Yes, humans and canines are different species, but current research provides fascinating, irrefutable evidence that what we share with our dogs is greater than how we vary. As behaviorist and zoologist Dr. Patricia McConnell tells us in this remarkable new book about emotions in dogs and in people, more and more scientists accept the premise that dogs have rich emotional lives, exhibiting a wide range of feelings including fear, anger, surprise, sadness, and love. In For the Love of a Dog, McConnell suggests that one of the reasons we love dogs so much is that they express emotions in ways similar to humans. After all, who can communicate joy better than a puppy? But not all emotional expressions are obvious, and McConnell teaches both beginning dog owners and experienced dog lovers how to read the more subtle expressions hidden behind fuzzy faces and floppy ears. For those of us who deeply cherish our dogs but are sometimes baffled by their behavior, For the Love of a Dog will come as a revelation—a treasure trove of useful facts, informed speculation, and intriguing accounts of man’s best friend at his worst and at his very best. Readers will discover how fear, anger, and happiness underlie the lives of both people and dogs and, most important, how understanding emotion in both species can improve the relationship between them. Thus McConnell introduces us to the possibility of a richer, more rewarding relationship with our dogs. While we may never be absolutely certain what our dogs are feeling, with the help of this riveting book we can understand more than we ever thought possible. Those who consider their dogs part of the family will find For the Love of a Dog engaging, enlightening, and utterly engrossing.

The creation of ever more realistic 3-D images is central to the development of computer graphics. The ray tracing technique has become one of the most popular and powerful means by which photo-realistic images can now be created. The simplicity, elegance and ease of implementation makes ray tracing an essential part of understanding and exploiting state-of-the-art computer graphics. An Introduction to Ray Tracing develops from fundamental principles to advanced applications, providing "how-to" procedures as well as a detailed understanding of the scientific foundations of ray tracing. It is also richly illustrated with four-color and black-and-white plates. This is a book which will be welcomed by all concerned with modern computer graphics, image processing, and computer-aided design. Provides practical "how-to" information Contains high quality color plates of images created using ray tracing techniques Progresses from a basic understanding to the advanced science and application of ray tracing

Well established as a classic reference and specialised textbook, since its first publication in 1973, Heinrich Kuttruff ’ s Room Acoustics combines detailed coverage with a state of art presentation of the theory and practice of sound behaviour in closed spaces. This sixth edition presents several additional new sections, for instance on the reflection of a spherical wave from a wall, on finite element methods for sound field calculation and on virtual reality, as well as giving an overhaul of the standard material. Particular emphasis is given to the properties and calculation of reverberation, the most obvious acoustical feature of a room. And further key topics include the various mechanisms of sound absorption and their practical application as well as scattering by wall irregularities including pseudo-stochastic structures. Extensive space is given to of psychoacoustic insights and the quality criteria derived from them, along with new procedures for the sensory assessment of concert hall acoustics. As in earlier editions, one full and updated chapter is devoted to the design and performance of electroacoustic systems which nowadays is not just a method for sound amplification but offers many possibilities for correcting acoustic deficiencies and modifying a hall ’ s natural acoustics.

This book brings together recent research on interpersonal relationships in education from a variety of perspectives including research from Europe, North America and Australia. The work clearly demonstrates that positive teacher-student relationships can contribute to student learning in classrooms of various types. Productive learning environments are characterized by supportive and warm interactions throughout the class: teacher-student and student-student. Similarly, at the school level, teacher learning thrives when there are positive and mentoring interrelationships among professional colleagues. Work on this book began with a series of formative presentations at the second International Conference on Interpersonal Relationships in Education (ICIRE 2012) held in Vancouver, Canada, an event that included among others, keynote addresses by David Berliner, Andrew Martin and Mieke Brekelmans. Further collaboration and peer review by the editorial team resulted in the collection of original research that this book comprises. The volume (while eclectic) demonstrates how constructive learning environment relationships can be developed and sustained in a variety of settings. Chapter contributions come from a range of fields including educational and social psychology, teacher and school effectiveness research, communication and language studies, and a variety of related fields. Together, they cover the important influence of the relationships of teachers with individual students, relationships among peers, and the relationships between teachers and their professional colleagues.

How We Think Triumph Books

How to use design as a tool to create not only things but ideas, to speculate about possible futures. Today designers often focus on making technology easy to use, sexy, and consumable. In *Speculative Everything*, Anthony Dunne and Fiona Raby propose a kind of design that is used as a tool to create not only things but ideas. For them, design is a means of speculating about how things could be—to imagine possible futures. This is not the usual sort of predicting or forecasting, spotting trends and extrapolating; these kinds of predictions have been proven wrong, again and again. Instead, Dunne and Raby pose “ what if ” questions that are intended to open debate and discussion about the kind of future people want (and do not want). *Speculative Everything* offers a tour through an emerging cultural landscape of design ideas, ideals, and approaches. Dunne and Raby cite examples from their own design and teaching and from other projects from fine art, design, architecture, cinema, and photography. They also draw on futurology, political theory, the philosophy of technology, and literary fiction. They show us, for example, ideas for a solar kitchen restaurant; a flypaper robotic clock; a menstruation machine; a cloud-seeding truck; a phantom-limb sensation recorder; and devices for food foraging that use the tools of synthetic biology. Dunne and Raby contend that if we speculate more—about everything—reality will become more malleable. The ideas freed by speculative design increase the odds of achieving desirable futures.

Outcast, mute, a lone twin cut from a drunk mother in a shack full of junk, Euchrid Eucrow of Ukulore inhabits a nightmarish Southern valley of preachers and prophets, incest and ignorance. When the God-fearing folk of the town declare a foundling child to be chosen by the Almighty, Euchrid is disturbed. He sees her very differently, and his conviction, and increasing isolation and insanity, may have terrible consequences for them both. . . Compelling and astonishing in its baroque richness, Nick Cave's acclaimed first novel is a fantastic journey into the twisted world of Deep Southern Gothic tragedy.

Speculative Everything John Wiley & Sons

Named one of Vulture ’ s Top 10 Best Books of 2020! Leftist firebrand Fredrik deBoer exposes the lie at the heart of our educational system and demands top-to-bottom reform. Everyone agrees that education is the key to creating a more just and equal world, and that our schools are broken and failing. Proposed reforms variously target incompetent teachers, corrupt union practices, or outdated curricula, but no one acknowledges a scientifically-proven fact that we all understand intuitively: Academic potential varies between individuals, and cannot be dramatically improved. In *The Cult of Smart*, educator and outspoken leftist Fredrik deBoer exposes this omission as the central flaw of our entire society, which has created and perpetuated an unjust class structure based on intellectual ability. Since cognitive talent varies from person to person, our education system can never create equal opportunity for all. Instead, it teaches our children that hierarchy and competition are natural, and that human value should be based on intelligence. These ideas are counter to everything that the left believes, but until they acknowledge the existence of individual cognitive differences, progressives remain complicit in keeping the status quo in place. This passionate, voice-driven manifesto demands that we embrace a new goal for education: equality of outcomes. We must create a world that has a place for everyone, not just the academically talented. But we ’ ll never achieve this

dream until the Cult of Smart is destroyed.
