This book constitutes the refereed proceedings of the 21st IFIP WG 5.5 Working Conference on Virtual Enterprises, PRO-VE 2020, held in Valencia, Spain, in November 2020. The conference was held virtually. The 53 full papers were carefully reviewed and selected from 135 submissions.

They provide a comprehensive overview of major challenges and recent advances in various domains related to the digital transformation and collaborative networks and their applications with a strong focus on the following areas related to the main theme of the conference: collaborative business ecosystems; collaborative business models; collaboration platform; data and knowledge services; blockchain and knowledge graphs; maintenance, compliance and liability; digital transformation; skills for organizations of the future; collaboration in open innovation; collaboration in supply chain; simulation and analysis in collaborative systems; product and service systems; collaboration impacts; boosting sustainability through collaboration in Agri-food 4.0; digital innovation hubs for

digitalizing European industry; and collaborative networks for health and wellness data management.

Superstar singer, bestselling cookbook author, and cooking show host Patti LaBelle shares her favorite dessert recipes and kitchen memories. Her New York Times bestseller LaBelle Cuisine: Recipes to Sing About, which sold more than 300,000 copies, established her as a cooking star. Today, Patti's baking skills have the country buzzing. In Fall 2015, a fan's YouTube review of her sweet potato pie became a viral sensation, with over 20 million views. In just one weekend, her pies were completely sold out at Wal-Mart stores across the

country. Now, for the first time, fans of Patti's pie can make their own, as well as other amazing sweets! Filled with her favorite recipes for pies, cakes, cookies, and puddings, as well as a chapter on diabetic-friendly recipes, moving personal stories from her career and life, this is the most personal cookbook LaBelle has written. Every fan of soul and sweets will want to own it.

Do you wonder how movies – sequences of static frames – appear to move, or why 3-D films look different from traditional movies? Why does ventriloquism work, and why can airliner flights make you feel disoriented? The answers to these and other questions about the human senses can be found within the pages of Foundations of Sensation and Perception. This third edition maintains the standard for clarity and accessibility combined with rigor which was set in previous editions, making it suitable for a wide range of students. As in the previous editions, the early chapters allow students to grasp fundamental principles in relation to the relatively simple sensory systems (smell, taste, touch and

balance) before moving on to more complex material in hearing and vision. The text has been extensively updated, and this new edition includes: a new chapter devoted to attention and perception over 200 new references over 30 new figures and improved, more colorful, visual presentation a new companion website with a range of resources for students and lecturers The book contains a range of pedagogical features, including tutorial sections at the end of each chapter. This distinctive feature introduces areas of the subject which are rarely included in student texts, but are crucial for establishing a firm foundation of knowledge. Some tutorials are devoted to more advanced and technical topics (optics, light measurement, Bayesian inference), but treated in an accessible manner, while others cover topics a little outside of the mainstream (music perception, consciousness, visual art). Foundations of Sensation and Perception will enable the reader to achieve a firm grasp of current knowledge concerning the processes that underlie our perception of the world and will be an invaluable resource for those studying psychology, neuroscience, and

related disciplines.

Springer Science & Business Media Perspectives in Lung Cancer compiles basic and advanced topics on lung cancer pathology and treatment in a single volume. Chapters introduce the reader to chest and lung anatomy followed by the biology of lung cancer. Subsequent chapters delve into diagnostic methods for lung cancer while progressing into treatment options. The book culminates into an explanation of the concept of the Lung Cancer Centre, which is a representation of the editors' vision for organizing a lung cancer treatment unit. Key features: *Organises key topics covering both standard and avante-garde topics related to lung cancer *All contributions are presented by experts in lung cancer treatment *Addresses basic biology of lung cancer *Provides information about 3D surgical planning, a relatively new concept in the field of thoracic surgery *Addresses the standard method of resection, VATS and Mini VATS *Covers the role of radiation and systemic anti-cancer therapies in lung cancer treatment *Provides a glimpse of modern methods such as image guided surgery and therapy, laser therapy, and photodynamic therapy *Covers the role of palliative care for lung cancer *Presents information about a visionary organization of a lung cancer unit and

treatment centre. The combination of carefully organised chapters covering a wide array of topics makes this reference an essential reference for healthcare professionals interested in acquiring a broad perspective on lung cancer treatment with the goal of improving patient outcomes.

This book constitutes the refereed proceedings of the 6th IFIP WG 5.5/SOCOLNET Doctoral Conference on Computing, Electrical and Industrial Systems, DoCEIS 2015, held in Costa de Caparica, Portugal, in April 2015. The 54 revised full papers were carefully reviewed and selected from 119 submissions. The papers present selected results produced in engineering doctoral programs and focus on development and application of cloud-based engineering systems. Research results and ongoing work are presented, illustrated and discussed in the following areas: collaborative networks; cloud-based manufacturing; reconfigurable manufacturing; distributed computing and embedded systems; perception and signal processing; healthcare; smart monitoring systems; and renewable energy and energy-related management, decision support, simulation and power conversion.

This guide enables engineers and engineering managers to communicate effectively with financial professionals, while offering a balanced presentation of the basics of engineering economic analysis. **KEY TOPICS:** Focuses on real management situations. Provides accounting/cost accounting fundamentals to measure results. Introduces the concept of "options analysis" applied to capital investment decisions. Aids in conducting economic analyses with liberal use of spreadsheets. Introduces tax considerations and their consequences. **MARKET:** For those interested in learning more about capital investment decision methodologies, particularly engineers and engineering managers.

When work began on the first volume of this text in 1992, the science of distribution management was still very much a backwater of general management and academic thought. While most of the body of knowledge associated with calculating EOQs, fair-shares inventory deployment, productivity curves, and other operations management techniques had long been solidly established, new thinking about distribution management had

taken a definite back-seat to the then dominant interest in Lean thinking, quality management, and business process reengineering and their impact on manufacturing and service organizations. For the most part, discussion relating to the distribution function centered on a fairly recent concept called Logistics Management. But, despite talk of how logistics could be used to integrate internal and external business functions and even be considered a source of competitive advantage on its own, most of the focus remained on how companies could utilize operations management techniques to optimize the traditional day-to-day shipping and receiving functions in order to achieve cost containment and customer fulfillment objectives. In the end, distribution management was, for the most part, still considered a dreary science, concerned with transportation rates and cost trade-offs. expediting and the tedious calculus Today, the science of distribution has become perhaps one of the most important and exciting disciplines in the management of business.

In this work, the authors present a global perspective on the methods available for analysis and design of non-linear control systems and detail specific applications.

They provide a tutorial exposition of the major non-linear systems analysis techniques followed by a discussion of available non-linear design methods. *ASAP World History: A Quick-Review Study Guide for the AP Exam* Springer

Reinforcement learning encompasses both a science of adaptive behavior of rational beings in uncertain environments and a computational methodology for finding optimal behaviors for challenging problems in control, optimization and adaptive behavior of intelligent agents. As a field, reinforcement learning has progressed tremendously in the past decade. The main goal of this book is to present an up-to-date series of survey articles on the main contemporary sub-fields of reinforcement learning. This includes surveys on partially observable environments, hierarchical task decompositions, relational knowledge representation and predictive state representations. Furthermore, topics such as transfer, evolutionary methods and continuous spaces in reinforcement learning are surveyed. In addition, several chapters review reinforcement learning methods in robotics, in games, and in

computational neuroscience. In total seventeen different subfields are presented by mostly young experts in those areas, and together they truly represent a state-of-the-art of current reinforcement learning research. Marco Wiering works at the artificial intelligence department of the University of Groningen in the Netherlands. He has published extensively on various reinforcement learning topics. Martijn van Otterlo works in the cognitive artificial intelligence group at the Radboud University Nijmegen in The Netherlands. He has mainly focused on expressive knowledge representation in reinforcement learning settings.

This book constitutes the refereed proceedings of the 18th IFIP WG 5.5 Working Conference on Virtual Enterprises, PRO-VE 2017, held in Vicenza, Italy, in September 2017. The 68 revised full papers were carefully reviewed and selected from 159 submissions. They provide a comprehensive overview of identified challenges and recent advances in various collaborative network (CN) domains and their applications, with a strong focus on the following areas: collaborative models, platforms and systems for data-rich worlds; manufacturing ecosystem and collaboration in Industry 4.0; big data analytics

and intelligence; risk, performance, and uncertainty in collaborative data-rich systems; semantic data/service discovery, retrieval, and composition in a collaborative data-rich world; trust and sustainability analysis in collaborative networks; value creation and social impact of collaboration in data-rich worlds; technology development platforms supporting collaborative systems; collective intelligence and collaboration in advanced/emerging applications: collaborative manufacturing and factories of the future, e-health and care, food and agribusiness, and crisis/disaster management.

We are overstressed, overworked and overtired – and things aren't getting any easier. The days are getting shorter while our to-do lists are getting longer. The pace of life gets faster and the demands increase. We attempt to fight back with caffeinated drinks and candy bars hoping to get it all done before we crash. This is false energy...but Jon Gordon gives us the real thing. Gordon encourages us to become Energy Addicts using a few or all of the simple, effective physical, mental, and spiritual strategies in this book, including: Eat early and well, hydrate, exercise, nap, connect with nature Neutralize energy vampires, master the flow of money, embrace the energy of silence Connect (with others and yourself), lead with your heart, learn to love and challenge life

Practical, common-sense, sometimes counterintuitive, Jon Gordon shows how we can become addicted to positive energy and habits, making small changes in our lives that will produce big results.

What good are the facts and figures of managerial accounting if the people who need them can't use them? More and more organizations are realizing that activity based costing is a superior method for both identifying improvement opportunities and measuring the realized benefits of performance initiatives. ABC data helps you see that time, quality, capacity, flexibility, and cost are interconnected and also allows you to navigate through management fads and into the faster currents of high-payback performance. ABC offers a superior product and service costing technique with substantially more realistic cost assignments and much greater accuracy. It gives you better insights to manage your product design and manage costs. It can even be used for performance measurements. ABC represents a significant change in corporate systems and

can be challenging to implement. Activity-Based Cost Management: Making It Work will walk you through the process so you can overcome barriers and successfully implement ABC. Activity-Based Cost Management: Making It Work doesn't just explain what ABC is, it shows you the mathematical calculations that support ABC and how you can implement ABC into your organization.

Encompassing Amazonian rainforests, Andean peaks, coastal lowlands, and the Galápagos Islands, Ecuador's geography is notably diverse. So too are its history, culture, and politics, all of which are examined from many perspectives in The Ecuador Reader. Spanning the years before the arrival of the Spanish in the early 1500s to the present, this rich anthology addresses colonialism, independence, the nation's integration into the world economy, and its tumultuous twentieth century. Interspersed among forty-eight written selections are more than three dozen images. The voices and creations of Ecuadorian politicians, writers, artists, scholars, activists, and journalists fill the Reader, from José María Velasco Ibarra, the nation's ultimate populist and five-time president, to Pancho Jaime, a political satirist; from Julio Jaramillo, a popular twentieth-century singer, to anonymous indigenous women artists who produced ceramics in the 1500s; and from the

poems of Afro-Ecuadorians, to the fiction of the vanguardist Pablo Palacio, to a recipe for traditional Quiteño-style shrimp. The Reader includes an interview with Nina Pacari, the first indigenous woman elected to Ecuador's national assembly, and a reflection on how to balance tourism with the protection of the Galápagos Islands' magnificent ecosystem. Complementing selections by Ecuadorians, many never published in English, are samples of some of the best writing on Ecuador by outsiders, including an account of how an indigenous group with non-Inca origins came to see themselves as definitively Incan, an exploration of the fascination with the Andes from the 1700s to the present, chronicles of the less-than-exemplary behavior of U.S. corporations in Ecuador, an examination of Ecuadorians' overseas migration, and a look at the controversy surrounding the selection of the first black Miss Ecuador.

The New York Times–bestselling novel by the critically acclaimed author of Native Speaker, A Gesture Life and My Year Abroad. At 59, Jerry Battle is coasting through life. His favorite pastime is flying his small plane high above Long Island. Aloft, he can escape from the troubles that plague his family, neighbors, and loved ones on the ground. But he can't stay in the air forever. Only months before his 60th birthday, a culmination of family crises finally pull Jerry down from his emotionally distant course. Jerry learns that his family's stability is in jeopardy. His father, Hank,

is growing increasingly unhappy in his assisted living facility. His son, Jack, has taken over the family landscaping business but is running it into bankruptcy. His daughter, Theresa, has become pregnant and has been diagnosed with cancer. His longtime girlfriend, Rita, who helped raise his children, has now moved in with another man. And Jerry still has unanswered questions that he must face regarding the circumstances surrounding the death of his late wife. Since the day his wife died, Jerry has turned avoiding conflict into an art form—the perfect expression being his solitary flights from which he can look down on a world that appears serene and unscathed. From his comfortable distance, he can't see the messy details, let alone begin to confront them. But Jerry is learning that in avoiding conflict, he is also avoiding contact with the people he loves most.

Most of the familiar headache drugs are used to stop a headache attack that is already in progress, or about to begin. However, there is now a growing body of research aimed at developing medications that can be taken on a regular basis to prevent headaches from starting. These drugs will be targeted at patients whose headaches are frequent or who get their headaches at predictable times. This book reviews the potential for prophylactic

treatment of headache. It provides most of the existing evidence in the field of pharmaco-prophylaxis of migraine and other chronic headaches and may thus, serve as a platform for new initiatives in the field. The book reviews the research into the pharmacological mechanisms involved, the classes of drugs in development and the clinical trials methodology. The editors have gathered together the leading international experts to produce a book that will appeal to neurologists caring for headache patients, researchers in the field and those based in the pharmaceutical industry.

Winner of a Shingo Research and Professional Publication Award Lean Production Simplified, Second Edition is a plain language guide to the lean production system written for the practitioner by a practitioner. It delivers a comprehensive insider's view of lean

manufacturing. The author helps the reader to grasp the system as a whole and the factors that animate it by organizing the book around an image of a house of lean production. Highlights include: A comprehensive view of Toyota's lean manufacturing system A look at the origins and underlying principles of lean Identifying the goals of lean production Practical problem solving for lean production Activities that support involvement - Kaizen circles, suggestion systems, and problem solving This second edition has been updated with expanded information on the Lean Improvement Process; Production Physics and Little's Law - the fundamental equation for both manufacturing and service industries (cycle time = work in process/throughput); Value Stream Thinking - combining processes required to bring the product or service to the customer; Hoshin Planning -- using the Planning and Execution Tree diagram and Problem Solving -- including the "Five Why" method and how to use it. Lean Production Simplified, Second Edition covers each of the components of lean within the context of the entire lean production system. The author's straightforward common sense approach makes this book an easily accessible on-the-floor resource for every operator.
