Domain engineering is a set of activities intended to develop, maintain, and manage the creation and evolution of an area of knowledge suitable for processing by a range of software systems. It is of considerable practical significance, as it provides methods and techniques that help reduce time-to-market, development costs, and project risks on one hand, and helps improve system quality and performance on a consistent basis on the other. In this book, the editors present a collection of invited chapters from various fields related to domain engineering. The individual chapters present state-of-the-art research and are organized in three parts. The first part focuses on results that deal with domain engineering in software product lines. The second part describes how domain-specific languages are used to support the construction and deployment of domains. Finally, the third part presents contributions dealing with domain engineering within the field of conceptual modeling. All chapters utilize a similar terminology, which will help readers to understand and relate to the chapters content. The

book will be especially rewarding for researchers and students of software engineering methodologies in general and of domain engineering and its related fields in particular, as it contains the most comprehensive and up-to-date information on this topic.

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

Unbekannte Preziosen Wenn Autofirmen Studien und Prototypen zeigen, erlauben sie damit einen Blick hinter den Vorhang, eine Vision von dem, was kommt oder kommen könnte. Neben dem, was bei offiziellen Terminen und auf Messen gezeigt wird, gibt es aber eine überwältigende Menge von Entwürfen und Modellen, die der Öffentlichkeit aus verschiedensten Gründen verborgen bleiben. In diesem Buch wird das unmögliche möglich: ein Blick auf noch nie gesehene Porsche - Porsche Unseen. Stefan Bogner durfte exklusiv im Allerheiligsten des Porsche Designs fotografieren und beschert uns absolute Aha-Momente. Die Porsche-DNA ist in jedem der gezeigten Modelle erkennbar, die Ausführung aber so neu und zum Teil so unerwartet, dass man meint, in einem Paralleluniversum gelandet zu sein. Ein 1-Liter-Auto von Porsche? Ein coupéhafter 4-Sitzer mit 911-Zügen? Einzige Roadster mit dem Geist der 50er-Jahre? Das alles hat Stefan Bogner im Modell oder sogar fahrfertig vor der Linse gehabt. Die erhellenden Hintergründe hat Jan Baedeker im persönlichen Gespräch mit Designchef Michael Mauer notiert. Folgen Sie uns auf eine unvergleichliche Entdeckungsreise durch die Welt des Porsche Designs! Zweisprachig: Deutsch/Englisch Unknown valuables When car companies present studies and prototypes, they allow a glimpse behind the scenes, a vision of what will come or might come. Apart from what is shown on official events and at fairs, there is an overwhelming number of drafts and models, that remain hidden from the public for various reasons. This book achieves the impossible: a look at Porsche cars the public never laid eyes on - Porsche Unseen. Stefan Bogner was exclusively allowed to take pictures in the Porsche Design sanctum, aha-experiences guaranteed. The Porsche DNA is recognisable in any of the models shown, but the design is so new and unexpected that it suggests the existence of a parallel universe. A 1-litre Porsche? A coupé-like four seater with 911-looks? Single-seated roadsters with 50's flair? Stefan Bogner took photos of all of them - either as models or ready to drive. Jan Baedeker talked with Michael Mauer, Head of Design, and took down the enlightening background information. Join our extraordinary expedition of discovery through the world of Porsche Design!

The teen years bring formidable opportunities and challenges. Facing them is easier when youth have tools to apply to their experiences, and well-established personal values and character traits. Stories illustrate the importance of controlling emotions, correcting mistakes, appreciating close family life and living without prejudice.
