The choices that individuals make in moments of crisis can transform them. By focusing on fictional characters trapped on fictional islands, the book examines how individuals react when forced to make hard choices within the liminal space of a "prison" island. At stake is the perception of choice: do characters believe that they have the power to choose, or do they think that they are at the mercy of fate? The results reveal certain patterns--psychological, historical, social, and political--that exist across a variety of popular/public cultures and

time periods. This book focuses on how the interplay between liminality and the Locus of Control theory creates dynamic sites of negotiated meaning. This psychological concept has never before been used for literary analysis. Offered here as an alternative to the defects of Freudian psychology, the Locus of Control theory has been proven reliable in thousands of studies, and the results have been found, with few exceptions, to be consistent in both women and men. That consistency is explored through close readings of islands found in popular culture books, films, and television shows, with suggestions for future research.

For fans of Hatchet and Island of the Blue Dolphins comes Theodore Taylor's classic bestseller and Lewis Carroll Shelf Award winner, *The Cay*. Phillip is excited when the Germans invade the small island of Curaçao. War has always been a game to him, and he's eager to glimpse it firsthand-until the freighter he and his mother are traveling to the United States on is torpedoed. When

Phillip comes to, he is on a small raft in the middle of the sea. Besides Stew Cat, his only companion is an old West Indian, Timothy. Phillip remembers his mother's warning about black people: "They are different, and they live differently." But by the time the castaways arrive on a small island, Phillip's head injury has made him blind and dependent on Timothy. "Mr. Taylor has provided an exciting story...The idea that all humanity would benefit from this special form of color blindness permeates the whole book...The result is a story with a high ethical purpose but no sermon."—New York Times Book Review "A taut tightly compressed story of endurance and revelation...At once barbed and tender, tense and fragile—as Timothy would say, 'outrageous good.'"—Kirkus Reviews * "Fully realized setting...artful, unobtrusive use of dialect...the representation of a hauntingly deep love, the poignancy of which is rarely achieved in children's literature."—School Library Journal, Starred "Starkly dramatic, believable and compelling."—Saturday Review "A tense and moving experience in reading."—Publishers Weekly "Eloquently underscores the intrinsic brotherhood of

man."—Booklist "This is one of the best survival stories since Robinson Crusoe."—The Washington Star • A New York Times Best Book of the Year • A School Library Journal Best Book of the Year • A Horn Book Honor Book • An American Library Association Notable Book • A Publishers Weekly Children's Book to Remember • A Child Study Association's Pick of Children's Books of the Year • Jane Addams Book Award • Lewis Carroll Shelf Award • Commonwealth Club of California: Literature Award • Southern California Council on Literature for Children and Young People Award • Woodward School Annual Book Award • Friends of the Library Award, University of California at Irvine

Nim lives on an island with her father, Jack, a marine iguana called Fred, a sea lion called Selkie, and their friend Alex Rover, the adventure writer.

Nim's island is the most beautiful place in the world, and she wouldn't swap live anywhere else. When Jack invites a group of scientists to visit, they bring their children as well. But two of the scientists have plans other than studying algae... By the time Nim discovers what they really want, and what they will do to get it, the children are in grave danger. And so is the island! Nim must choose between saving a natural treasure and saving someone's life.

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials,

enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Islands and Captivity in Popular Culture McGraw Hill Professional
Analyzes interviews with students, teachers, and administrators to develop a new set of literacies essential for student success in the digital age. To read John's work is to take on the role of a patient listener A book, like a piece of music, is scored for time, and I feel Time to Write is scored adagio. I believe that Time to Write can be read as a critique of [the] time-chopping approach to education and an argument for presence, for being fully open to experience, for being there To do good work, we must enter something like island time or what John calls existential time or what is sometimes called flow when we lose, at least temporarily, a sense of clock time. from the Foreword by Thomas Newkirk Twenty-five years ago, John Sylvester Lofty studied the influence of cultural time values on students' resistance to writing instruction in an isolated Maine fishing community. For the new edition of Time to Write, Lofty returned to the island to consider how social and educational developments in the intervening years may have affected both local culture and attitudes toward education. Lofty discovered how the island time values that previously informed students' literacy learning have been transformed by outside influences, including technology, social media, and the influx of new residents

from urban areas. Building on the ethnographic findings of the original study, the new edition analyzes the current conflict between the digital age time values of constant connections and instant communication, and those of school-based literacy. Lofty examines the new literacies now essential for students in a technologically connected world, both those who aspire to continue the traditional island work of lobster fishing, and for the many who now choose to pursue other careers and attend college on the mainland.

What begins as a training run with sled dogs turns into a race against time for Tatum and her new friend, a Siberian Yupik boy named Cole. When a freak blizzard hits this remote island off the coast of Alaska, the duo seeks shelter overnight in a dilapidated hunting cabin. Their harrowing ordeal goes from bad to worse when wind-driven snow forces them to risk an alternate route. Stranded in the untamed wilderness, they must rely on each other—as well as their faithful huskies—to survive sub-zero temperatures and bone-numbing exhaustion. Worse still, their food supply is dangerously low. The most daunting decision comes when the strongest dog runs away. One person must go for help, while one must stay behind. Either way, they'll both be alone in the wild for an uncertain amount of time.

Golding's iconic 1954 novel, now with a new foreword by Lois Lowry, remains one of the greatest books ever written for young adults and an unforgettable classic for readers of any age. This edition includes a new Suggestions for Further Reading by Jennifer Buehler. At the dawn of the next world war, a plane crashes on an uncharted island, stranding a group of schoolboys. At first, with no adult supervision, their freedom is something to celebrate. This far from civilization they can do anything they want. Anything. But as order collapses, as strange howls echo in the night, as terror begins its reign, the hope of adventure seems as far removed from reality as the hope of being rescued.

First released in the Spring of 1999, How People Learn has been

expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do—with curricula, classroom settings, and teaching methods—to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. *How People Learn* examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.
