'This extraordinarily lucid book demonstrates that women from all walks of life get the short end of the stick because of their gender. From welfare mothers to corporate executives, Albelda and Tilly show and why the powers-that-be benefit from scapegoating and marginalizing women.' Professor Mimi Abramowitz, author, *Regulating the Lives of Women* A cogent analysis of the economic and social realities for women in the United States, across class lines. In an age when the right wing manipulates the dialogue around women's issues to separate middle- and upper-class women from their poorer sisters this book's facts, figures, and analysis provide a much needed antidote.

“ Gripping, page-turning material . . . a new way of thinking about survival in a world filled with hazards and distractions. ” —Charles Duhigg, author of Smarter Faster Better and The Power of Habit A safety expert reveals why few of us are as careful as we think we are, and what we can do about it. As doctors and medical researchers work busily to extend our lives, more people each year are figuring out ways to cut them short. In fact, after a hundred years of steady decline, the rate at which people are being injured (or worse) in everyday accidents is increasing. Blame car crashes, pedestrian fatalities, home-improvement projects gone wrong, medical mistakes, home fires—not to mention all the crazy things that kids are into these days. And the problem seems to be spinning out of control. Steve Casner has devoted his career to studying the psychology of safety, and he knows there ’ s not a safety warning we won ’ t ignore or a foolproof device we can ’ t turn into an implement of disaster. Casner details the

psychological traps that prevent us from being more careful. They ' re the same whether you ' re a pilot, a Hollywood stuntwoman, a parent, or the owner of a clogged dishwasher you ' re trying to fix with a screwdriver. Then he shows us gripping real examples of how and when injuries happen, so we know exactly what we should really be worrying about. Careful arms readers with the latest science on how our sometimes fallible minds work, with countless takeaways to incorporate at home, at work, and everywhere in between. This book will help us keep our fingers attached in the kitchen, our kids afloat at the pool, and our teens safe behind the wheel, and demonstrates the many other ways we can maximize our chances of getting through the day in one piece.

The field of occupational health and safety constantly changes, especially as it pertains to biomedical research. New infectious hazards are of particular importance at nonhuman-primate facilities. For example, the discovery that B virus can be transmitted via a splash on a mucous membrane raises new concerns that must be addressed, as does the discovery of the Reston strain of Ebola virus in import quarantine facilities in the U.S. The risk of such infectious hazards is best managed through a flexible and comprehensive Occupational Health and Safety Program (OHSP) that can identify and mitigate potential hazards. Occupational Health and Safety in the Care and Use of Nonhuman Primates is intended as a reference for vivarium managers, veterinarians, researchers, safety professionals, and others who are involved in developing or implementing an OHSP that deals with

nonhuman primates. The book lists the important features of an OHSP and provides the tools necessary for informed decision-making in developing an optimal program that meets all particular institutional needs.
