We all know, that data cleaning is one of the most time-consuming stages in the data analysis process. We need to acquire missing values, check their

distribution, figure out the patterns, and make a decision on how to fill the spaces. At this point you should realize, that identification of missing data patterns and correct imputation process will influence further analysis.

Consulting employees on health and safety

So over time, Buffett developed a new mantra, which one could describe as “growth at a reasonable price (GARP)”. This involves looking for businesses and shares with growth potential that isn ...
