? Thomas Lewis, A General Theory of Love “A person cannot direct his emotional life in the way he bids his motor system to reach for a cup. He cannot will himself to want the right thing or to love the right person or to be happy after a disappointment, or even to be happy in happy times.

In theory, all aspects of the mind are modulated by chemistry, including love. The authors briefly discuss the neurotransmitters involved in experiences of love. They point out that current biological investigations of love focus on three crucial chemicals: serotonin, opiates, and oxytocin (p. 92).
