Dictionary of Financial Formulas and Ratios Barrons Educational Series

A practical guide to the inside language of the world of derivative instruments and risk management. Financial engineering is where technology and quantitative analysis meet on Wall Street to solve risk problems and find investment opportunities. It evolved out of options pricing, and, at this time,

is primarily focused on derivatives since they are the most difficult instruments to price and are also the riskiest. Not only is financial engineering a relatively new field, but by its nature, it continues to grow and develop. This unique dictionary explains and clarifies for financial professionals the important terms, concepts, and sometimes arcane language of this increasingly influential world of high finance and potentially high profits. John F. Marshall (New York, NY) is a Managing Partner of Marshall, Tucker & Associates, a New York-based financial engineering and consulting firm. Former Executive Director of then International Association of Financial Engineers, Marshall is the author of several books, including Understanding Swaps.

Routledge German Dictionary of Business, Commerce and Finance
Worterbuch Fur Wirtschaft, Handel und Finanzen Amacom Books
First published in 2002. The German Dictionary of Business, Commerce and Finance is the second dictionary to be published in Routledge's programme of bilingual business dictionaries. The series was launched in December 1995 with the French Dictionary of Business, Commerce and Finance. It would not have been possible to compile this dictionary within a relatively short timescale, and to the standard achieved, without the use of a highly sophisticated, custom-designed database. The database's most significant feature is that it is designed as a relational database: term records for each language are held in separate files, with further files consisting only of link records. Links between terms in different language files represent translations, enabling us to handle various types of one-to-many and many-to-one equivalences. Links between terms within a single language file represent crossreferences between geographical variants and abbreviations. The content of the database for this dictionary was created in three principal phases. A considerable proportion of the English term list was already available following the publication of the French Dictionary of Business, Commerce and Finance. The term list was then sent out to specialist translators - with current practical experience of business translation - who supplied German equivalences and expanded the English and German term lists to include the main relevant terminology in their particular spheres of work.

In the field of business, finance and economy, the English language has taken first place, even between people, institutions and countries whose respective native tongues are foreign to the English language. Spanish has become a very necessary language in different countries, thus, the combination of both languages provides an instrument of communication that is indispensable and unavoidable. This dictionary takes into account the frequent difficulties which economists, financiers, interpreters and others may have, in fully understanding the scope of a given field, expressions or even words, that in the highly specialised jargon of economics have acquired very concise meanings. Intensive research into definitions in the extremely vast field of economics, finance and business, has produced a dictionary well designed to fulfill the needs of users of a two-language dictionary.
