mixed logit analysis of international airline choice, conceptual framework for collecting online airline pricing data, quantifying the relationship between airline load factors and flight cancellation trends, and a modeling framework for airline competition in the U.S. domestic network. This issue of the TRR also examines depeaking strategies for improving airport ground operations productivity at midsize hubs, a modeling framework for airport terminal planning and performance evaluation, route choice control of automated baggage handling systems, value of flight cancellation and cancellation decision modeling, resource allocation in flow-constrained areas, prioritizing aircraft operations at congested airports, design of ground delay programs, considering hydroplaning in runway geometric design, characterizing the distribution of safety occurrences in aviation, and analysis of the workload of training captains.
