The procedures in this manual distill six years of learning about the most efficient acquisition and construction methods in this country for high volume production of housing affordable to low-income people. The people in the Rehab Work Group at The Enterprise Foundation have gathered this information first-hand and conveyed it in training workshops on production management throughout the country. Over 2000 participants in the workshops have included rehab specialists from city housing departments, construction managers of single and multifamily rehab projects, program managers from both nonprofit housing development organizations and city rehab departments, as well as students in colleges and universities. They are becoming the backbone of a new cadre of effective producers of affordable housing. In the 30 cities and several rural areas where we have both learned and applied these production management techniques, they have resulted in savings of 5, 10, even 25 percent of the cost of housing development. The Enterprise Foundation is a national, nonprofit organization that my wife Patty and I launched in 1982. The Foundation's mission is to see that all very low-income Americans have the opportunity for fit and affordable housing within a generation, and work their way up and out of poverty into the main stream of American life.

International law of foreign investment is a field of public international law that has attracted considerable attention from practitioners, academics, and policy-makers in the last two decades. Its key characteristic is the extent of substantive and procedural decentralisation: while often sharing certain structural elements, both substantive obligations and mechanisms

of international dispute settlement are mostly opposable only between the particular parties, even when expressed in multilateral form. This makes a clear and comprehensive overview of the topic particularly important. The second edition adopts a new structure that better reflects the concurrence of various reform proposals with the fairly stable stratum of instruments that inform the current practice. With this systemic dynamic in mind, the selected documents are divided into three parts: Past, Present, and Future. The Past sets out the legal background to modern investment protection law. The Present provides generalist international law materials (sources and responsibility), a selection of the more important instruments with substantive investment rules, and rules of international dispute settlement regarding investment protection. The Future (new for the second edition) lists a number of possible directions of future development, including a variety of approaches that maintain the traditional procedural kernel of investor-State arbitration as well as proposals for more significant change, with non-State actor involvement in dispute settlement either rejected or moulded into a judicial mechanism. This highly regarded book is aimed at teachers, students, practitioners, and policymakers in the area. It can be used both as a practitioners' handbook and as a classroom companion for courses on international dispute settlement and investment protection law.

No other contracts are more widely used in the construction industry than the American Institute of Architects' standard forms. The American Institute of Architects Official Guide to the 2007 AIA Contract Documents offers unparalleled insight into the AIA's extensive portfolio of contract documents, helping the reader understand the forms and how to implement them. This guide is divided into two parts: Part One, The AIA Standard Documents, examines the role of AIA Contract Documents, their history, and how the documents are written and updated. It also reviews the educational and supporting resources that are part of the AIA's contract documents program; Part Two, The AIA Documents Companion, describes agreements in detail, including the purpose and rationale for provisions. Separate chapters cover the owner-contractor, contractor-subcontractor, owner-architect, and architect-consultant agreements. The guide concludes with a chapter describing pivotal legal cases that have helped shape and interpret AIA contracts. Samples of the most commonly used contracts are in print in the appendix, and an accompanying CD-ROM has samples of all AIA Contract Documents (in PDF format for Mac and PC computers) that released in 2007, as well as the Integrated Project Delivery Family of documents that released in 2008. This book is invaluable for construction project owners, attorneys, contractors, subcontractors, design professionals, and others involved in the procurement, management, and delivery of building projects. It is also recommended for students and young professionals seeking a degree, certification, or licensure.

Immunoglobulins—Advances in Research and Application: 2012 Edition Washington Third Place Winner, Design and Effectiveness Award of the Washington Publishers This lively and informative guide offers tourists, residents, and architecture aficionados alike insights into more than 400 of Washington, D.C.'s, most important landmarks. Organized into 19 discrete tours, this thoroughly redesigned and updated edition includes 45 new entries, encompassing the House of Sweden and the U.S. Institute of Peace, classic buildings that epitomize the city—the White House, the Capitol, Union Station—and a number of private buildings off the

beaten path. G. Martin Moeller, Jr., blends informed, concise descriptions with engaging commentary on each landmark, revealing often-surprising details of the buildings' history and design. Every entry is accompanied by a photograph and includes the structure's location, its architects and designers, and the corresponding dates of completion. Each entry is keyed to an easy-to-read map at the beginning of the tour. From the imposing monuments of Capitol Hill and the Mall to the pastoral suburban enclaves of Foxhall and Cleveland Park, from small memorials to vast commercial and institutional complexes, this guide shows us a Washington that is at once excitingly fresh and comfortably familiar.

The globalization of financial markets worldwide has progressively pushed toward simultaneous globalization of accounting information. Thus, during the last 50 years, categories of preparers, users, and regulators have devoted their efforts to support the global comparability of financial reporting aiming at favoring the comparison of corporates' financial performances at a cross-country level. In the same vein, IASB, national standard setters, and jurisdictions have participated in and given momentum to this process. At the same time, academic research has followed this process and tried to build a theoretical framework to address the related issues, to assess the impact on preparers, users, and regulators, while defining hindrances and obstacles to the comparability of financial reporting especially in an IFRS environment. In this context, this book reviews research studies on the comparability of financial reporting at a global level as well as highlights empirical analyses that demonstrate the extent to which global comparability has been achieved, and how it enhances value relevance of earnings across countries. It also looks at the cross-country investors' perspectives by shaping the empirical analysis to provide further insights on the role of the "Big Four" auditing services in enhancing the comparability of earnings. The book provides an original contribution to the current debate about the comparability of financial reporting under IFRS and will be useful for researchers in the field.

WHO has published a global TB report every year since 1997. The main aim of the report is to provide a comprehensive and up-to-date assessment of the TB epidemic, and of progress in prevention, diagnosis and treatment of the disease, at global, regional and country levels. This is done in the context of recommended global TB strategies and targets endorsed by WHO's Member States, broader development goals set by the United Nations (UN) and targets set in the political declaration at the first UN high-level meeting on TB (held in September 2018). The 2019 edition of the global TB report was released on 17 October 2019. The data in this report are updated annually. Please note that direct comparisons between estimates of TB disease burden in the latest report and previous reports are not appropriate. The most recent time-series of estimates are published in the 2019 global TB report.

The primary focus of this text is to provide a bridge for students between the academic world and the real world. This bridge is built through an understanding of what is law, how law is created, how law affects almost every activity of human conduct, and how legal institutions operate. Intended mainly for architectural and engineering students, but increasingly for those in business schools and law schools, this text features a clear, concise, and jargon-free presentation. It probes beneath the surface of legal rules and uncovers why these rules developed as they did, outlines arguments for and against these rules, and examines how they work in practice. Updated with the most recent developments in the legal aspects of architectural, engineering, and the construction

processes, this text is also a valuable reference for practitioners that has been cited in over twenty-five court decisions. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.
