The craft of writing and marketing a book has changed significantly over the past 10 years. It is no longer enough to just write a good book; you have to write for a specific audience and connect to your readers long before the book hits the shelves. Releasing part of your work early allows you to make adjustments to your book—or even discard your project entirely in order to invest your time into a better book idea. Using modern project management methods, you can organize your work into individual steps ("user stories"), and reuse them to market your book. Organizing the book into logical sections helps you to create preview materials for blog posts or newsletters. In addition, this will ensure that you make steady progress, avoid getting lost in the details and achieve high quality consistently throughout your book. --- Do you recognize yourself in one of these people? This book is for "Peter." - First-time author. - Has a "complete" script, "had a friend look at it," and now wants to publish it. - Might need (unsolicited) advice to properly edit it instead of just going through a "self-edit." - Needs to be reminded about the difficulties of selling a book. Has no idea about marketing. - Has not worked with an editor. - Creates his own book covers. - Would benefit from a "pep talk." This book is for "Mary." - Writes novels in Word but now wants to write a non-fiction book. - Undecided about what tools to use. - Works with an editor, but she and her editor have no real work structure. - Does not know how to market, find market niches, etc. Her past successes were random, and she never knew if her latest novel would sell or not. This book is for "John." - Professional editor seeking to expand his services from merely editing Word files to helping release books online. - Also is looking for better project management techniques to help guide an author along the way. - Often works in scientific fields and thus has to manage a lot of bibliographical references. - Spends lots of time indexing books. - Is OK with a LaTeX template but seeks to get a head start by making adjustments to it. This book is for "George." - LaTeX expert who wants to publish his work as an e-book. - Needs basic direction and then figures out the rest on his own. - Plans to do a series with a glossary and often needs to reuse blocks of text. - Needs some help in terms of book design, polishing, and graphics. - Loves to share work and collaborate with others. This book is for "Tina." - Professional self-publisher who is seeking additional ideas to improve her publishing process. - Looks for ways to establish herself as a brand and create a network of readers. This book is for "Clara." - Wants to write a book about her profession in order to establish herself as an expert but has no idea where to start. --- Table of Contents: - Great Expectations - Incorporate Books into Your Professional Career - Starting a New Book - What to Keep and What to Remove - Selecting Personas - How to Organize Your Ideas - How to Organize Your Ideas (Fiction Books) - The Rules of Your Book - How to Optimize the Work Process - How to Get Early Feedback from Readers - How We Can Help with Project Management

Using clear and concise language this book introduces new users to the use of the TeX system, in particular document preparation using LaTeX. It avoids the pitfalls of having to search through several advanced books on the subject, by collecting together the more frequently required tools and presenting these in a single accessible volume. It also describes the recent developments in multilingual typesetting using TeX that now make it straightforward for users to prepare documents in their own language and alphabet, giving the book a global readership. bookdown: Authoring Books and Technical Documents with R Markdown presents a much easier way to write books and technical publications than traditional tools such as LaTeX and Word. The bookdown package inherits the simplicity of syntax and flexibility for data analysis from R Markdown, and extends R Markdown for technical writing, so that you can make better use of document elements such as figures, tables, equations, theorems, citations, and references. Similar to LaTeX, you can number and cross-reference these elements with bookdown. Your document can even include live examples so readers can interact with them while reading the book. The book can be rendered to multiple output formats, including LaTeX/PDF, HTML, EPUB, and Word, thus making it easy to put your documents online. The style and theme of these output formats can be customized. We used books and R primarily for examples in this book, but bookdown is not only for books or R. Most features introduced in this book also apply to other types of publications: journal papers, reports, dissertations, course handouts, study notes, and even novels. You do not have to use R, either. Other choices of computing languages include Python, C, C++, SQL, Bash, Stan, JavaScript, and so on, although R is best supported. You can also leave out computing, for example, to write a fiction. This book itself is an example of publishing with bookdown and R Markdown, and its source is fully available on GitHub.
