However he defines his science, every psychologist talks and writes about selves--of myself and yourself--as conscious of people, of things, or of laws and formulae. The psychology of self, which this book sets forth, is a conscious adoption and scientific exposition of this natural and practically inevitable conception. In general, I have tried to make a simpler, more direct approach to the subject. In the earlier book, I treated psychology in a twofold fashion, both as science of selves and as science of ideas (or

'mental processes'), discussing all forms of consciousness from both points of view. I have here abandoned this double treatment, with the intent to simplify exposition, not because I doubt the validity of psychology as study of ideas, but because I question the significance and the adequacy, and deprecate the abstractness, of the science thus conceived. In a second fashion this book differs from the other. I have tried to embody what appear to me to be the important results of so-called functional psychology. That is to say, I have taken explicit account of the characteristic bodily reactions on environment which accompany perception, thought, emotion, and will; and I have briefly considered the various forms of consciousness as factors in conduct, and as significant in individual and in social development"--Preface. Real Science. Real Life. Deborah Beidel, Cynthia Bulik, and Melinda Stanley take a scientist-practitioner-educator approach and help students see and understand the connection between the science and practice of abnormal psychology. This leading-edge author team, consisting of three active researchers, clinicians, and educators, take a scientist-practitioner approach emphasizing the rich blend of both the science and practice of abnormal psychology throughout the text. The developmental trajectory of each condition is discussed where appropriate and scientific findings with respect to race and gender are incorporated into discussions about each condition. Biological findings are integrated with findings from social and behavioral sciences, highlighting the complexity of abnormal behavior and how it is often influenced by a wide range of variables. The authors encourage students to look at psychological disorders along a continuum and analyze disorders in terms of whether the individual's behavior creates distress or impairs daily functioning. Importantly, an effort is made to "bring to life" the nature of these conditions by providing vivid clinical descriptions. In addition to short descriptions used liberally throughout each chapter, a fully integrated case study is presented at the end of each chapter, again illustrating the interplay of biological, psychosocial and emotional factors.
