For more than forty years the series of International Colloquia on Stability and Ductility of Steel Structures has been supported by the Structural Stability Research Council (SSRC). Its objective is to present the latest results in theoretical, numerical and experimental research in the area of stability and ductility of steel and steel-concrete composite structures. In Stability and Ductility of Steel Structures 2019, the focus is

on new concepts and procedures concerning the analysis and design of steel structures and on the background, development and application of rules and recommendations either appearing in recently published Codes or Specifications and in emerging versions, all in anticipation of the new edition of Eurocodes. The series of International Colloquia on Stability and Ductility of Steel Structures started in Paris in 1972, the last five being held in: Timisoara, Romania (1999), Budapest, Hungary (2002), Lisbon, Portugal (2006), Rio de Janeiro, Brazil (2010) and Timisoara, Romania (2016). The 2019 edition of SDSS is organized by the Czech Technical University in Prague.

practitioners develop sound research skills to enhance their knowledge and practice. Written by Dean Whitehead and Caleb Ferguson, the 6th ANZ edition includes the most recent updates and developments in Australian and New Zealand nursing and midwifery practice, with a focus on evidence-based practice, along with a range of contemporary research articles and pedagogy to support specific chapter content. Using clear language and examples, the 6th edition of *Nursing and Midwifery Research* provides a valuable resource to assist healthcare students and practitioners in developing strong skills in research literacy and critical appraisal, as well as the confidence to successfully conduct research and apply outcomes to practice. A focus on digital communication - includes overviews and tips on navigating professional and personal electronic media Individual and group activities throughout to encourage skill development, reflection and awareness of self and others An extensive suite of scenarios - practise and apply your communication skills using realistic situations and individuals that healthcare professionals encounter in clinical practice Additional resources on Evolve eBook on VitalSource Instructor resources: Answer guides to Tutorial Triggers PowerPoint presentations Student and Instructor resources: Answer guides to An Unexpected Hurdle Answers to Learning Activities Research Articles and Questions Answer guides to Time to Reflect Glossary New co-

This Wayfinding system audit is a practical and comprehensive approach to wayfinding, using an inclusive design approach. It includes a 'design audit and checklist' to assist designers, developers and property owners and managers identify ways to improve access to, into and through new or existing properties, particularly buildings and large complex facilities and particularly for people who are blind or vision impaired.

Flat glass opens up more possibilities for the planner than virtually any other material. Because of the technological complexity of using it, however, no specific structural forms have been developed for glass supporting frameworks as they have been for wood, concrete, and steel. This book is thus the first to present a coherent guide to the planning and design of glass supporting frameworks. The focus is on the pressure-resistant, flat supporting element as a basic building block for broad supporting structures. The spatial and constructive forms of multifunctional, self-supporting glass envelopes are vividly illustrated and

systematically explained. The constructions presented exhibit new aesthetic qualities, based not on the dictum of "dematerialization" but on the poetry of gleaming and transparent planes. They ring in a new chapter in the history of glass architecture.

Protecting the natural environment and promoting sustainability have become important objectives, but achieving such goals presents myriad challenges for even the most committed environmentalist. *American Environmentalism: Philosophy, History, and Public Policy* examines whether competing interests can be reconciled while developing consistent, coherent, effective public policy to regulate

---

uses and protection of the natural environment without destroying the national economy. It then reviews a range of possible solutions. The book delves into key normative concepts that undergird American perspectives on nature by providing an overview of philosophical concepts found in the western intellectual tradition, the presuppositions inherent in neoclassical economics, and anthropocentric (human-centered) and biocentric (earth-centered) positions on sustainability. It traces the evolution of attitudes about nature from the time of the Ancient Greeks through Europeans in the Middle Ages and the Renaissance, the Enlightenment and the American Founders, the nineteenth and twentieth centuries, and up to the present. Building on this foundation, the author examines the political landscape as non-governmental organizations (NGOs), industry leaders, and government officials struggle to balance industrial development with environmental concerns. Outrageous claims, silly misrepresentations, bogus arguments, absurd contentions, and overblown prophecies of impending calamities are bandied about by many parties on all sides of the debate—industry spokespeople, elected representatives, unelected regulators, concerned citizens, and environmental NGOs alike. In lieu of descending into this morass, the author circumvents the silliness to explore the crucial issues through a more focused, disciplined approach. Rather than engage in acrimonious debate over minutiae, as so

---

often occurs in the context of "green" claims, he recasts the issue in a way that provides a cohesive look at all sides. This effort may be quixotic, but how else to cut the Gordian knot?

Glass In Buildings is a fully illustrated, up-to-date handbook covering the inclusive design criteria for the different uses of glass in buildings. It offers practical guidance to help

designers, specifiers and facilities managers to understand the different types of glass available, related legislation, building regulations and standards, as well as operation and maintenance issues. The design guidance is supported by case study examples that illustrate how different inclusive design issues are resolved in a range of situations.

Written to the UOC for the new CIII Carpentry CPC30220 and Joinery training package, Carpentry Skills for Certificate III 2e is industry focused, with comprehensive coverage of relevant and current industry trends, building and construction standards and regulations. The new edition features: - Workplace Scenarios to engage students and help them visualise concepts - Check your understanding questions and end-of-chapter activities in each chapter - End-of-chapter Australian building

---

codes and standards enable students to refer to the related building code standards - Worksheets on the 35 Units of Competency and based on the Performance Criteria for each UOC. - A comprehensive fully updated Instructor Resource Manual which includes an Implementation Guide, competency mapping guide, solutions to the check your understanding and end of chapter questions, and a YouTube playlist (3-5 videos per UOC) to help explain complex concepts with questions to check students understanding. The text is a new addition to our building and construction series that also includes a new Certificate II text which published in 2020. Glass in Buildings Springer Science & Business Media

Shield Tunnel Engineering: From Theory to Practice is a key technique that offers one of the most important

ways to build tunnels in fast, relatively safe, and ecologically friendly ways. The book presents state-of-the-art solutions for engineers working within the field of shield tunnelling technology for railways. It includes expertise from major projects in shield tunnel construction for high-speed rail, subways and other major projects. In particular, it presents a series of advances in shield muck conditioning technology, slurry treatment, backfill grouting, and environmental impact and control. In this volume, foundational knowledge is combined with the latest advances in shield tunnel engineering. Twelve chapters cover key areas including geological investigation, the types,

---

structures and workings of shield machines, selecting a machine, shield segment design, shield tunnelling parameter control, soil conditioning for earth pressure balance (EPB) shield tunnelling, shield slurry treatment, backfill grouting, environmental impact, and problems in shield tunnel structures and their amelioration. This book presents the essential knowledge needed for shield tunnel engineering, the latest advances in the field, and practical guidance for engineers. Presents the foundational concepts of shield tunnel engineering Gives the latest advances in shield tunnel engineering techniques Considers common problems in shield tunnel

structures and their solutions Lays out step-by-step guidance for engineers working with shield tunnelling Assesses environmental impacts and their control in shield tunnel engineering

A Comprehensive and Self-Contained Treatment of the Theory and Practical Applications of Ceramic Materials When failure occurs in ceramic materials, it is often catastrophic, instantaneous, and total. Now in its Second Edition, this important book arms readers with a thorough and accurate understanding of the causes of these failures and how to design ceramics for failure avoidance. It systematically covers: Stress and strain Types of mechanical behavior Strength of defect-free solids Linear elastic fracture

researchers and practitioners largely from Australasia and the Asia-Pacific region. The topics under discussion include: composite structures and materials; computational mechanics; dynamic analysis of structures; earthquake engineering; fire engineering; geomechanics and foundation engineering; mechanics of materials; reinforced and prestressed concrete structures; shock and impact loading; steel structures; structural health monitoring and damage identification; structural mechanics; and timber engineering. It is a valuable reference for academics, researchers, and civil and mechanical engineers working in structural and material engineering and mechanics.

This Standard sets out a method to measure the leakage of cold and warm smoke from one side of a door assembly to the other under the specified test conditions. The Test can be applied to door and shutter assemblies of different types intended for purposes of controlling the passage of smoke in case of fire and of providing fire resistance.

cities is discussed at the beginning of the book. Innovative case studies of underground cities and floating city bridges are presented in this book. BIM and GIS applications on different projects, and the concept of intelligent contract and virtual reality are discussed. Two concepts relevant to conventional buildings including private open spaces and place attachments are also included, and these topics can be upgraded in the future by smart technologies.
