Inscribe a regular polygon of any number of sides (say  $n = 5$ ), in a circle. Draw the circle

with diameter AB. Divide AB in to “ $n$ ” equal parts Number them. With center A & B and radius AB, draw arcs to intersect at P. Draw line P2 and produce it to meet the circle at C. AC is the length of the side of the polygon.

that has at least one set of unequal sides.

### How to Construct Regular Polygons Using a Circle (with ...

1. Get an idea of what polygon you want to draw. There are many different types of polygons. Polygons are usually classified by the number of sides they have. For example, a pentagon has five sides, a hexagon has six, and an octagon has eight. Mathematicians use the term "n-gon" to refer to a polygon with "n" sides.

The sides of a regular polygon  
will be tangential to the circle  
drawn inside. The sum of the  
interior angles of a polygon is  
equal to  $(n - 2) \times 180^\circ$   
where n is the number of sides.  
The sum of exterior angles of a  
polygon is equal to  $360^\circ$  . The  
sum of the interior angle and
