Revisiting “The Culture of
the School and the Problem
of Change” provocatively
and seamlessly joins
Seymour Sarason’s classic,
landmark text on school
change with his own
insightful reflections on
those same issues in the

face of today’s crisis in
public schools. This is an
extensive,
monograph-length revisiting.
Part I of this book
reproduces the second
edition of Sarason’s
ground-breaking work, *The
Culture of the School and
the Problem of Change*, in
which he detailed how
change can affect a
school’s culturally diverse
environment—either through
the implementation of new
programs or as a result of
federally imposed
regulations. Throughout,
many of the major

assumptions about change in institutions are challenged. Specific events and examples demonstrate that any attempt to implement change involves some existing regularity within the school. Dr. Sarason also takes a close look at government involvement in change efforts in schooling—and includes a detailed examination of current efforts to implement PL 94–142 into public schools. He presents compelling evidence that the federal effort to change and improve schools has largely been a failure. Also included are investigations into the purposes of schooling and how these purposes can be affected by change, and the process by which educators and administrators formulate intended outcomes of change efforts. In Part II, Dr. Sarason “revisits” the text and the issues 25 years after the original publication. As he explains in his preface, to him the word crisis means “a point in time when a dangerous situation contains conflicting forces of an intensity or seriousness that in the near term will be dramatically altered depending on which forces win out. When I wrote the book a quarter century ago, I did not regard our schools as in crisis...[though] my intuition . . . was that a crisis would come sooner or later. It has, in my opinion, come.” Believing that “what happens in our cities and our schools will determine the fate of our society,” Dr. Sarason is deeply concerned that the reform arena is being manipulated by forces that are at best untroubled by and at worst intent on the dismantling of

the public school system. That, coupled with his fear that even the system's defenders are not focusing on the real issues, has infused Dr. Sarason's return to the topic of educational change with a great sense of urgency. The important things he has to say will be welcomed by all who truly care about the state of the public schools that America's children attend. Math9th Grade Mathematics; 140 Questions and Explanations For the first time in human history, we are living in an age where the youth of our nation know more about societys cutting-edge tools than the adults charged with passing societys technical and cultural knowledge on to them. Most of our young people have far more facility with computer and telecommunications technology than our teaching corps and, generally, that gap only widens as students travel from elementary school all the way to university and beyond. Its a brave new and, often, dangerous world that todays youth must learn to navigate. Now, more than ever,

they need educators to step up and teach them how to be critical thinkers able to discriminate between the true and the merely seductive, to see beyond the glossy veneer on harmful websites harmful ideas and, sadly, harmful people in both the real and cyber worlds. We need to spend a little less time teaching students how to take standardized tests and a lot more time developing their critical faculties, so they will be able to solve lifes problems, profit from challenging situations, and understand the increasingly complex world they must ken at an earlier and earlier age.
