This book is an indispensable guide to how to write articles, choose journals, and deal with revisions or rejection. Each chapter is written by a highly experienced journal editor - people who have actually made decisions on manuscripts and publication, as well as being eminent in their respective scientific field and written many articles themselves. It showcases parts of articles, discusses journal submission, outlines the resubmission process, and highlights systemic issues. Clear instructions are given on writing an empirical article, literature reviews, titles and abstracts, introductions, theories, hypotheses, methods and data analysis. Each part of the process is laid out from presenting results, to mapping-out a discussion and writing for referees. The integral skills of revising papers and ensuring a high impact are taught in 'article writing 101'. Whilst less intuitive knowledge is provided concerning publishing strategies, references, online submission, review systems, open access and ethical considerations.

The Booker Prize-winning author of Possession presents a stunning, contemporary story set against the clashing politics, passionate ideals, and shifting sexual roles of the early 1960s. In Byatt's vision, the presiding genius of the day seems to be a blend of the Marquis de Sade and The Hobbit. Peopled with weird and colorful characters, charted with brilliant, imaginative sympathy, Babel Tower is as comic as it is threatening and bizarre.

Meant as a companion to The ACS Style Guide, not a competitor, this book is an extraordinary resource for upper-level chemistry majors as well as graduate students faced with writing a journal article, a conference abstract, or a thesis. Full of prepared research projects and exercises, WriteLike a Chemist provides expert instruction ideal for students from diverse backgrounds, including both native and nonnative speakers of English. It is specifically designed to help students transition from the writing skills required in undergraduate lecture and laboratory classes to writing skills required by career chemists: a journal article, a scientific poster, and a research proposal. Each of these types of writing is directed towarda different audience, and writing for a journal requires a different writing style than writing a research proposal for the National Science Foundation. Thus to write like a chemist requires that one learns to write for different audiences. This book assists young scientists in developing thatessential writing skill.

In this book, Bonilla-Silva explores with systematic interview data the nature and components of post-civil rights racial ideology. Specifically, he documents the existence of a new suave and apparently non-racial racial ideology he labels color-blind racism. He suggests this ideology, anchored on the decontextualized, ahistorical, and abstract extension of liberalism to racial matters, has become the organizational matrix whites use to explain and account for racial matters in America.

Strategies for Getting Published Crown

Essentials of Scientific Writing: How to Write Effective Titles and Abstracts for Research Papers and Proposals is a belated entrant into a vast and crucially important area with scarce reference materials. This scarcity manifested itself as I searched what I had expected would be useful source materials for the present book. I skimmed through many textbooks on scientific writing and editing, articles on the Internet, and notes from courses on scientific writing. They all turned out to be manifestly wanting in both depth and scope. None extended beyond two pages, and most were hardly a page long, so they were largely useless for my purposes. To the authors knowledge, few published books treat the subjects of Titles and Abstracts in the kind of detail presented in this book. Accordingly, in developing the book, the author hoped to fill a void in the crucial area of facilitating sharing of knowledge and information from research work. It is my hope that everyone writing scientific work will endeavor to find space for the book on their shelves and will place it within arms length whenever they are writing or editing the title or abstract.

Its aim is to supply examples and brief discussions of recent work in all aspects of the area in short, sharp chapters. It should serve as a handbook for postgraduates and lecturers new to publishing. The book is written in a readable and lively personal style. The advice given is direct and based on up-to-date research that goes beyond that given in current textbooks. For example, the chapter on titles lists different kinds of titles and their purposes not discussed in other texts. The chapter on abstracts instructs the reader on writing structured abstracts from the start.
