The Iliad is an ancient Greek epic poem in dactylic hexameter, traditionally attributed to Homer. Set during the Trojan War, the ten-year siege of the city of Troy (Ilium) by a coalition of Greek states, it tells of the battles and events during the weeks of a quarrel between King Agamemnon and the warrior Achilles.

"[The book] has been designed for one- and two-semester courses for undergraduates majoring in biochemistry and related disciplines, as well as for graduate students who require a broad introduction to biochemistry. It is also suited for courses at medical, dental, veterinary, pharmacy, and other professional schools. The book will be used most successfully by students who have completed two years of college-level chemistry, including organic chemistry, and have received at least an introduction to biology. While some background in physics and physical chemistry would be useful, all relevant principles are introduced in a manner that should make them accessible to most students"--Preface.

Indian Political Theory GLOBAL ACADEMY YAYINCILIK VE DANI MANLIK H ZMETLER SANAY T CARET L M TED RKET

At present, a nativist turn in Indian political theory can be observed. There is a general assumption that the indigenous thought to which researchers are supposed to be (re)turning may somehow be immediately visible by ignoring the colonization of the mind and polity. In such a conception of svaraj (which can be translated as 'authentic autonomy'), the tradition to be returned to would be that of the indigenous elites. In this book, this concept of svaraj is defined as a thick conception, which links it with exclusivist notions of spirituality, profound anti-modernity, exceptionalistic moralism, essentialistic nationalism and purism. However, post-independence India has borne witness to an alternative trajectory: a thin svaraj. The

author puts forward a workable contemporary ideal of thin svaraj, i.e. political, and free of metaphysical commitment. The model proposed is inspired by B.R. Ambedkar's thoughts, as opposed to the thick conception found in the works of M.K. Gandhi, KC Bhattacharya and Ramachandra Gandhi. The author argues that political theorists of Indian politics continue to work with categories and concepts alien to the lived social and political experiences of India's common man, or everyday people. Consequently, he emphasises the need to decolonize Indian political theory, and rescue it from the grip of western theories, and fascination with western modes of historical analysis. The necessity to avoid both universalism and relativism and more importantly address the political predicaments of 'the people' is the key objective of the book, and a push for a reorientation of Indian political theory. An interesting new interpretation of a contemporary ideal of svaraj, this analysis takes into account influences from other cultures and sources as well as eschews thick conceptions that stifle imaginations and imaginaries. This book will be of interest to academics in the fields of philosophy, political science, sociology, literature and cultural studies in general and contemporary political theory, South Asian and Indian politics and political theory in particular.

Encyclopedia of Criminal Activities and the Deep Web CRC Press

An introductory textbook exploring the subject of Lagrangian and Hamiltonian dynamics, with a relaxed and self-contained setting. Lagrangian and Hamiltonian dynamics is the continuation of Newton's classical physics into new formalisms, each highlighting novel aspects of mechanics that gradually build in complexity to form the basis for almost all of theoretical physics.

Lagrangian and Hamiltonian dynamics also acts as a gateway to more abstract concepts routed in differential geometry and field theories and can be used to introduce these subject areas to newcomers. Journeying in a self-contained manner from the very basics, through the fundamentals and onwards to the cutting edge of the subject, along the way the reader is supported by all the necessary background mathematics, fully worked examples, thoughtful and vibrant illustrations as well as an informal narrative and numerous fresh, modern and inter-disciplinary applications. The book contains some unusual topics for a classical mechanics textbook. Most notable examples include the 'classical wavefunction', Koopman-von Neumann theory, classical density functional theories, the 'vakonomic' variational principle for non-holonomic constraints, the Gibbs-Appell equations, classical path integrals, Nambu brackets and the full framing of mechanics in the language of differential geometry.

This book unveils forestry science and its policy and management that connect past and present understanding of forests. The aggregated knowledge is presented to cover the approaches adopted in studying forest structure, its growth, functioning, and degradation, especially in the context of the surrounding environment. The application of advance computation, instrumentation, and modelling has been elaborated in various chapters. Forest ecosystems are rapidly changing due to forest fires, deforestation, urbanization, climate change, and other natural and anthropogenic drivers.

Understanding the dynamics of forest ecosystems requires contemporary methods and measures, utilizing modern tools and big data for developing effective conservation plans. The book also covers discussion on policies for sustainable forestry, agroforestry, environmental governance, socio-ecology, nature-based solutions, and management implication. It is suitable for a wide range of readers working in the field of scientific forestry, policy making, and

forest management. In addition, it is a useful material for postgraduate and research students of forestry sciences.
