We were very pleased to once again extend to the delegates and, we are pleased to th say, our friends the warmest of welcomes to the 8 International Conference on Knowledge-Based Intelligent Information and Engineering Systems at Wellington - stitute of Technology in Wellington, New Zealand. The KES conferences attract a wide range of interest. The broad focus of the c- ference series is the theory and applications of computational intelligence and em- gent technologies. Once purely a research field, intelligent systems have advanced to the point where their abilities have been incorporated into many conventional appli- tion areas. The quest to encapsulate human knowledge and capabilities in domains such as reasoning, problem solving, sensory analysis, and other complex areas has been avidly pursued. This is because it has been demonstrated that these abilities have definite practical applications. The techniques long ago reached the point where they are being exploited to provide commercial advantages for companies and real beneficial effects on profits. KES 2004 provided a valuable mechanism for delegates to obtain a profound view of the latest intelligent systems research into a range of - gorithms, tools and techniques. KES 2004 also gave delegates the chance to come into contact with those applying intelligent

systems in diverse commercial areas. The combination of theory and practice represents a uniquely valuable opportunity for -preciating the full spectrum of intelligent-systems activity and the “ state of the art ” .

This volume introduces new approaches in intelligent control area from both the viewpoints of theory and application. It consists of eleven contributions by prominent authors from all over the world and an introductory chapter. This volume is strongly connected to another volume entitled "New Approaches in Intelligent Image Analysis" (Eds. Roumen Kountchev and Kazumi Nakamatsu).

The chapters of this volume are self-contained and include summary, conclusion and future works. Some of the chapters introduce specific case studies of various intelligent control systems and others focus on intelligent theory based control techniques with applications. A remarkable specificity of this volume is that three chapters are dealing with intelligent control based on paraconsistent logics.

This book is about the consequences of the Fukushima disaster in light

of their technological, societal, political, cultural and environmental origins. The magnitude of the nuclear accident is investigated in this book in the contexts of politics, economy, and society. The authors scrutinize the relationships between science, technology and society leading to this accident. Further, the authors reveal how these relationships were constructed historically. This book provides a case analysis on the Fukushima disaster in political, societal, economic and cultural dimensions. In addition, analyses for historically grown relationships between different societal spheres mouting into disasters are presented using examples of the Minamata disease (Mercury pollution), Itai-Itai Disease (Cadmium pollution), BSE, and GMOs. With this book, Yuko Fujigaki achieves to connect local and cultural peculiarities with generalized scientific information and practices in a coherent, logical fashion to a comprehensive volume on a very actual topic of global significance. In light of a globally increasing energy gap, this book has a distinct global relevance, providing an honest account on different triggers mouting into the nuclear disaster. This book not only gives a scientific account. It also can also contribute to prevent future disasters starting from similar vectors.

The United Nations Convention against Corruption includes 71 articles, and takes a notably comprehensive approach to the problem of corruption, as it addresses prevention, criminalization, international cooperation, and asset recovery. Since it came into force more than a decade ago, the Convention has attracted nearly universal participation by states. As a global and comprehensive convention, which establishes new rules in several areas of anti-corruption law and helps shape domestic laws and policies around the world, this treaty calls for scholarly study. This volume helps to fill a gap in existing academic literature by providing an invaluable reference work on the

Convention. It provides systematic coverage of the treaty, with each chapter discussing the relevant travaux préparatoires, the text of the final article, comparisons with other anti-corruption treaties, and available information about domestic implementing legislation and enforcement. This commentary is designed to serve as a reference work for academics, lawyers, and policy-makers working in the anti-corruption field, and in the fields of transnational criminal law and domestic criminal law. Contributors include anti-corruption experts, scholars, and legal practitioners from around the globe.
