What I have discovered is that Kammler didn't really write a very good book for a first course in Fourier analysis. I am a math/physics major and found the book to be very scattered for a FIRST course. For example, the first chapter just dumps a whole bunch of information without presenting much background or context.

A First Course in Real Analysis. The emphasis of the presentation is on theory, but the book also contains a full treatment (with many illustrative examples and exercises) of the standard topics in infinite series, Fourier

series, multidimensional calculus, elements of metric spaces, and vector field theory.
A First Course in Machine Learning - CRC Press Book
I've been in stats courses for three years and even now get stuck whenever I try this book. It's just not a first course level/appropriate level for the title. It had good programming tips, but that's what redeems it. As for a first course in Bayesian, try kruschke's book with the puppies. It's much simpler to get through.

A First Course in Design and Analysis of Experiments This book by Gary W. Oehlert was first published in 2000 by W. H. Freeman. As of summer 2010, it has gone out of print. Curiously, I still like this book and would prefer to continue using it in my teaching; some of my colleagues feel the same way.
