1995 Corvette. No cooling fans when engine hot. They work ok with AC on. They work when i unplug the coolant temp sensor. I put a new CTS form the dealership in. Still no fans. but still work when i unplug sensor. Fans work when i ground the dark green wire from relay to PCM. Can PCM be bad or is there another test i can do?

[How to Diagnose A Constantly Running Fan](#)

The water pump is the likely culprit. Also, check the operation of the coolant pump/valve at the top of the radiator, passenger side (I think). Usually that will only show a problem after the car has run the fans for the max cooling time with the engine off and the coolant temp has not dropped enough.
